Appendix C	RCRIS Information
Appendix D	CERCLIS Information
Appendix E	Transportation Hazards – Highways
Appendix F	Population and Area Data
Appendix G	Sensitive Populations – Hospitals and Nursing Homes
Appendix H	Sensitive Populations – Schools
Appendix I	Sensitive Populations – Child Care Facilities
Appendix J	Reimbursement for Emergency Response

1.0 INTRODUCTION

1.1 SCOPE

The Red River Valley Sub-Area Contingency Plan has been prepared for six counties in eastern North Dakota, six counties in western Minnesota, and a portion of the Province of Manitoba, Canada. The counties in North Dakota include: Cass, Grand Forks, Pembina, Richland, Traill, and Walsh. The Minnesota counties include: Clay, Kittson, Marshall, Norman, Polk, and Wilkin. In Manitoba, Canada, the following towns and Rural Municipalities (RMs) are included in the scope: Town of Emerson, RM of Montcalm, RM of Morris, Town of Morris, RM of Ritchot, City of Winnipeg, RM of East St. Paul, RM of West St. Paul, RM of St. Clements, RM of St. Andrews, and City of Selkirk.

The Sub-Area Contingency Plan is provided in two parts, the Support Document and the Emergency Response Action Plan (ERAP). The Support Document provides information that should be helpful in planning to minimize the impact of an oil or hazardous material incident. It contains discussions of planning and response roles, hazards identification, vulnerability analysis, risk analysis, cleanup, cost recovery, training, and health and safety. The Emergency Response Action Plan is intended to be a “grab and run” document. It contains specific information on the incident command system, notifications, response capabilities, emergency response organizations, evacuation and shelter-in-place, immediate actions, and mapping.

1.2 PURPOSE

The Red River Valley Sub-Area Contingency Plan is designed to coordinate timely and effective responses by private industry, local and state officials, and various federal agencies to minimize damage resulting from releases of oil or hazardous materials into the environment. It is intended to describe how notification and response activities are coordinated in the area, especially for incidents involving multiple jurisdictions. The Plan outlines the type of cooperative activities that should be carried out during an oil or hazardous material incident response.

This Sub-Area Contingency Plan was prepared under the direction of the predesignated U.S. Environmental Protection Agency (EPA) Federal On-Scene Coordinator (OSC) in conjunction with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), Region V Area Contingency Plan (ACP), Regions V and VIII Regional Contingency Plans (RCPs), the Minnesota Emergency Operations Plan (MN EOP), North Dakota Emergency Operations Plan (ND EOP), the Manitoba Emergency Plan (MEP), and the applicable local contingency plans/emergency operations plans in Minnesota, North Dakota and Manitoba. The Plan has been developed with the cooperation of the participants listed in Appendix A.

In addition, this Plan intends to identify potential sources of oil and hazardous material releases, identify vulnerable environments and populations, and analyze the associated risks posed to the Red River Valley environment and populations.

To serve these functions, this Plan must be a current, evolving document. Responsibility for yearly updates rests with EPA, but the responsibility for timely notification of changes to information included in this Plan is the responsibility of each agency named therein. Proposed changes to this Plan may be made using the form found in Section 9.

1.3 STATUTORY AUTHORITY

This Plan is required by Section 311(j) of the Clean Water Act (CWA), as amended by the Oil Pollution Act of 1990 (OPA), 33 U.S.C. 1251 *et seq.*

This Plan is written as part of and in conjunction with the Region V ACP and RCP; the Region VIII RCP; the MEP (under the authority of the Emergency Measures Act, Section 6); the NCP (40 CFR Part 300); Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA), 42 U.S.C. 9601 *et seq.*, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA); and Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA, also known as SARA Title III), Public Law 99-499.

1.4 COORDINATED EMERGENCY RESPONSE PLANNING

Federal, state, local, and industry plans are available to supplement this Plan in the event of an oil or hazardous material incident. Federal plans include the NCP, the Federal Response Plan, and the Region V and VIII RCPs. State plans include the MN EOP and ND EOP. The Plan for the Province of Manitoba, Canada is the Manitoba Emergency Plan.

Each county in Minnesota is required to develop an all-hazards Plan. Local plans in North Dakota have been prepared by the Local Emergency Planning Committees (LEPCs) in Grand Forks, Pembina, and Walsh Counties as designated by the North Dakota State Emergency Response Commission (SERC). Each of the counties in the Sub-Area may use this Red River Sub-Area Plan as their oil and hazardous material emergency response Plan. Emergency Operations Plans are available for each of the participating towns, cities, and RMs in Manitoba. Emergency Response Plans are described in the following sections and are incorporated by reference into this Plan. Information on how to obtain copies of the documents is also included.

1.4.1 Federal Response Plan

The Federal Response Plan, developed under the Disaster Relief Act of 1974 as amended by the Stafford Disaster Relief Act of 1988, coordinates federal assistance to supplement state and local response efforts to save lives, protect public health and safety, and protect property in the event of a natural disaster, catastrophic earthquake, or other incident declared a major disaster by the President.

Released in April 1992. Information about the Plan may be obtained from the Federal Emergency Management Agency (FEMA), Region V, 175 W. Jackson Boulevard, 4th Floor, Chicago, IL 60604, or by calling FEMA at (312) 408-5500.

1.4.2 National Oil and Hazardous Substances Pollution Contingency Plan

The NCP provides for efficient, coordinated, and effective response to discharges of oil in accordance with the authorities of CWA. The NCP provides the organizational structure and procedures to prepare for and respond to discharges of oil and releases of hazardous substances (40 CFR Part 300).

Produced in September 1994. Information about the Plan may be obtained from the Emergency Response Division (5202G), U.S. Environmental Protection Agency, 401 M

Street SW, Washington, D.C. 20460, or by calling the Superfund Docket at (703) 603-5093 and requesting 40 CFR 300.

1.4.3 Canada-United States Joint Inland Pollution Contingency Plan

The Canada-United States Joint Inland Pollution Contingency Plan provides a cooperative mechanism for preparedness for and response to accidental spills and releases of pollutants that may cause damage along the shared boundaries of both countries that may constitute a threat to the public health, property, or welfare. The Plan was implemented in 1994 and was prepared by the Department of the Environment for Canada and EPA of the U.S. It provides an escalating system of problem solving from the Federal OSC to a Regional Joint Response Team to the International Joint Advisory Team.

To obtain more information about the Canada-U.S. Joint Inland Pollution Contingency Plan, contact the EPCRA hotline at 1-800-424-9346 and refer to document number ISBN 0-662-21604-0 (EPA 550-B-94-003 / EN40-11/32-1994E). This Plan may also be obtained on the Internet at: <<http://www.epa.gov/swercepp/pubs/jcpcan.pdf>>.

1.4.4 EPA Region V and Region VIII Regional Contingency Plans

The Region V and Region VIII Regional Response Teams (RRTs), comprised of representatives from state and federal emergency response agencies and natural resource trustees, developed the Region V and VIII RCPs, respectively. These plans were developed to coordinate timely, effective response by various federal and state agencies and other organizations to discharges of oil or releases of hazardous substances. The RCPs contain information on facilities and resources in the Regions from government, commercial, academic, and other sources. A description of the area covered by the Plans is included, as well as areas of special economic or environmental importance that might be negatively impacted by a discharge and for which protection is to be planned; descriptions of the responsibilities of owner/operators and government agencies in responding to a discharge; and a description of how the Plans are integrated into Facility Response Plans (FRPs) and other ACPs. The Region V RCP covers the states of Minnesota, Illinois, Indiana, Michigan, Ohio, and Wisconsin. The Region VIII RCP covers the states of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming. The RCP coordinates with state emergency response plans, the appropriate Region's ACP, and EPCRA local emergency response plans.

A Fish and Wildlife and Sensitive Areas Annex has been created in each region as an appendix to each of the Region V and VIII RCPs. The Annex provides identification of sensitive areas and detailed information on environmental and human-use resources for evaluating risk, establishing protection priorities, and planning mitigation strategies.

In Region V, an Inland ACP, first produced in 1994 and updated in January 1995, is designed to coordinate effective response planning within the region. This Plan contains information meant to augment the Region V RCP, which was first produced in July 1992. Region V intends to integrate the ACP and RCP into one document, which meets the NCP requirements for both types of plans. Requests for copies of these plans may be directed to: U.S. Environmental Protection Agency, Office of Superfund (SE-5J), 77 West Jackson Boulevard, Chicago, IL 60604 or the Region V Information Network World Wide Web site: <<http://www.great-lakes.net:2200/partners/EPA>>.

The Region VIII RCP was first published in 1990. A Region ACP was published as an annex to the RCP in 1993. In December 1999, a new Region VIII RCP was published and incorporates the original ACP. This new integrated RCP/ACP supersedes the previous plans in their entirety. Requests for copies of the RCP may be directed to: Preparedness, Assessment, and Emergency Response Program, U.S. Environmental Protection Agency, 999 18th Street, Suite 500, Mail Code 8EPR-SA, Denver, CO 80202-2405. The Region VIII Plan is available on the Internet at: <<http://www.nrt.org>>.

1.4.5 Manitoba Emergency Plan

The aim of the MEP is to provide a mechanism for ensuring a prompt and coordinated response by the Government of Manitoba to any emergency or disaster within provincial jurisdiction or in support of a municipality that has requested provincial assistance. The Plan is designed to provide direction and guidance, ranging from a single departmental response to the fully coordinated, collective emergency response of many or all departments. The Plan provides the basis for responding to any emergency regardless of the type or magnitude and describes the emergency response concept and structure. The Plan also delineates the respective responsibilities of local authorities, the province and its departments within the structure. Implementation of this Plan may be authorized by The Minister, The Deputy Minister, The Executive Coordinator, or persons designated to act on behalf of any of the above in their absence.

The MEP was enacted in May 1999. Requests for copies of the Plan may be directed to: Manitoba Emergency Management Organization (MEMO), 405 Broadway Avenue, 15th Floor, Winnipeg, Manitoba, Postal Code: R3C3L6. The MEP may also be obtained on the Internet at: <<http://www.gov.mb.ca/gx/memo/memoplan/toc.html>>.

1.4.6 Minnesota Emergency Operations Plan

The MN EOP is an all-hazard document intended to coordinate state government response to a major emergency/disaster. The Minnesota Department of Public Safety (MN DPS), Division of Emergency Management (MN DEM) has primary responsibility for the development and maintenance of the Plan. The MN EOP focuses on the assignment of emergency responsibilities to state agencies and on general emergency operations policies. The assignment of responsibilities is made relative to 14 key emergency functions. These are notification and warning, fire protection, incident management, evacuation/traffic control/security, public information, mass care, accident/damage assessment, debris clearance, search and rescue, public works and utilities restoration, health protection, environmental hazard response, medical services, and resource management.

The MN EOP details the proper procedures for emergency operations as required at the state level. The Plan does not describe the emergency responsibilities of federal government agencies, local government agencies, or voluntary organizations, but does reference the relationship between these entities and state government. MNEOP is meant to integrate the planning procedures that are described in the local, municipal and county plans and it can be used in conjunction with the Sub-Area to further understand the manner in which the emergency responsibilities interrelate at each level.

Information regarding the MN EOP may be obtained by contacting the Department of Public Safety, Division of Emergency Management, 444 Cedar Street, Suite 223, St. Paul, Minnesota 55101. The Plan may also be obtained on the Internet at:

<http://www.dem.state.mn.us>.

1.4.7 North Dakota Emergency Operations Plan

The ND EOP is an all-hazard document intended to coordinate state government response to a major emergency/disaster. The Plan focuses on the assignment of emergency responsibilities to state agencies and on general emergency operations. The assignment of responsibilities is made relative to 10 key emergency functions. These are administration, coordination and control, damage assessment, communications, warning, individual and family assistance, public safety, public works and engineering, transportation, and health and medical.

The ND EOP specifies state government response and recovery policies and procedures dealing with a potential or actual emergency or disaster. The state will supplement the capabilities of local governments when the situation exceeds the capacity of the local government to provide an adequate response. If the situation exceeds the capabilities of the state, the state will request assistance from the federal government. The ND EOP integrates the planning procedures that are described in the local, municipal and county plans and can be used in conjunction with the Sub-Area Contingency Plan. The ND EOP was prepared by the North Dakota Division of Emergency Management (ND DEM) in conjunction with more than 40 state agencies.

