- 12:15 pm RRT Awards (Co-Chairs)
- 12:30 pm Closing Remarks (Co-Chairs)
- 12:45 pm Adjourn
- 1:30 pm Oil and Ice Workshop Planning Meeting (OPTIONAL)

Oil In Ice Spill Cleanup, an initiative of the Great Lakes Oil Spill Response Exercise Workshop

Want to make an impact on a future environmental project?

On 6 May 2010 during the RRT Meeting, Milwaukee, WI a new initiative, “oil spill response in ice”, will be announced and a 2 hour planning meeting will be held that afternoon. The USCG Research and Development Center is heading up a project to identify current knowledge of oil cleanup in ice, based mainly on studies done for the Arctic and applying that knowledge to the Great Lakes. This project is being partially funded by the Great Lakes Restoration Initiative (GLRI). This is where we need YOUR help. We are trying to assemble approximately 30 Stake Holders to participate in a workshop tentatively scheduled for one day the week of 21 June to identify the gaps between responding to oil in Arctic conditions and Great Lake conditions. With your participation we will assemble subject matter experts who will collectively identify the gaps and help recommend the needed equipment, logistics, and procedures to be field tested in the Great Lakes in the future.

Please see LT. Ann Sparks to commit to attend the planning meeting or for further details.