Information regarding this Plan may be obtained by contacting the Plans and Mitigation Manager, ND DEM at P.O. Box 5511, Bismarck, ND, 58506-5511.

1.4.8 Minnesota - County Emergency Hazardous Materials Plans

The Minnesota counties in the Sub-Area are required to maintain emergency operations plans that detail response procedures, agency roles, resources, and training for public response agencies. The primary focus of these plans is protection of the public's safety and property. The MN EOP is a prototype for the county plans. The plans are divided into different functions necessary for emergency response, including: notification and warning requirements; direction and control procedures; public information provision; search and rescue procedures; health and medical responsibilities; evacuation, traffic control, and security procedures; fire protection, damage assessment; congregate care; debris clearance; utilities restoration; and radiological and hazardous materials protection. The county plans specifically address the relationship between city, county, and state response capabilities for natural and technological disasters. Resource manuals containing personnel and equipment lists for responding to and recovering from a major incident accompany the local plans. A County All-Hazards Plan is available in all six counties in Minnesota included in this Sub-Area.

Information regarding county emergency response plans may be obtained directly from the counties themselves by contacting the county Emergency Management Directors (EMDs) listed below:

- Clay County - 218-299-5002
- Kittson County - 218-843-2113
- Marshall County - 218-745-5841
- Norman County - 218-784-5493

- Polk County - 218-281-0437
- Wilkin County - 218-643-8119

Several cities and municipalities within the counties have prepared their own hazardous materials plans. In Clay County, the following municipalities have developed plans: Moorhead, Barnesville, Glyndon, and Hawley. The city of Hallock in Kittson County has developed an emergency Plan. The cities of Crookston and East Grand Forks in Polk County have developed emergency plans.

Regional Review Committee

In Minnesota, counties are encompassed by region in emergency planning districts. These districts were designated by the Minnesota SERC pursuant to SARA Title III. Each emergency planning district has an assigned Regional Review Committee (RRC) comprised of up to nine members, with three representatives each from regulated facilities, first responders, and the community. These committees review the hazardous materials portions of local government emergency plans within the district. The review is designed to provide suggestions and feedback to emergency planners on the completeness of the Plan and any connections to other emergency plans that the Plan may need. In the Red River Valley Sub-Area, the counties in northwest Minnesota are encompassed by one RRC, headed by a single chairperson who reports to the SERC.

1.4.9 North Dakota - County Emergency Hazardous Materials Plans

In the six counties in North Dakota included in this Sub-Area, Grand Forks, Pembina, Walsh County LEPCs have developed County emergency hazardous materials plans. Grand Forks County has produced a "Grand Forks County Hazardous Materials Plan" in addition to a Capability Study, Communication Study, Flow Study, and a Regional Response Team Needs Analysis. Pembina County has produced a "Hazardous Materials Response Guide" for the county in addition to a "Situation Assessment" Report for the ND DEM. Walsh County has produced a "Walsh County-Wide Emergency Operations Plan" for the county in addition to a "Situation Assessment" for the ND DEM. These plans generally outline policies and procedures to be used in the response to uncontrolled releases of hazardous substances in each county. The plans describe the responsibilities and authorities of local government officials and agencies, notifications, and specific response actions to hazardous materials incidents.

Information regarding county emergency response plans may be obtained directly from the individual county:

- Grand Forks County LEPC - 701-780-8213
- Pembina County LEPC - 701-265-4849
- Walsh County LEPC - 701-352-2311

Local Emergency Planning Committees

The LEPC is a group of local representatives appointed by the SERC to prepare a comprehensive emergency Plan for the local emergency planning district and carry out all requirements of SARA Title III. Among their responsibilities are: to develop an emergency Plan to prepare for and respond to chemical emergencies; to receive and keep track of hazardous chemical inventories submitted by local facilities; to make information available

to the public; and to serve as a focal point in the community for information related to emergency preparedness for chemical emergencies.

1.4.10 Manitoba - Local Emergency Plans

Towns and Rural Municipalities in Manitoba along the Red River have developed Emergency Plans for their communities. These plans are designed to provide guidance for the respective community to respond to an emergency. The aim of the Emergency Plans is to prevent or limit: the loss of life; harm or damage to the safety, health or welfare of people; damage to property or the environment; and to restore essential services. There are 11 local Emergency Plans that cover the Towns and RMs along the Red River to its mouth at Lake Winnipeg, north of Winnipeg, Manitoba (listed below). The plans generally include information in detail on the following subjects: declaration of a state of local emergency; warning; evacuation and re-entry; reception; resources; transportation, utilities, and resources; mutual aid arrangements; action guidelines; public information and telecommunications; and position responsibilities. The plans are typically reviewed annually and updated as necessary. More detailed information regarding the specific plans available for an area can be obtained from the appropriate local contact listed below.

- Town of Emerson - Fire Chief, 204-373-2002 or 204-427-2076
- Rural Municipality of Montcalm - Emergency Coordinator, 204-737-2082
- Rural Municipality of Morris - Chief Administrative Officer, 204-746-2642 or Emergency Coordinator, 204-746-8605
- Town of Morris - Emergency Coordinator, 204-746-8870
- Rural Municipality of Ritchot - Emergency Coordinator, 204-883-2293
- City of Winnipeg - Emergency Coordinator, 204-986-4691 or Administrative Assistant, 204-986-4692
- Rural Municipality of East St. Paul - Emergency Coordinator, 204-663-3978 or Administrative Officer, 204-668-8112
- Rural Municipality of West St. Paul - Emergency Coordinator, 204-338-0306
- Rural Municipality of St. Clements - Emergency Coordinator, 204-339-2001
- Rural Municipality of St. Andrews - Emergency Coordinator, 204-738-2264
- City of Selkirk - Emergency Coordinator - 204-785-4900

1.4.11 Facility Response Plans

Facilities from which a discharge of oil could reasonably be expected to cause substantial harm to the environment must prepare an FRP. FRPs, required under OPA Section 311(j)(5), address employee and physical plant issues, as well as the interface with public response entities and the safety of the neighboring resources and populations. The FRP is collocated with the facility's existing Spill Prevention, Control and Countermeasure (SPCC) Plan, and serves as a complete reference tool during spill responses. FRPs must be consistent with local, state, and federal government contingency plans and must identify response personnel and equipment to be used to mitigate a worst-case discharge of oil to the surrounding environment.

Facilities within the Red River Valley Sub-Area that have submitted FRPs to EPA are listed in Section 4.1.6 of this Plan. For facilities in Minnesota, FRPs may be obtained through EPA Region V in Chicago, Illinois. For the facilities in North Dakota, FRPs may be obtained through EPA Region VIII in Denver, Colorado.

Response plans are also required for transportation-related onshore facilities under 33 CFR Part 154; for pipeline facilities under 49 CFR Part 194; and for rolling stock under 49 CFR Part 106 et al.

1.4.12 “The Next Flood: Getting Prepared”

“The Next Flood: Getting Prepared,” April 2000, is a Final Report of the International Red River Basin Task Force to the International Joint Commission (IJC). The report was generated after the floods of 1997 that occurred in the Red River basin. The governments of Canada and the United States asked the IJC to investigate the causes and effects of the flooding and to recommend ways to reduce the impact of major floods. To assist it with this bi-national investigation, the IJC appointed an International Red River Basin Task Force. The Task Force, comprised of members from a variety of backgrounds in public policy and water resources management, provided advice to the IJC on matters identified in the letters from Governments. The Governments asked the IJC to examine a full range of management options, including structural measures (such as building design and construction, basin storage, ring dykes, etc.) and non-structural measures (such as floodplain management, flood forecasting, emergency preparedness and response, etc.) and to identify opportunities for enhancement in preparedness and response that could be addressed to improve flood management in the future.

The IJC Report recommends a minimum of a 1- in 500-year level of flood protection, or no hazardous materials to be stored in an area that would fall below a 1- in 500-year event level.

In the report, the Task Force explores the implications associated with large floods--that is, floods of the magnitude of 1997 or larger--for the people, communities, and governments in the Red River basin. It responds to the concerns of the public and experts about the preparation needed to avoid or reduce damage from large floods. The report also discusses issues of particular concern arising from the 1997 flood. While the Task Force studied some aspects of response and recovery issues, this report focuses on preparedness and mitigation for major floods. The report may be obtained from the IJC Internet at: <http://www.ijc.org/boards/rbtf.html>.

1.4.13 Cross-Border Understanding for Cross-Border Response

The Immigration and Naturalization Service cannot establish a blanket entry Memorandum of Understanding (MOU) to allow non-government responders to cross the border without prior approval. However, in the event of an emergency, a Canadian Immigration Officer and American Immigration Officer could be contacted and requested to meet at the Point of Entry to expedite clearance of non-government emergency response personnel.

In the event an expedited entry to the U.S. or Canada is necessary, response personnel should contact the following U.S. and/or Canadian Agencies:

- National Response Center (U.S., Environmental Protection): 800-424-8802
- U.S. Environmental Protection Agency, Region 5 (Chicago, Illinois): 312-353-2318

- U.S. Environmental Protection Agency, Region 8 (Denver, Colorado): 303-293-1788
- Manitoba Emergency Management Organization: 204-945-5555
- Manitoba Conservation: 204-944-4888

2.0 DESCRIPTION OF THE RED RIVER VALLEY SUB-AREA

For the purposes of this Plan, the scope of the Red River Valley Sub-Area is a multi-county, multi-state, and multi-national plan that covers portions of North Dakota in EPA Region VIII, portions of Minnesota in EPA Region V, and portions of Manitoba, Canada. The counties in eastern North Dakota include: Cass, Grand Forks, Pembina, Richland, Traill, and Walsh. The counties in western Minnesota include: Clay, Kittson, Marshall, Norman, Polk, and Wilkin. In Manitoba, Canada, the following towns and Rural Municipalities (RMs) are included in the scope of the Red River Valley Sub-Area Plan: Town of Emerson, RM of Montcalm, RM of Morris, Town of Morris, RM of Ritchot, City of Winnipeg, RM of East St. Paul, RM of West St. Paul, RM of St. Clements, RM of St. Andrews, and City of Selkirk. The Town of Emerson, Manitoba is a Port of Entry into Canada from the United States.

The Sub-Area contains the following federal and state managed lands in North Dakota: Sheyenne National Grassland; Ardoch, Lake Elsie, Tewaukon, Little Goose, and Kellys Slough National Wildlife Refuges (NWRs); Tetrault Woods State Forest; Federal Waterfowl Production Areas (WPAs); Icelandic, Fort Abercrombie, and Turtle River State Parks; and State Wildlife Management Areas (WMAs). In Minnesota, the Sub-Area contains the following federal and state managed lands: Agassiz and Rydell NWRs; Federal WPAs; Buffalo River, Lake Bronson, and Old Mill State Parks; State WMAs; State Scientific and Natural Areas; State Fish Management Areas; and The Nature Conservancy Lands. In Manitoba, St. Norbert Provincial Park and Netley Creek Provincial Park are located along the Red River within the Sub-Area and Oak Hammock Marsh is located partially in the RM of St. Andrews. Refer to Appendix F in the ERAP for a complete listing of state, Provincially, and federally managed lands.

One Indian Reservation falls partially within the Red River Valley Sub-Area. The Sisseton-Wahpeton Sioux Tribe of the Lake Traverse Indian Reservation is primarily located in South Dakota and partially in North Dakota, including a small portion of the southwest corner of Richland County, ND. The White Earth Indian Reservation in Minnesota is located adjacent to Norman County and south of Polk County but is not within the Red River Sub-Area.

Cass, Grand Forks, Pembina, Richland, Traill, and Walsh Counties in North Dakota encompass approximately 7,461 square miles. In Minnesota, Clay, Kittson, Marshall, Norman, Polk, and Wilkin Counties encompass 7,601 square miles (U.S. Bureau of the Census 1990). The relatively small topographic relief of about 1,600 feet and gently rolling hills and plains in the Red River basin were largely caused by the actions of glaciation and geologically recent erosion. Land-surface altitudes in the basin range from about 2,350 feet in the extreme western part of the Red River basin to about 750 feet where the Red River crosses the international boundary.

The Red River of the North basin is located near the geographic center of the North American continent. The river flows north and drains parts of the states of Minnesota, North Dakota, and South Dakota, as well as parts of the Provinces of Manitoba and Saskatchewan, Canada. The area is characterized as glaciated plain with moraines, lakes, wetlands, and lake plains. The Red River of the North is a navigable waterway and begins at the confluence of the Bois de Sioux and the Otter Tail Rivers and meanders northward for 394 miles. Most of the people in the Sub-Area rely on surface water supply services for drinking water. Drinking water quality and safety is an important and useful feature of the Red River Valley Sub-Area Contingency Plan to people in the valley.

For detailed information on the environmental setting of the Red River of the North, a good resource is the "Red River of the North Basin, Minnesota, North Dakota, and South Dakota," by Jeffrey D. Stoner, David L. Lorenz, Gregg J. Wiche, and Robert M. Goldstein, published in the Water Resources Bulletin. The Journal of the American Water Resources Association, August 1993. Additionally, The Minnesota Pollution Control Agency (MPCA) published the "Red River Basin Information Document" in 1997 that provides a comprehensive look at water resources of the Red River and basin management efforts being implemented to protect water quality resources. Information contained in the Information Document may be found on the MPCA website at <<http://www.pca.state.mn.us>>.

3.0 RESPONSE OPERATIONS AND ROLES

In the United States, all emergency response actions and hazardous waste operations must be carried out according to the Occupational Safety and Health Act (OSHA) and/or EPA worker protection standards (29 CFR 1910.120 and 40 CFR 311, respectively). OSHA regulations apply directly to private and federal employees. **The same OSHA regulations apply indirectly to state and local government employees (compensated or non-compensated)** through the provisions of 40 CFR 311. Therefore, agencies and individuals involved in the roles described below must be in compliance with OSHA requirements, including training requirements.

An effective response to an oil or hazardous material release may require cooperation between any combination of industrial, local, state, and federal entities. The National Contingency Plan states that the Incident Command System (ICS) will be used for all oil and hazardous materials emergency responses. This section briefly describes the ICS and describes the response roles of local, state, and federal agencies in support of the local Incident Commander (IC) and/or State or Federal On-Scene Coordinator (SOSC/OSC). The ICS is fully described in the ERAP part of this Sub-Area Contingency Plan.

The NCP specifies the priorities to be followed during a response effort. Safety of human life is the highest priority during every response action. Stabilizing the situation to preclude the event from worsening is the next priority. Stabilizing the situation includes securing the source of the spill and/or removing the remaining product from the container (vessel, tank, pipeline) to prevent additional oil and/or hazardous material spillage, to reduce the need for follow-up response action, and to minimize the adverse impact to the environment.

The response effort must coordinate all necessary containment and removal tactics to ensure a timely, effective response that minimizes adverse impact to the environment. All parts of the national response strategy should be addressed concurrently, but safety and stabilization are the highest priority. The priorities set forth in the NCP are broad in nature, and should not be interpreted to preclude the consideration of other priorities that may arise on a site-specific basis.

In the Province of Manitoba, Canada, all emergency response actions and hazardous waste operations are carried out according to “The Dangerous Goods Handling and Transportation Act (D-12 CCSM),” “The Environment Act (E-125 CCSM),” and “The Workplace Safety and Health Act (W-210 CCSM).”

In the Province of Manitoba, Canada, the Site Management system is implemented during response to an incident to coordinate all response efforts. The Site Management system is similar to the ICS with a few minor differences. The Site Management system would be implemented during an emergency, under the direction of an Emergency Site Manager. The Emergency Site Manager manages a group of emergency response teams or organizations that are participating in a response. In Manitoba, the police and fire departments have adopted the Incident Command System to respond to specific types of incidents. However, in a major emergency that would involve multiple jurisdictions, the Incident Commander would provide recommendations and information to the Emergency Site Manager who is responsible for overall coordination of site activities.

3.1 RESPONSE ROLES

This section describes the designation of emergency response roles and authorities for incidents involving the release of oil or hazardous materials in North Dakota and Minnesota. For a description of Response Roles in the Province of Manitoba, Canada, refer to Section 3.7.

Response actions should be monitored or implemented by the lowest level of government with authority and capability to conduct such activities. The lowest level will generally be local government agencies. When required, the state will assist with additional resources. When incident response is totally or partially beyond the capability of state response, the state may request the assistance of EPA and the Federal OSC will evaluate the need for federal response action. Additionally, in the absence of a state or local request for assistance, EPA is authorized by the President of the United States to take response measures deemed necessary to protect the public health or welfare and environment from discharges of oil or releases of hazardous substances, pollutants, or contaminants.

Notification of an oil discharge or release of a hazardous substance in an amount equal to or greater than the reportable quantity must be made immediately by the responsible party in accordance with the CWA and CERCLA (33 CFR Part 153 Subpart B and 40 CFR Part 302, respectively). All reports of discharges and releases shall be made to the National Response Center (NRC) at 1-800-424-8802. If direct contact with Federal OSC is needed, reports may be made to the appropriate EPA Region (Region V: 312-353-2318; Region VIII: 303-293-1788). Reports of incidents in Minnesota should be made to the Minnesota Duty Officer at 800-422-0798 (Greater Minnesota) or 651-649-5451 (Metro Minnesota). The Minnesota Duty Officer coordinates contact to the appropriate state and federal agencies. All spills reported to EPA will be promptly relayed to the NRC. In accordance with CERCLA and the NCP, all federal agencies are responsible for reporting releases of oil or hazardous substances from facilities that are under their jurisdiction, custody, or control. Notification to the NRC on private land is the responsibility of the responsible party, but local or state agencies may also provide notification. The NRC notifies the Federal OSC, who ensures notification of the affected state, the National Response Team (NRT), RRT, natural resource trustees, and tribal agencies. A notification flow chart and notification form for Minnesota, North Dakota, and Manitoba are provided in the ERAP.

It is the policy in North Dakota and Minnesota that the first emergency response authority to arrive at the scene of an incident shall be responsible for the emergency response; except that, subsequent to the emergency response, continuing responsibility shall be exercised by the emergency response authority with jurisdiction. As used in this Plan, "emergency response to a hazardous substance incident" means taking the initial emergency action necessary to minimize the effects of the incident.

If the incident occurs on:

Private Land or Transportation Right-of-Way - The owner or operator thereof may undertake the emergency response to such hazardous substance incident and shall notify and coordinate such response with the appropriate emergency response authority. If the owner or operator of the property does not undertake such emergency response, or if in the judgment of the local emergency response authority there exists an imminent danger to the public health and safety beyond such property, this local emergency response authority shall be responsible for the emergency response to such incident. The local emergency response authority in each county in Minnesota is the Emergency Management Director, and is the Emergency Manager in North Dakota counties. A list of the Emergency Management Directors and Emergency Managers and their phone numbers is provided below.

Emergency Management Directors in Minnesota

- | | |
|----------------------------------|---------------------------------|
| • Clay County – 218-299-5002 | • Kittson County – 218-843-2113 |
| • Marshall County – 218-745-5841 | • Norman County – 218-784-5493 |
| • Polk County – 218-281-0437 | • Wilkin County – 218-643-8119 |

Emergency Managers in North Dakota

- Cass County – 701-241-5812
- Grand Forks County – 701-780-8213
- Pembina County – 701-265-4849
- Richland County – 701-642-7788
- Traill County – 701-436-4510
- Walsh County – 701-352-2311

Public Lands - Response to hazardous material and oil incidents on state and federally administered lands should also be handled at the lowest possible governmental level. The agency with jurisdiction will coordinate the non-emergency responses or may request EPA to coordinate the response. The Federal OSC may be requested to provide technical assistance to the lead agency at any time. In the event of an emergency, EPA retains response authority and the OSC will ensure that timely and appropriate response takes place. If the incident is of a location and/or magnitude such that significant natural resources are threatened, EPA may respond to the incident. If a non-emergency hazardous materials incident occurs on federal property, response and cleanup is the lead agency's responsibility; however, it is anticipated that normal operating procedure will involve coordination with local and state authorities. If the Responsible Party (RP) or Potentially Responsible Party (PRP) is known, they can or may be held liable for all response, cleanup, and remediation costs, and the accomplishment of all phases shall comply with state requirements and standards.

The U.S. Department of the Interior (DOI) Regional Environmental Officer, Office of Environmental Policy and Compliance, should be notified and kept advised of any significant spills or releases on DOI administered lands (Region V: 215-597-5378; Region VIII: 303-445-2500). U.S. Department of Agriculture (USDA) should be kept advised of any significant spills or releases on USDA-administered lands.

3.2 RESPONSIBLE PARTY

The RP is defined as the individual, agency, or company responsible for causing the spill or release. Legally, the RP is financially accountable and liable for actions necessary to abate and mitigate any adverse environmental and human health affects resulting from a spill or release of hazardous substances. The RP is also responsible for notification to the NRC, containment and cleanup of the spill or release, disposal of contaminated debris, restoration of the environment, and compensation for damages.

Sometimes the RP is unknown, fails to respond, or responds in a manner that is considered to be inadequate. In such cases, the local, state, or federal agency having jurisdiction must exercise its authority to assume control of the response effort. If the RP is available but unable to respond or the response is inadequate, the RP is required by law to cooperate with and assist the responding governmental agencies.

Following the termination of the emergency response, the RP is required by law to take steps to prevent the recurrence of spills or releases. Corrective actions may include improved planning, increased inspections, or the implementation of physical preventative measures.

3.3 LOCAL JURISDICTIONS

Local agencies may provide the initial Incident Command and establish a command post. The local agency may also establish a Unified Command with other government agencies, depending upon the extent of the incident. Local agencies may consist of local fire, law enforcement, emergency operations groups, emergency medical services (EMS), public works, and health departments. The local police and fire agencies operate under various Mutual Aid Agreements (MAAs) or

Memorandums of Understanding (MOUs) for united response to major incidents. The protocols of command and communications are set forth in these agreements. These agreements are typically more effective as written agreements rather than verbal. Agreements may also be established between counties within the same state, between counties in North Dakota and Minnesota, or between counties and municipalities in the U.S. states and Manitoba, Canada, respectively. Please refer to specific county hazardous materials plans and/or contact the county Emergency Manager for MAAs or MOUs that have been established in an area.

In general, these local agencies may provide: IC, appropriate initial notifications; initial hazard identification and incident assessments; an Incident Command Post or Unified Command Post; site security, by isolating the scene and restricting entry; search and rescue functions; emergency medical care, including the decontamination of exposed persons; fire fighting or other defensive actions; communications equipment; on-scene liaison with other parties; public information statements; and protective actions, such as evacuation or sheltering-in-place. Refer to the ERAP for detailed information regarding specific agency capabilities. All responders must be trained for the assigned task according to OSHA regulations (49 CFR 1910.120).

3.4 STATE GOVERNMENT

The state government provides assistance for hazardous material and oil spill incidents when requested by local governments. State assistance is intended to supplement the response capabilities of local agencies. The state is primarily in an advisory role; however, the state may activate a hazardous material response team, if available, to assist the IC when necessary. The capabilities and responsibilities of Minnesota and North Dakota are described below in Sections 3.4.1 and 3.4.2, respectively.

The state RRT representatives are responsible to ensure the following actions are completed, as appropriate: Notify downstream water users (municipal, industrial, and agricultural) of all discharges and releases that may pose a threat to the water supply; notify and coordinate with other state and local agencies, including other state natural resource trustees, as appropriate; and take responsibility, in conjunction with the EPA representative, for selection of disposal sites, arranging for use of disposal sites, selecting transportation routes to disposal sites, making arrangements with the SERC to provide security for all on-scene forces and equipment, assisting EPA with the determination of the degree of hazard of the discharge, and operating a site, if necessary and when no RP or PRP has been identified.

3.4.1 State of Minnesota

In Minnesota, requests for state assistance are routed through the Minnesota Duty Officer (through the Division of Emergency Management) at 800-422-0798 (Greater Minnesota) or 651-649-5451 (Metro Minnesota). The role of state agencies that may provide assistance include:

- Minnesota Department of Public Safety – The MN DPS has several responsibilities during an emergency. These responsibilities are delegated to the various divisions within Public Safety. The MN DEM maintains the 24-hour Minnesota Duty Officer system for the communication of emergency notifications to state and local governments, organizes assistance from other state agencies, and activates the Emergency Operating Center and field offices in the event of an emergency. The Director of the MN DEM serves as the State Coordinating Officer and the

Governor's Authorized Representative for all Presidentially declared emergencies. The MN DEM also coordinates damage assessment information, organizes long-term disaster recovery efforts, and coordinates local government emergency planning and compliance review of emergency operations plans. The division will also manage administrative tasks for the Hazardous Materials Regional Response Teams and coordinate emergency training.

The Emergency Response Commission (ERC) provides emergency response personnel with access to hazardous chemical storage information, provides technical guidance to political subdivisions, and reviews EPCRA elements contained in local government emergency operations plans. The Office of Public Information provides emergency public information support following the occurrence of a disaster. The State Fire Marshal Division assists local governments in fire protection planning and fire operations training, supports the MN DEM in the responses to hazardous materials incidents, and coordinates operational tasks associated with the Hazardous Materials Regional Response Teams.

The State Patrol Division is responsible for law enforcement and traffic control, National Warning System communication assistance, Capitol Complex Security Division assistance, and the provision of personnel to operate the radio console in the state Emergency Operating Center, if necessary. This division will also assist the MN DEM in the responses to hazardous materials incidents. The Office of Pipeline Safety will assist the MN DEM in the responses to hazardous materials incidents.

- Minnesota Pollution Control Agency – By the Governor's Executive Order the MPCA is the lead agency for state response to most oil and hazardous substance incidents. For agricultural chemical incidents, the Department of Agriculture is the lead agency. The person responsible for coordinating state staff and state concerns during the response is generally a staff member of the MPCA Emergency Response Unit. This person is called either the SOSC or the State Oversight Commander. During a major incident, the SOSC will generally fit into the ICS. The SOSC oversees the RP's operations during a response. The SOSC will evaluate the RP's plans, and will have the authority to approve or deny a variety of specific actions. The SOSC will monitor cleanup progress by the RP, and evaluate cleanup results for adequacy of environmental protection.
- Regional Hazmat Response Teams - The state of Minnesota has Regional Hazardous Material Response Teams (RHMRT) and Regional State Chemical Assessment Teams strategically located around the state. The RHMRT consists of nine highly trained personnel equipped to provide a Level A response to most incidents, upon the request of local authorities. The Chemical Assessment Team is a three-person team, highly trained in hazardous materials response and equipped to provide the local authority with a rapid assessment of the situation. The Chemical Assessment Teams are the first line of defense in assisting local authorities with technical decision making. The Chemical Assessment Teams carry computers, computer modeling equipment, portable weather stations, gas detection equipment, chemical reference books, and a complete decontamination station. RHMRT and Chemical Assessment Teams are dispatched to a hazardous materials incident by the Minnesota State Duty Officer, upon the request of local officials on the scene,

or by the Commissioner of Public Safety. Once on the scene, the RHMRT or Chemical Assessment Teams will operate under the Minnesota Incident Management System (MIMS), within a hazardous materials branch, which will report directly, back to the operations chief or the Incident Commander. The RHMRTs do not have the authority to take command and control of the incident. Their mission is to support local authorities by providing technical assistance and hazardous materials mitigation as necessary. The Response Teams are prohibited from conducting remedial clean up of a hazardous materials incident.

3.4.2 State of North Dakota

In North Dakota, requests for state assistance may be made through ND DEM; if required, the Governor may then declare an emergency or disaster and available state resources will be utilized as necessary. State government emergency or disaster operations will be guided by the ND EOP, which is comprised of the Basic Document and 10 Functional Annexes. The functional annexes contain procedures, policies and reference material from the state departments and agencies to include hazard specific incident response procedures. ND DEM coordinates efforts of 47 state agencies and departments and are assigned tasks and responsibilities in the 10 functional annexes. Additionally, Task Coordinators are responsible for coordinating specific tasks within each functional annex and may provide on-scene technical assistance. The task coordinators may be made of other state agencies not specifically listed below. The Functional Coordinators are listed below with their corresponding functional annexes (10 annexes appear in italics) and the primary purpose of each annex.

- Governor, Adjutant General, Emergency Management - ***Coordination and Control Annex:*** To provide for coordination and control of state resources during emergency or disaster operations.
- Emergency Management - ***Administration Annex:*** To provide a system for managing legal, fiscal, economic and administrative matters associated with emergency and disaster situations.
- Emergency Management - ***Damage Assessment Annex:*** To provide a system for assessing private and public property damage resulting from emergency or disaster situations.
- State Radio - ***Communications Annex:*** To provide a communications network for receiving and transmitting emergency or disaster information among all levels of government.
- State Radio - ***Warning Annex:*** To establish procedures and provide a network for dissemination of emergency and disaster warnings.
- Department of Health - ***Health and Medical Annex:*** To coordinate health, environmental and medical support during an emergency or disaster situation.
- Department of Human Services - ***Individual and Family Assistance Annex:*** To provide emergency or disaster victims with services necessary to meet basic and special human needs.

- Highway Patrol - **Public Safety**: To provide for the protection of life and property and the maintenance of law and order during emergency or disaster situations.
- State Water Commission - **Public Works and Engineering Annex**: To provide a coordinated effort for maintenance, replacement and/or repair of engineering and public works facilities and services during an emergency or disaster situation.
- Department of Transportation - **Transportation Annex**: To provide a coordinated effort for maintenance, replacement and/or repair of transportation facilities and services during an emergency or disaster situation.

The SERC serves as the administering body for the North Dakota Hazardous Chemicals Preparedness and Response Program. The Director of ND DEM serves as the Chairman of the SERC. The SERC is responsible to provide coordination and oversight to the LEPCs. Additionally, the SERC is responsible to provide planning, training, exercising and operational support to LEPCs. The SERC provides: technical assistance, planning guidance, plan evaluation, training and exercise assistance; information on potential sources of funding for LEPC activities; computerized information management assistance; contact with statewide and national industry groups that can provide technical information; workshops that focus on EPCRA issues; data on chemicals stored or being transported through planning districts; and outreach information for the public about EPCRA.

In North Dakota, each county has been designated as a planning district. The LEPC in each district is required to develop and maintain a hazardous chemicals emergency response Plan for the district using information from facilities required to report under the “Right-to-Know” section of EPCRA. If a facility has a response Plan of its own, appropriate information from it should be incorporated into the LEPC Plan. The Emergency Manager of each county is a member of the LEPC and is responsible to coordinate local emergency planning and operational response activities regarding all hazards (including hazardous materials). Neither the Emergency Manager nor LEPC direct the actual response. That is almost always a fire department or law enforcement responsibility.

3.5 FEDERAL GOVERNMENT

In the event of an oil and/or hazardous substances incident, the primary role of federal agencies is to assist and support the Federal OSC, and through them, the activities of local and state responders. If requested by the state or under the authority delegated by the President of the United States, EPA may direct the response. Federal agencies will coordinate through the Region V or VIII RRT (depending on the states involved, i.e., Minnesota or North Dakota) with affected local and state governments and private entities. Federal agencies will make facilities and resources available to the Federal OSC consistent with agency responsibilities and authorities.

The federal government may respond to an incident in various ways depending on the nature and magnitude of the incident. Most oil and hazardous material incidents are handled completely at the local and/or state level and federal involvement will merely be the assessment of the situation by the Federal OSC. In a larger scale incident, EPA may determine the need to respond to the incident and provide the IC with assistance. In the event the President declares a national disaster, the FEMA will coordinate the assistance of the resources of the federal government. In any case where a natural resource is injured or threatened, the natural resource trustees will provide additional assistance and provide advice regarding response priorities. Specific federal agency roles and responsibilities are

outlined in detail in the NCP, the Federal Response Plan, and the Region V and Region VIII RCPs, and a summary is provided in this Plan (see also Section 1.4).

3.5.1 Role of the Federal On-Scene Coordinator

The Federal OSC is the primary federal official, pre-designated by the President, for inland areas during a National Response System emergency response. The Federal OSC coordinates all federal containment, removal, and disposal efforts and resources during an incident response financed under Superfund. The Federal OSC is also the point-of-contact for the coordination of federal efforts with those of the state and local response community, and informs the appropriate RRT (Region V or Region VIII, depending on the Region providing the OSC) of the incident. Pre-designated Federal OSCs are listed in each of the Region's RCPs.

In the event of a discharge or a release, the Federal OSC has the following responsibilities: the Federal OSC is responsible for assuring appropriate response actions, and may respond to the incident and coordinate response activities as directed by the NCP and agency guidance, and will ensure that the required notifications have been made. The Federal OSC will gather all information pertinent to the discharge or release. This includes information about the source and cause, potentially responsible parties, physical data (nature, amount, location, direction, time, etc.), pathways to human and environmental exposure, potential human and environmental impact, potential impact on property, priorities for protecting humans and the environment, and estimated costs for the response.

The Federal OSC shall consult with superiors regarding situations that may require temporary or permanent relocation of citizens. In the event that the President declares a federal disaster, the Federal OSC shall coordinate with the FEMA's Federal Coordinating Officer and shall implement community relations activities to keep the public informed. The Federal OSC shall address health and safety issues for response workers prior to and during an incident response in order to ensure the safety of all federal and contracted response personnel.

The President has delegated authority to EPA to respond to an oil or hazardous material incident that poses a threat to the public health or welfare or environment for inland areas. EPA will respond to an oil or hazardous material incident when requested by the state or when the Federal OSC deems it necessary to protect the public health or welfare or environment from discharges of oil or hazardous materials. EPA can provide a variety of resources to complement those of state, local, and private entities, but is not a first responder and cannot respond on site to every spill, but can always offer technical assistance. EPA resources include oil and hazardous substance spill response, air monitoring equipment, radiological monitoring equipment, level "A" through "D" entry teams, air, water, and soil sampling, spill containment/remediation, technical assistance, and response to nuclear, biological, and chemical incidents. EPA can also provide the following preparedness assistance: chemical and oil spill emergency planning; risk analysis; emergency response training; exercise development and support; specialized software; reporting information; SARA Title III and first responder training; risk management plans; chemical safety audits; and counterterrorism assistance. The NCP describes the authority and specific responsibilities of EPA for response to certain oil and hazardous materials incidents. Regions V and VIII Federal OSCs have many tools available during an emergency, including Radiological Assistance Teams (RATs), U.S. Coast Guard (USCG) Public

Information Assist Team (PIAT), the National Pollution Funds Center (NPFC), and the Environmental Emergency Response Unit (EERU). Additional resources include:

- Environmental Response Team of EPA (ERT) - Provides expertise in treatment, technology, biology, chemistry, hydrology, geology, and engineering.
- Occupational Safety and Health Administration (OSHA) - Conducts safety and health inspections of hazardous material sites to ensure that employees are being protected, determines compliance with its regulations, and provides the Federal OSC and other agencies with advice, guidance, and assistance regarding hazards to persons involved in removal or control of oil or chemical spills.
- National Strike Force Coordinating Center (NSFCC) - The NSFCC maintains response equipment inventories and logistic networks, and conducts a national exercise program. The NSFCC can also technical assistance, equipment, coordination of resources, ACP review, coordination of pollution response exercises, and inspection of district response equipment.
- USCG Pacific Strike Team (PST) - Provides trained personnel and specialized equipment to assist the Region VIII Federal OSC in training for spill response, stabilizing and containing the discharge or release, and in monitoring and assisting in the response action.
- USCG Atlantic Strike Team (AST) - Provides trained personnel and specialized equipment to assist the Region V Federal OSC in training for spill response, stabilizing and containing the discharge or release, and in monitoring and assisting in the response action.
- Superfund Technical Assessment and Response Team (START) - Provides technical expertise for the response to and investigation of oil and hazardous substances incidents. The team has personnel trained in health and safety, multimedia field monitoring and sampling, incident documentation, cost monitoring, cleanup and restoration, and disposal techniques during oil and hazardous substances incidents.
- Emergency and Rapid Response Services Contractor (ERRS) - Provides trained personnel and equipment to control, stabilize, clean up, and subcontract transportation and disposal during oil and hazardous material incidents.

Additional consulting and cleanup services are available to EPA from the U.S. Army Corps of Engineers (USACE) and the U.S. Bureau of Reclamation (BOR) through Interagency Agreements. During the response to any discharge, the Federal OSC may request advice or support from the Special Teams, RRT agencies, and any local support units identified by the Sub-Area Committee.

3.5.2 Regional Response Team

The Region V and VIII RRTs maintain the Region V and VIII RCPs, respectively, and have state and tribal as well as federal government representation. The members of the Region V RRT include representatives of EPA, USCG, USDA, U.S. Department of Commerce

(DOC), U.S. Department of Defense (DOD), U.S. Department of Energy (DOE), U.S. Department of Labor (DOL), U.S. Department of Justice (DOJ), U.S. Department of the Interior (DOI), General Services Administration (GSA), FEMA, Health and Human Services (HHS), Nuclear Regulatory Commission, U.S. Department of State (DOS), Department of Transportation (DOT), and the states of Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin. The members of the Region VIII RRT include representatives of EPA, DOC, DOD, DOE, DOI, DOL, FEMA, HHS, the Three Affiliated Tribes, USCG, USDA, and the states of Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

The RRT is the regional mechanism for pre-response planning and preparedness activities, as well as for coordination of technical assistance and advice to the Federal OSC. The RRT standing team provides communications and procedures, planning, coordination, training, evaluation of responses, preparedness and related matters on a region wide basis. The incident-specific team is formed from the standing team and performs the following functions: monitors and evaluates reports from the Federal OSC; provides advice to and recommends a course of action for the Federal OSC; advises the Federal OSC on the duration and extent of a federal response and recommends specific actions to respond to a discharge or release; requests resources from other federal, state, or local government agencies or from private sector organizations under their existing authorities to respond to a discharge or release or to monitor response operations; co-chairs, if circumstances warrant (for example, substantial movement of the pollution into the pre-designated area of another Federal OSC lead agency); and ensures continuous communications with the NRC as significant developments occur. The Federal OSC or any RRT member may request immediate activation of the RRT.

3.5.3 National Response Team

National planning and coordination is accomplished through the NRT. The NRT consists of representatives from the USCG, EPA, DOD, DOE, USDA, DOC, HHS, DOI, DOJ, DOL, DOT, DOS, GSA, and the Nuclear Regulatory Commission.

When an oil discharge exceeds the response capability of the region in which it occurs, transects regional boundaries, or involves a substantial threat to the public health or welfare, substantial amounts of property, or substantial threats to the environment, the NRT will be activated as an emergency response team. This is an extraordinarily rare event. The NRT coordinates national preparedness to respond to a major discharge of oil that is beyond regional capabilities and is the national communications center for handling activities related to response actions.

3.6 STATE, FEDERAL, AND TRIBAL NATURAL RESOURCE TRUSTEES

Impacts to natural resources can be minimized through proper planning and coordination with federal and state natural resource trustees both before and during a spill. Consultation and coordination with trustees and other natural resource managers during the pre-spill planning phase are essential in identifying and understanding potential natural resource concerns and issues that may arise as a result of a spill. Consultation and coordination during a spill response are also essential to ensure that site-specific resource concerns are addressed. Following a spill, natural resource trustees may have the additional responsibility of assessing injury to the environment through the Natural Resource Damage Assessment (NRDA) process. Initiation of the NRDA is typically begun during emergency response activities. Because the NRDA activities may be similar to those

conducted as part of the response, all sampling and fieldwork conducted by the natural resource trustees should be coordinated with the lead response agency, and vice versa.

Specific emergency response responsibilities of federal and state natural resource trustees in the Red River Valley Sub-Area are described in the following sections.

3.6.1 State of Minnesota

- **Minnesota Department of Natural Resources**

The Minnesota Department of Natural Resources (MN DNR) is co-trustee with the MPCA for the natural resources of the state of Minnesota, as declared by the Governor, and co-trustee with the U.S Fish and Wildlife Service (USFWS) concerning the management of migratory waterfowl, federally-listed species occurring in Minnesota, as well as for those State resources occurring on National Wildlife Refuge System (NWRS) lands. The MN DNR is charged with control of all public lands, parks, timber, waters, minerals, and wildlife of the state. This includes the protection, preservation, and propagation of the fish and wildlife of the state.

In response to a spill event, MN DNR personnel (conservation officers, biologists, and managers) have the following responsibilities: notify all necessary MN DNR personnel and establish a response protocol describing the role of responders; coordinate effort with other responding trustees such as MPCA and the USFWS; provide responders with specific fish and wildlife habitat information within the Sub-Area concerning all lakes, streams, wetlands, and rivers.

The MN DNR will also consult with the responders as to the best locations for staging and recovery areas as well as access points; provide responders with critical habitat information for state-listed threatened and endangered species as well as information on sensitive natural communities and special concern species found in the Sub-Area; provide responders with technical assistance and expertise on potential effects of oil and hazardous substances on fish and wildlife and their habitats; coordinate wildlife rescue and rehabilitation efforts in cooperation with the USFWS; assess damages to natural resources during (as circumstances allow) and after a spill. Data acquired would be used to determine the extent of damage to natural resources, to develop restoration or replacement strategies, and to develop and submit a claim for damages to the Responsible Party.

3.6.2 State of North Dakota

- **North Dakota Department of Health**

The State Health Officer of the North Dakota Department of Health (ND DoH) is the natural resource trustee for the state of North Dakota and is the regulatory authority for environmental issues. The ND DoH acts on behalf of the public as trustee for natural resources.

3.6.3 U.S. Department of the Interior

Under Executive Order 12580 and Sec. 300.600 (b) of the NCP, the Secretary of the Interior is designated as trustee for natural resources managed and controlled by the following DOI Bureaus.

- U.S. Fish and Wildlife Service

The USFWS is responsible for management of NWRS lands, migratory birds, and federally listed endangered and threatened species within the Red River Valley Sub-Area. When a spill occurs, USFWS will provide timely advice on the measures necessary to protect these resources from exposure, including the priority and timing of such measures. Protective measures may include preventing the oil from reaching areas where these resources are located or deterring birds or their prey base from entering areas by using wildlife hazing devices or other methods.

If exposure of birds and other wildlife to oil or hazardous substances cannot be prevented, an immediate decision would be required as to whether to rescue and rehabilitate "oiled" birds and other wildlife. The USFWS has statutory responsibilities for protecting migratory birds and federally listed threatened and endangered species. In such cases, the USFWS would serve as the lead, coordinating with other wildlife management agencies and providing oversight for a qualified wildlife responder. If an incident does not involve migratory birds or federally listed threatened or endangered species, the appropriate State wildlife management agency would serve as lead. **The decision to rescue and rehabilitate oiled wildlife must be made in consultation with the applicable state and federal natural resource management agencies, since state and federal permits are required by law. Any wildlife rescue and rehabilitation will be directed by the state wildlife management agency and the USFWS.**

Detailed information on procedures, permit requirements, and appropriate contacts are provided in Annex XII (Fish and Wildlife and Sensitive Environments) of the Region VIII RCP and the Region V RCP.

- Bureau of Indian Affairs

The Bureau of Indian Affairs (BIA) may assist in coordination of activities affecting Indian lands, and in identifying Indian Tribal government officials. They will assist in obtaining access to Indian land areas as needed for response action, and will coordinate with the incident Public Information Office Director to ensure that pertinent information is made available to Tribal authorities on a timely basis.

Should it be necessary to initiate NRDA activities, the DOI may serve as Federal Lead Administrative Trustee for purposes of accessing the OSLTF on behalf of all Natural Resources Trustees, in accordance with Section 6002(b) of the Oil Pollution Act, Sec. 7(A)(1)(B) of E.O. 12777, and National Pollution Funds Center procedures. Because NRDA activities may be identical to those conducted as part of the response, all sampling and fieldwork conducted by DOI/USFWS will be coordinated with the lead response agency.

3.6.4 Sisseton-Wahpeton Sioux Tribe

One Indian Reservation falls partially within the Red River Valley Sub-Area. The Sisseton-Wahpeton Sioux Tribe of the Lake Traverse Indian Reservation is primarily located in South Dakota and partially in North Dakota, including a small portion of the southwest corner of Richland County, North Dakota. The Tribe functions as a natural resource trustee within the Lake Traverse Reservation and may bring claims regarding natural resource damages within this area.

3.7 MANITOBA PROVINCIAL GOVERNMENT

3.7.1 Local Response

Initially the local authority will respond to the emergency using its first responders following normal operating procedures. When it becomes evident that the emergency is of a more serious nature and additional actions, resources and coordination are necessary, the local authority may implement its emergency response Plan to meet these requirements. This may include any of the following actions: convening the Emergency Control Group; requesting mutual aid from neighboring municipalities; appointing an Emergency Site Manager; activating the Emergency Operations Center; and declaring a state of local emergency.

If the local authority requires additional support it may request assistance from the provincial government and, through the Province of Manitoba, the resources of the federal government.

- Local Authority - The local authority is responsible for activating and providing ongoing control and coordination of the emergency response within its jurisdiction.
- Local Authority Responders - Local authority responders operate from the emergency site under the direction of the emergency site manager with the objectives of minimizing impacts to persons, property, and the environment. Local responders may be augmented, at the request of the local authority, by responders from neighboring communities and by necessary provincial or federal government departments.
- Emergency Site Manager - The Emergency Site Manager has primary responsibility for directing and coordinating emergency activities within the boundaries of the emergency site. This position reports to and requests resources from the local Emergency Operation Center.
- Emergency Operations Center - The Emergency Operations Center contains the necessary staff, amenities, and communications equipment for the central coordination of the local emergency response and support to the emergency site. Local departments with a major role may activate their own emergency operations centers to coordinate their departments' activities and resources.
- Emergency Operations Control Group - In a major emergency the Emergency Operations Control Group may be convened. This group is comprised of elected

and other designated officials from the local authority and provides general direction and senior level decision making to the emergency operation.

Mutual Aid arrangements are emergency services arrangements between the town of Emerson and other communities who are willing to respond with aid in an emergency. This excludes Fire Mutual Aid agreements. It is best to have these arrangements made before an emergency occurs. The Mutual Aid arrangements established with the town of Emerson include 1) Rural Municipality of Franklin; 2) Rural Municipality of Montcalm; and 3) Town of Altona.

3.7.2 Provincial/Federal Support

- For minor emergencies the normal means of operation of the provincial government and its departments will be sufficient to meet the need for supporting the response efforts of the local authority.
- If the magnitude of the event requires a more substantial provincial response, the province may activate those components of the response necessary to ensure that the provincial support to the local authority is carried out in an effective and coordinated manner. This may include: supplying provincial emergency response personnel, equipment and other resources; declaration of state of emergency; deploying an Emergency Preparedness Advisor and/or, a provincial Site Coordinator to provide advice and assistance to the community coordinating the emergency response effort; activation of the Manitoba Emergency Coordination Center; convening the Central Task Team; and requesting the assistance of the federal government including the Canadian Armed Forces.
- Depending on the magnitude of the event, senior levels of the provincial government including the Deputy Ministers Committee and the Ministers Advisory Committee may be convened to provide senior level decision making support to the management of provincial operations.
- Provincial On-Site Responders - At the request of the local authority to the Executive Coordinator, or in circumstances where the province has jurisdiction, provincial departments may be required to supply personnel, equipment and other resources to the emergency site to augment the resources of the local authority.
- Provincial Site Coordinator - The Provincial Site Coordinator manages and coordinates the response of those provincial agencies working at the emergency site. The Coordinator works closely with the Emergency Site Manager to ensure that the necessary support is being provided effectively.
- Emergency Preparedness Advisors - Emergency Preparedness Advisors may be required in an emergency to liaison with and assist local authorities in the implementation of their emergency response plans. Emergency Preparedness Advisors will be provided by the MEMO, however other departments may be requested to provide staff from their field or central office staff at/or near the location of the emergency.

- Manitoba Emergency Coordination Center (MECC) - The Center will normally be established in the offices of MEMO. The MECC will contain the facilities and communications for management and coordination of the emergency response. Representatives from departments will staff the MECC during an emergency.
- Central Task Team (CTT) - The CTT, chaired by the Executive Coordinator, will be comprised of the departments involved in the emergency. It may include federal or other agency representatives as necessary. The CTT may be assembled by the Executive Coordinator before, during, or after an emergency or disaster.
- Deputy Minister - The Deputy Minister of Government Services, when required, will convene and chair a Deputy Ministers Committee to provide information and recommendations to, and implement direction from the Minister.
- Deputy Minister's Committee - The Deputy Minister may convene and chair a Deputy Minister's Committee comprised of the Clerk of the Executive Council and the Deputy Ministers of departments involved in the emergency. At the direction of the chair, the Executive Coordinator and the Director of Communication Services (CH&C) may attend committee meetings. The Committee will inform, advise and make recommendations to the Minister with respect to the provincial and municipal emergency response. It will implement the direction of the Minister and provide direction to the departments and the response organization.
- Minister - The Minister is responsible for the Emergency Measures Act and provides direction to the overall emergency response. When necessary, the Minister will advise and consult with the Minister's Advisory Committee and other officials.
- Minister's Advisory Committee - This committee, chaired by the Minister, will be comprised of the departments involved in the emergency. The committee will inform, advise and make recommendations to the Minister on matters relating to the emergency response.
- Manitoba Emergency Management Organization (MEMO) – The MEMO is responsible for: providing assistance to local authorities and provincial departments in the implementation of emergency plans; alerting provincial departments and agencies likely to be involved in the emergency; coordinating the provincial emergency response; dispatching the Emergency Preparedness Advisor to the affected community; activating and operating the Emergency Mobile Command Center and the MECC; requesting emergency response assistance to the Government of Canada and/or the Canadian Forces; compiling the provincial post-emergency report; and other post-disaster activities.
- Provincial Departments - Other provincial departments that may be involved in an emergency response include: Agriculture; Civil Service Commission; Culture, Heritage and Citizenship; Education and Training; Energy and Mines; Environment; Family Services; Finance; Government Services; Health; Highways and Transportation; Housing; Justice; Labor; Manitoba Hydro; Natural Resources; and Rural Development.

4.0 HAZARDS IDENTIFICATION

The types, quantities, and locations of oil and hazardous material present in the Red River Valley Sub-Area will be identified here to facilitate planning for response to releases of those substances. The focus of this hazards identification is on those facilities that have reportable quantities of extremely hazardous substances (EHSs). EHSs are chemicals identified by EPA on the basis of acute toxicity (40 CFR Part 355; Summary of EHSs provided in Appendix A of the ERAP). Other hazardous materials stored above threshold inventory reporting quantities are also identified. Hazardous waste facilities, and facilities that routinely release regulated toxic chemicals are included. Major transportation routes (highways and railroads) and pipelines will be included as potential locations of hazardous materials.

4.1 FIXED FACILITY HAZARDS

Hazards are posed by facilities that store hazardous materials and wastes, by abandoned facilities, and by oil and gas wells. The following sections describe the fixed facility hazards in Minnesota, North Dakota, and Manitoba.

4.1.1 Facilities with Reportable Quantities of Hazardous Materials

Reporting facilities in Minnesota and North Dakota that store hazardous materials (including oil) above the threshold reporting quantities are listed in Appendix B of this Support Document. It is likely that some facilities that are required to submit Tier II forms will fail to do so; therefore, there may be some chemicals and facilities that will not be presented in this analysis.

Chemical names of all of the EHSs stored at the facilities submitting Tier II forms, their chemical formulas, and Immediately Dangerous to Life and Health (IDLH) values are summarized in the table in Appendix A in the ERAP. There are 31 EHSs stored at facilities within the Red River Valley Sub-Area.

Vulnerable zones are those areas that could potentially be affected by releases of hazardous materials created by the EHS fixed facilities. Vulnerable zones are modeled using Computer-Aided Management and Emergency Operations (CAMEO) Windows Version 1.1 and Areal Locations of Hazardous Atmospheres (ALOHA) Windows Version 5.2.1 software. A worst-case release and a credible-case release were modeled for each EHS and the results were reported as a vulnerable zone radius, shown in Appendix A of the ERAP.

For ALOHA computer modeling of the worst-case release hazards, the following assumptions were made: the maximum storage quantity was released; liquids were stored at, or below, ambient temperature; the total quantity of the substance was released in one minute; wind speed was 3.4 miles per hour and the atmospheric stability was F (most stable); terrain was flat, level, and unobstructed; and the level of concern (LOC) was one-tenth the IDLH value (when the IDLH data is not available, the threshold limit value-ceiling (TLV-C) will be used). For CAMEO computer modeling, the same assumptions were made except the total quantity of the substance was released in ten minutes for gas or in one minute for a liquid, the concentration of the chemical will be assumed to be 100%; wind speed was 3.35 miles per hour and the atmospheric stability was F (most stable). The credible release hazard was calculated using a release quantity equal to one-half the amount used for the worst-case or the maximum storage capacity of one vessel, a wind speed of seven miles per hour, and a release duration of sixty minutes (except liquid, which will

remain at a one-minute release duration). The air stability was reduced to D stability, which is more typical. All other parameters remained the same. The results of the hazardous zone calculations for all EHSs stored at the identified fixed facilities are provided in Appendix A of the ERAP. If the hazardous zone radius of a given incident was greater than ten miles, limitations of CAMEO prevented the model from predicting its size; the model stated only that the hazardous zone was greater than ten miles. The modeling scenarios fail to take storage configurations into account.

The IJC Report recommends a minimum of a 1- in 500-year level of flood protection, or no hazardous materials to be stored in an area that would fall below a 1- in 500-year event level.

4.1.2 Hazardous Waste Facilities

Information was obtained from EPA's Resource Conservation and Recovery Information System (RCRIS), which lists hazardous waste notifiers in the Red River Valley Sub-Area (Appendix C of this Support Document). This database may be accessed online through EPA's Envirofacts Warehouse web site at <www.epa.gov/enviro/html/rcris/rcris_query_java.html>. The RCRIS Notifiers list classifies these notifiers as either generators; transporters; treatment, storage, and disposal facilities; burner/blenders; or recyclers of hazardous wastes.

In Minnesota, the following number of RCRIS Notifiers were identified (by county): 147 in Clay County; 33 in Kittson County; 55 in Marshall County; 35 in Norman County; 112 in Polk County; 8 in Traverse County, and 27 in Wilkin County. In North Dakota, the following number of RCRIS Notifiers were identified (by county): 72 in Cass County; 32 in Grand Forks County; 4 in Pembina County; 10 in Richland County; 2 in Traill County; and 2 in Walsh County. Please note that the North Dakota RCRIS list in Appendix C does not contain very small generators.

The RM of Montcalm provided a list of facilities that store or handle hazardous products. The facility name, location, and the products stored or handled at the facility are listed below:

- Parent Seed Farm, St. Joseph - Seed treatment chemicals, 2 - 2,000 gallon tanks of diesel, and 1 -300 gallon tank of gasoline, propane.
- St. Joseph Co-op, St. Joseph - Farm chemicals, 2 - 12,500 gallon tanks of gasoline, 1 - 5,000 gallon tank of diesel.
- Simplot Soilbuilders, Letellier - Farm chemicals.
- Agricore-Red River South, Letellier - Product listing not provided.
- Miller Environmental, RM of Montcalm (Hwy. 14) - Radioactive material, hazardous waste, explosive waste.
- Roy Legumex, St. Jean Baptiste - Product listing not provided.

This list is not comprehensive of the facilities that may be present in the RMs and Towns in Manitoba included in the Red River Valley Sub-Area. For a listing, summary, or more detailed information regarding additional facilities located in Manitoba within the Sub-Area, contact the appropriate RM or Towns' Emergency Coordinator.

4.1.3 Abandoned Facilities (CERCLA Sites)

EPA maintains the CERCLA Information System (CERCLIS) database. The CERCLIS system tracks information on all Superfund sites -- both the most hazardous (the National Priorities List) and those where cleanup is easier or less urgent. Data from other federal agencies' sites (Federal Facilities) are also included.

Appendix D of this Support Document lists the CERCLA sites identified in the Red River Valley Sub-Area. In Minnesota, there is one CERCLA site identified in Polk County and none were identified in Clay, Kittson, Marshall, Norman, or Wilkin Counties. In North Dakota, the following number of CERCLA sites were identified (by county): 8 in Cass County; 8 in Grand Forks County; 2 in Pembina County; 2 in Richland County; 1 in Traill County; and 3 in Walsh County. The listing of CERCLA sites in Appendix D identifies those sites that are either active or inactive and those sites that require remediation, have been remediated, or do not require remediation.

4.1.4 Active Oil and Gas Wells

There is no oil and gas production within the Red River Valley Sub-Area.

4.1.5 SPCC Facilities

There are numerous facilities in Minnesota and North Dakota within the Red River Valley Sub-Area that are SPCC-subject facilities, indicating they have the capacity to store oil in aboveground storage tanks in quantities greater than 660 gallons in one tank or 1,350 gallons total. SPCC subject facilities are required to prepare an SPCC Plan to plan, prepare for, and prevent discharges of oil from facilities into or upon the navigable waters of the United States or adjoining shorelines. These facilities are not subject to self-reporting but are required to keep SPCC plans on-site at the subject facility.

4.1.6 FRP Facilities

Facilities from which a discharge of oil could reasonably be expected to cause substantial harm to the environment must prepare an FRP. In the Red River Valley Sub-Area, there are two facilities in Minnesota and six facilities in North Dakota that have submitted FRPs (see Section 1.4.11 for detailed information regarding Facility Response Plans). Contact information, including phone numbers and addresses, is available for each of these facilities in Appendix A of the ERAP.

Minnesota:

- Crookston Asphalt Terminal, Murphy Oil Company, Crookston, Polk County
- Moorhead Terminal, Amoco Oil Company, Moorhead, Clay County

North Dakota:

- Defense Fuel Support Point, Grand Forks, Grand Forks County
- Grand Forks Air Force Base, Grand Forks, Grand Forks County
- Grand Forks Asphalt Terminal, CENEX, Grand Forks, Grand Forks County
- North America Oil Feed Processing Facility, Cargill, Inc., West Fargo, Cass County

- Williams Pipeline, Williams Pipeline Company, Grand Forks, Grand Forks County
- Williams Pipeline, Williams Pipeline Company, West Fargo, Cass County

There are several facilities in Minnesota that possess extremely hazardous materials and have developed and maintained emergency response plans as specified in 29 CFR 1910.120, or emergency action plans as specified in 29 CFR 1910.38(a). These facilities are listed below. Contact information, including phone numbers and locations, is available for each of these facilities in Appendix A of the ERAP. There are likely other facilities that have developed plans and have not submitted them to the county or there may be facilities that are required to develop a Plan that have not yet done so.

- Clay County: Farmland Industries - Ammonia Terminal; Harvest States, Baker; Cenex/Land O'Lakes, Comstock; Peavey Company, Barnesville; Cenex/Land O'Lakes, Glyndon; and Hawley Co-op Elevator, Hawley.
- Kittson County: Agsco, Hallock; Cenex/Land O'Lakes, Hallock; Cenex/Land O'Lakes, Humboldt; Farmers Union Oil Co. - Anhydrous Plant, Lake Bronson; Farmers Union Oil Co. - Fertilizer Plant, Lake Bronson; Farmers Union Oil Co. - Anhydrous Plant, Karlstad; Humboldt St. Vincent Elevator, Humboldt; and Humboldt St. Vincent Elevator, St. Vincent.
- Marshall County: Cenex Chemical Depot, Oslo; Farmers Union Oil Company, Oslo; Cenex Oil Company, Argyle; and Harvest States, Warren.
- Norman County: Ada Co-op Oil; Ada Feed and Seed; Flom-Ulen Co-op Oil Association; Twin Valley Co-op Oil Company; and Halstad Elevator.

Facilities that store large quantities of listed chemicals that could be released to the air must prepare a Risk Management Plan as required under 40 CFR Part 68. The facilities that have prepared and submitted Risk Management Plans to EPA are listed in Appendix B.

4.1.7 Radioactive Facilities

There are no identified radioactive facilities in Minnesota, North Dakota, or Manitoba, Canada within the Red River Valley Sub-Area. However, several facilities in North Dakota may have limited quantities of radioactive materials on site such as:

- Hospitals and clinics;
- Academic and research facilities (universities and colleges);
- State and local transportation departments;
- Materials-testing consultants; and
- Federal facilities.

This list is not meant to be all-inclusive, as there may be other facilities with limited or exempted quantities of radioactive materials on site.

4.2 TRANSPORTATION HAZARDS

Various modes of transportation including highways, railroads, pipelines, and air travel are utilized for the shipment of hazardous materials through the Red River Valley Sub-Area. Each of these hazards is outlined below. Several flow studies have been conducted by different agencies on the shipment of hazardous materials through the Red River Valley via highway, railroad, pipeline, and air traffic. The results and conclusions of these studies are summarized in the appropriate sections below.

4.2.1 Primary Highways

Several major highways pass through the Red River Valley Sub-Area and serve as primary truck routes for hazardous material shipments. U.S. Interstates, U.S. Highways, and State Highways that pass through the Minnesota and North Dakota counties, and Provincial Highway and Trans-Canadian Highways that pass through the areas in Manitoba are included in the Sub-Area. The listing of primary highways is provided in Appendix E of this Support Document and includes the counties that are passed through and their primary direction (e.g., north-south, east-west). There are no designated hazardous materials transportation corridors established by the U.S. Department of Transportation in the Sub-Area in Minnesota or North Dakota. The town of Emerson, Manitoba is a Point of Entry into Canada from the United States via Provincial Highway 75 which travels primarily north-south along the west side of the Red River (Provincial Highway 75 becomes Interstate 29 in the U.S.).

The Pembina County (North Dakota) Emergency Management Office developed a "1996 Hazardous Materials Highway Flow Study of Pembina County," to show the types of hazardous materials and their estimated quantities that are commonly stored or pass through Pembina County. The most prevalent material carried via highway was gasoline followed by asphalt, diesel fuel, and aviation fuel. Other materials carried in limited quantities included propane, waste oil, paint, carbon dioxide, ammonium nitrate, sulfuric acid, waste batteries, and urea.

The Grand Forks County LEPC, through the Grand Forks County Emergency Management Office, conducted a flow study of hazardous materials in Grand Forks County, North Dakota (1994-1995). The flow study covered all aspects of transportation including highway, rail, air, and navigable waterways. Data tabulated in the report is for Grand Forks County, ND, however, can be assumed to be a representative picture of material that is transported through the surrounding counties. Hazardous materials shipments via highway in Grand Forks County were surveyed at various locations on Interstate Highway 29, U.S. Highway 2, State Highways 15 and 18, and County Roads 1 and 2. This placard survey showed that approximately 84.81% of the materials transported were flammable liquids followed by the shipment of miscellaneous hazardous materials (4.93%), radioactive materials (4.14%), and flammable solids (3.35%). Limited quantities of other materials transported during the survey included poisons, explosives, and gases.

4.2.2 Railroads

Several different Railroads conduct operations in the Red River Valley Sub-Area. Railroads that operate within the Sub-Area and appropriate contact information are listed in Appendix D of the ERAP. There are no designated hazardous materials transportation corridors

established by the U.S. Department of Transportation in Minnesota or North Dakota within the Sub-Area. The hazardous zones were modeled for the primary rail routes using the EHSs reported to be carried by the railroads. The results are provided in a table in Appendix D of the ERAP.

Burlington Northern Santa Fe (BNSF) Railway Co. has compiled a traffic flow summary of hazardous materials shipments transported by BNSF in 1999. BNSF supplied information for five counties in Minnesota (Clay, Kittson, Polk, Traverse, and Wilkin) and five counties in North Dakota (Grand Forks, Pembina, Richland, Traill, and Walsh). The data from the traffic flow report are summarized in the "Extremely Hazardous Substances (EHS)-Listed Summary Tables" in Appendix D of the ERAP. Included in these tables are the hazardous materials and car counts that were carried by BNSF over their rail lines in the above-listed counties in North Dakota and Minnesota during 1999.

The "1996 Hazardous Materials Highway Flow Study of Pembina County" assessed the types of hazardous materials and their estimated quantities that are commonly stored or pass through the county via rail. This study identified two railroads that operate within or adjacent to the county: BNSF and Canadian Pacific Railways (traverses Kittson County, MN). According to the study, Canadian Pacific estimated its monthly amount of rail cars containing hazardous solid materials to be approximately 45 cars per month (in 1996) through Kittson County, MN. Each car had a maximum solid load of approximately 263,000 pounds. Liquid material was estimated at approximately 1,189 rail cars per month (in 1996), resulting in roughly 35.7 million gallons of liquid hazardous material being transported by rail each month. Common materials (solid and liquid) transported included: molten sulphur, anhydrous ammonia, inhibited styrene monomer, isobutane, butane or LPG, methanol, fuel oil, and ammonium nitrate fertilizer.

The Grand Forks County LEPC performed a hazardous materials flow study in 1995 (see detailed description in Section 4.2.1, Primary Highways) of shipments via railroad in Grand Forks County. The two cargo railroads that pass through Grand Forks County are BNSF and Canadian Pacific Railway. The survey showed that shipments of hazardous materials included the following products: gases (71.28%), other (10.04%), flammable liquid (5.62%), corrosives (4.94%), miscellaneous hazardous materials (3.91%), oxidizers (3.73%), flammable solids (<1%), poisons (<1%), and explosives (<1%).

Two railroads pass through the Sub-Area in Manitoba and include Canadian Pacific (CP) Railways and Southern Manitoba Railway.

4.2.3 Pipelines

Numerous pipelines traverse the Red River Valley Sub-Area. A complete listing of pipelines, the product carried through the pipeline, primary direction, and name and phone number of the company that owns the pipeline is provided in Appendix E of the ERAP. For detailed information regarding pipeline/river crossings, rail markers, and locations, please see the response maps provided the Inland Sensitivity Atlas for the Red River of the North. Additionally, local contact information for pipeline companies with pipelines in Minnesota is detailed in the County-wide EOPs.

There are no pipelines that travel through the Town of Emerson, Manitoba. However, the nearest pipeline to Emerson is the Lakehead Pipeline (three crude oil lines) that crosses into

the U.S. from Gretna, Manitoba (see Appendix E of the ERAP). Gretna is located west of Emerson and the Red River; the pipelines do not cross the Red River in Canada. The Interprovincial Pipeline Company operates pipelines through the Sub-Area in Manitoba.

4.2.4 Air

The Red River Valley Sub-Area is an agricultural area; therefore, there are a number of airfields (public and private) where chemicals are stored for use by aerial crop sprayers. Although hazardous materials quantities at airfields are not large ones compared to distributors, and they are often stored as they are needed on a seasonal basis, they are still significant risks. A list of airports is provided in Section 4.0 of the ERAP.

The "1996 Hazardous Materials Highway Flow Study of Pembina County" assessed the types of hazardous materials, quantities, and storage time of chemicals common to air sprayers in the county. The survey found that most chemicals stored at airfields were typically in the manufacturers containers of usually no more than five gallon in size and in concentrated form. These containers are typically made of durable plastic, white in color with a brand label on them. Products included carbofuran, parathion, azinphos methyl, furodan, sulfuric acid, and endosulfan. Storage length was generally 60 days. Gasoline and fuel was found to be stored in the largest quantities (greater than 10,000 gallons) in aboveground storage tanks, and generally year round.

The Grand Forks County LEPC performed a hazardous materials flow study in 1995 (see detailed description in Section 4.2.1, Primary Highways) of shipments via air transportation in Grand Forks County. The survey found that the second largest air carriers of hazardous materials are the aerial crop spraying services located in and around the county.

4.3 HAZARDOUS MATERIALS SPILL EVENTS

The tendency of a facility to have chronic or significant releases is a direct indication of the risk it may pose. Historical spill data can provide vital information when estimating the likelihood of a release from a specific facility or facility type. Historical spill data can also be used to identify transportation routes where accidents frequently occur. Emergency Response Notification System (ERNS) data, accessed through EPA, provide information on chemical spills and releases. Additional information regarding the causes of spills and types of oil products involved is on file at the appropriate EPA Regional office. The number of hazardous materials and oil spills that were reported in Minnesota and North Dakota are summarized below.

According to the ERNS database the following number of spills were reported from 1979 through 1998 in North Dakota: 57 spills (38 of which were oil) in Cass County; 82 spills (45 of which were oil) in Grand Forks County; 13 spills (7 of which were oil) spills in Pembina County; 23 spills (14 of which were oil) spills in Richland County; 8 spills (3 of which were oil) in Traill County; and 6 spills (2 of which were oil) in Walsh County.

According to the ERNS database the following number of spills were reported from 1989 through 1999 in Minnesota: 15 spills (7 of which were oil) in Clay County; 9 spills (2 of which were oil) in Kittson County; 7 spills (2 of which were oil) in Marshall County; 2 spills (no oil spills) in Norman County; 29 spills (8 of which were oil) in Polk County; and 4 spills (2 of which were oil) in Wilkin County.

Although releases involving oil are the most common, releases of other hazardous materials have occurred. It is probable many releases of EHS below reportable quantities have occurred, but were not reported. It is also possible that some releases that should have been reported were not reported.

4.4 NATURAL HAZARDS

It is important to take into account natural hazards in the Red River Valley Sub-Area that may cause hazardous material spills or releases. Floods and wildfires are potential natural disasters in the area, and to a lesser extent, earthquakes.

The factors that affect water availability and surplus that can cause flooding in the Red River basin are: (1) greater than normal precipitation during October-November, (2) deep frost penetration before the first significant snow, (3) greater than normal precipitation during December-March, especially during late winter, (4) below normal temperatures during March and early April followed by rapid warming, and (5) greater than normal precipitation during spring snowmelt. All of these factors do not have to occur to have flooding in the Red River basin, but all major floods can be attributed to combinations of these factors.

Average and maximum flow rates at specified U.S. Geological Survey (USGS) gauging stations along the Red River of the North and tributaries of the Red River are provided in Appendix K of the ERAP. Stream and river flow rates are available from the USGS through the Internet at <http://waterdata.usgs.gov>.

Minnesota and North Dakota are located in an area of low earthquake probability. Infrequent, small earthquakes may occur near or within the states, but it is unlikely they will cause any serious damage. Few seismograph stations are located in the Midwest because it is, geologically speaking, comparatively stable. There are no seismographs in North Dakota or Minnesota. A seismograph located at the northern end of the Black Hills, originally installed jointly by the U. S. and former Soviet governments to monitor nuclear testing, is now operated by the U.S. Geological Survey. The Canadian federal government operates a station at Flin Flon, Manitoba, and the University of Manitoba operates a station at Winnipeg. An industrial research seismograph is located at Pinawa, Manitoba, about 120 kilometers east of Winnipeg.

Wildfires occasionally occur following dry seasons and are initiated either by people or by lightning. Wildfires can cover significant amounts of terrain and would be intensified by releases of most hazardous materials. Fire stresses on hazardous material storage vessels can result in a boiling liquid expanding vapor explosion (BLEVE) resulting in widespread physical and environmental damage.

5.0 VULNERABILITY ANALYSIS

The Vulnerability Analysis identifies populations, environmental resources, and wildlife that would be vulnerable in the event of an oil or hazardous material incident. Vulnerable populations include towns, schools, hospitals, senior citizens' centers, nursing homes, and day care facilities. Vulnerable environmental resources and wildlife include threatened and endangered species, wildlife habitats, lakes, waterways, and drinking water inlets.

5.1 HIGH DENSITY POPULATIONS

Information concerning population characteristics of the counties in Minnesota included in the Sub-Area is from 2000 population estimates provided by the DOC, Bureau of the Census, Population Estimates Program. The total population for the six counties in Minnesota is 116,752. The largest population centers in Minnesota include; Moorhead with 32,177 residents, Barnesville with 2,173 residents, and Dilworth with 3,001 residents (Clay County); Hallock (Kittson County) with 1,196 residents; Warren (Marshall County) with 1,678 residents; Ada (Norman County) with 1,657 residents; East Grand Forks with 7,501 residents and Crookston with 8,192 residents (Polk County); Wheaton (Traverse County) with 1,619 residents; and Breckenridge (Wilkin County) with 3,559 residents.

Information concerning population characteristics of the counties in North Dakota in the Red River Valley Sub-Area was obtained from the DOC, Bureau of the Census, 1990 Census of Population and Housing. According to the 1990 census, the total population for the six counties in North Dakota is 223,535. The largest population centers in North Dakota include; Fargo (Cass County) with 74,111 residents; Grand Forks (Grand Forks County) with 49,425 residents; Grand Forks Air Force Base (Grand Forks County) with 9,343 residents; Cavalier (Pembina County) with 1,508 residents; Wahpeton (Richland County) with 8,751 residents; Mayville (Traill County) with 2,092 residents; and Grafton (Walsh County) with 4,840 residents.

In 2001, Manitoba, Canada, had a population of approximately 1,119,583 residents. Population information for the cities, towns, and RMs in Manitoba that fall within the Red River Valley Sub-Area was provided by the Manitoba Emergency Management Organization. The largest city in the Sub-Area is the City of Winnipeg with a population of 619,544, followed by the City of Selkirk with a population of 9,752. The largest Rural Municipality in the Sub-Area is the RM of St. Andrews with a population of 10,695. The largest town within a RM is the Town of Morris with a population of 2,723 (in the RM of Morris).

See Appendix F of this Support Document for specific population information for the towns, cities, counties, and RMs in Minnesota, North Dakota, and Manitoba within the Red River Sub-Area. Appendix F also provides the breakdown of population by age group.

5.2 SENSITIVE HUMAN POPULATIONS

The young, the aged, the ill, and the disabled are considered to be sensitive human populations. Schools, hospitals, day care centers/preschools, and nursing homes could be particularly at risk should a release occur. The occurrence and location of these facilities was obtained from Minnesota and North Dakota state agencies. This information was supplemented by information gathered at the local level. Sensitive human population information for areas in Manitoba was obtained from the specific Emergency Operations Plans for each town, city, and RM within the Red River Sub-Area.

The hospitals that serve residents of Minnesota, North Dakota, and Manitoba within the Red River Valley Sub-Area are listed in Appendix G of this Support Document. The names, addresses, phone numbers, and numbers of beds of the identified nursing homes within the Red River Valley Sub-Area are listed in Appendix G of this Support Document.

For schools identified in Minnesota, North Dakota, and Manitoba within the Red River Valley Sub-Area, the names, addresses, phone number, and enrollment are provided in Appendix H of this Support Document.

Child Care and preschool facilities within the Red River Valley Sub-Area are listed in Appendix I of this Support Document. The name, address, phone number, and capacity of the childcare facilities in Minnesota, North Dakota, and Manitoba are provided.

5.3 ENVIRONMENTALLY SENSITIVE AREAS

Environmentally sensitive areas that are typically evaluated in contingency plans include wetlands, national and state parks, critical habitat for endangered species, wild and natural research areas, marine sanctuaries, estuarine reserves, conservation areas, preserves, wildlife areas, wildlife refuges, wild and scenic rivers, recreational areas, national forests, federal and state lands that are research areas, heritage program areas, land trust areas, historical/ archaeological areas, and provincial parks. Those areas that were identified in the Red River Valley Sub-Area are listed below. A list of the state, provincially, and federally managed sensitive environmental areas in the Red River Valley Sub-Area is provided in Appendix F of the ERAP.

Although not generally considered an environmentally sensitive area, groundwater also may be contaminated by surface spills in areas where the vadose zone soils are very porous and subject to rapid infiltration, or in areas where groundwater is very near the surface. Contamination in losing surface water bodies may also contribute to groundwater degradation. Clean surface spills as soon as possible and evacuate contaminated soils where practical to minimize the potential for transport of contamination to the groundwater.

5.3.1 Waterways

Environmentally sensitive areas such as lakes, rivers, creeks, and reservoirs were identified from the EPA's "Surf your Watershed" database (www.epa.gov), an Environmental Setting summary of the Red River obtained from the USGS internet, and from the "Red River of the North Basin, Minnesota, North Dakota, and South Dakota," by Jeffrey D. Stoner, David L. Lorenz, Gregg J. Wiche, and Robert M. Goldstein, published in the Water Resources Bulletin, the Journal of the American Water Resources Association, August 1993.

From its origin, the Red River of the North meanders northward for 394 miles. The river begins at the confluence of the Bois de Sioux and the Otter Tail Rivers and flows north to its mouth at Lake Winnipeg in Manitoba. The river normally receives over 75 percent of its annual flow from the eastern tributaries as a result of regional patterns of precipitation, evapotranspiration, soils, and topography. Most runoff occurs in spring and early summer as a result of rains falling on melting snow or heavy rains falling on saturated soils. Lakes, prairie potholes, and wetlands are abundant in most physiographic areas outside of the Red River Valley Lake Plain. Bank-full channel capacities at selected cities on the main stem of the Red River are: Wahpeton-Breckenridge, 3,100 cubic feet per second (cfs); Fargo-Moorhead, 7,000 cfs; Grand Forks, 27,000 cfs, and Emerson, 25,000 cfs. Channel widths range from 200 to 500 feet and depths at bank-full stage range from 10 to 30 feet. A

complete view of the Red River of the North and its tributaries is provided in the Inland Sensitivity Atlas.

Several intakes for surface water that is used for a variety of purposes are located around these waterways. Surface water intakes are identified in Appendix G of the ERAP. A listing of dams within the Red River Valley Sub-Area is in Appendix I of the ERAP. Public access points and boat ramps within the Red River Sub-Area are listed in Appendix C of the ERAP. There are no identified marinas or navigation locks along the Red River of the North in Minnesota or North Dakota.

Along Highway 59, north of Bird's Hill, is a 30-mile flood control channel for Greater Winnipeg, Manitoba. During flood periods, part of the flow of the Red River is diverted around the city and is discharged back into the Red River below the St. Andrews Lock and Dam (SALD) at Lockport. The SALD in Lockport, Manitoba, is operated by the Public Works and Government Services of Canada.

5.3.2 Wetlands

Wetlands are sensitive habitats often found near rivers, streams, creeks, lakes, or other water sources. Wetlands are delineated based on three criteria specified by the Federal Government. These criteria include hydrology, specific soil types, and specific plant species. If these three criteria are met the area is defined as a wetland. As such, these areas are protected by the CWA. Wetlands often provide habitat for specially adapted plant and animal species that may not exist in other environments. The USFWS National Wetland Inventory Maps provide a reference source for wetland locations in the Red River Valley.

5.3.3 Fish and Wildlife

The USFWS supplied information concerning the federally listed endangered and threatened flora and fauna species located in the Minnesota and North Dakota counties within the Red River Valley Sub-Area. The North Dakota Natural Heritage Program provided a state-listed endangered and threatened species status ranking of flora and fauna. The state and federal listings of threatened and endangered flora and fauna species in Minnesota were obtained from the Natural Heritage Database from the Minnesota Division of Natural Resources.

The Minnesota and North Dakota state and federal listings of sensitive species provides county-by-county occurrence distribution and breeding habitat information. Sensitive species of fish and birds could be affected by oil or other hazardous materials discharged into the Red River of the North or tributaries to the Red River or waterways feeding into them. National Wildlife Refuge System lands (including WPAs), federal and state listed threatened and endangered species, and candidate or other assigned special status, that are present in the area, are provided in Appendix F of the ERAP.

There are no Migratory Bird Sanctuaries or National Wildlife Areas within the boundaries of the Sub-Area in Manitoba, Canada. St. Norbert Provincial Park (Winnipeg) and Netley Creek Provincial Park (RM of St. Andrews) are located along the Red River within the Sub-Area in Manitoba. Oak Hammock Marsh is a WMA located partially in the RM of St. Andrews. Provincially listed threatened and endangered species that are present in Manitoba are included in Appendix F of the ERAP. The status of species is compiled by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC).

6.0 RISK ANALYSIS

The types and quantities of hazardous materials, and their proximity to sensitive human populations and environments, determine the severity of a potential spill. Considering the likelihood and potential severity for a given hazard allows for an estimation of risk, and provides a means of prioritizing response planning and accident prevention efforts. A risk analysis estimates the likelihood that a spill will occur, estimates the severity of the subsequent effects of a spill, identifies human populations or environmental resources that are vulnerable to the spill, and establishes a ranking of risk for the identified hazards. *Technical Guidance for Hazards Analysis: Emergency Planning for Extremely Hazardous Substances*, developed by EPA, FEMA, and DOT (December 1987), was used in analyzing risks for the Red River Sub-Area Contingency Plan.

A risk analysis scorecard was completed for each EHS facility identified in Section 4 of this Plan (identified in the Tier II report tables in Appendix B of this Support Document), and a ranking of risk was made. Additionally, a risk analysis scorecard was completed for oil and gas production and transportation facilities and rail lines. These rankings are based upon the likelihood of an incident, the hazards associated with the incident, and the number of environmentally sensitive areas or human populations that could be affected. By multiplying the likelihood of a release by the effects of a release, a risk factor score was determined for the selected hazards. The total number of vulnerable areas that could be affected by a release was added to the risk factor score to obtain the total risk value. For a better estimate of the likelihood of a spill, the facility safety practices, storage configurations, and processes should be observed first-hand. All scorecards are available for review at the EPA Region VIII office. The table in Appendix B of this Support Document (preceding the Tier II reports tables) lists facilities, oil and gas production and transportation facilities and rail lines in order of Total Risk Value from highest risk to lowest risk, ranging from 42 to 10.

7.0 CREDIBLE WORST-CASE SCENARIO

The credible worst-case scenario identifies the incident that represents the greatest threat and highest risk to human populations and environmental resources and habitats. To develop the credible worst-case scenario, the Hazards Identification, Vulnerability Analysis, and the Risk Analysis was completed in as much detail as possible. This information was used to evaluate the worst credible scenario that could occur. The narrative of the credible worst-case scenario should identify the risks associated with a likely release of oil or a hazardous material, while highlighting the emergency response capabilities.

It is impossible to know with absolute certainty that this scenario is the actual worst situation that could occur in the Red River Valley Sub-Area. Although the information used to select the credible worst-case scenario is as complete and concise as possible, it is not comprehensive. Thus, the credible worst-case scenario may be an understatement of the actual "worst-case" that may occur in the Red River Valley Sub-Area.

7.1 SELECTION OF THE CREDIBLE WORST-CASE SCENARIO

In selecting the credible worst-case scenario, special consideration was given to: fixed facilities where EHSs are used, handled, or stored; heavily used hazardous materials transportation routes; potentially affected human populations and environmental resources; and local responder training and preparedness. An assessment was performed of the location, types, and amounts of EHSs present in the Sub-Area.

The scenario that was developed is an example of a situation that could potentially occur in the Red River Valley Sub-Area. The cooperation and input of local agencies and organizations will be needed to update and tailor this scenario to make it as useful and realistic as possible.

7.2 DESCRIPTION OF THE CREDIBLE WORST-CASE SCENARIO

7.2.1 Accident Scenario

On September 5, 2000, at 1 p.m., the ambient temperature in Grand Forks, North Dakota is 80B F and the winds are from the west at three miles per hour. The sky is mostly cloudy and the humidity is 80%. There is a severe thunderstorm threat issued for the afternoon and some rain has already fallen.

A Burlington Northern Santa Fe (BNSF) train consisting of sixty cars (including nine tank cars, fifteen bulktrainers, and nine freight cars) is proceeding west through Grand Forks, having just crossed the Red River. The train includes one tank car of chlorine, two tank cars of sulfuric acid, one tank car of petroleum crude oil, and three tank cars of anhydrous ammonia, along with various freight. One of the freight cars is a load of steel pipe. The pipe was improperly loaded by the shipper and shifts as the train enters the curve near North 3rd Street. The shifting weight of the pipe derailed the car. The cars behind stack up between the river and North 3rd Street. The engineer, hearing the derailment, sends a distress call to BNSF dispatch upon stopping the train. A sulfuric acid tanker car has a rupture approximately 1 foot by 0.5 foot in size at the top edge. An anhydrous ammonia tank car lying upside down has a ruptured 2-foot valve that is violently venting vapor. The petroleum crude tank car has been completely violated and is leaking all of its contents toward a drainage ditch that leads back to the Red River. The river is flowing at 1,447 cubic feet per second.

Grand Forks 9-1-1 is notified of the release by a passer-by with a cell phone at 1:01 p.m. The 9-1-1 dispatch contacts the Grand Forks Fire Department (GFFD), the Grand Forks Sheriff's Department and Grand Forks Emergency Management Office. All parties immediately grab the Red River Sub-Area Contingency Plan for quick reference on responder telephone numbers and other response information. GFFD and the Sheriff's office immediately mobilize toward the accident site.

In addition to the existing acid and anhydrous ammonia threats, there is also the immediate threat of 13,000 gallons of petroleum crude oil flowing toward the Red River, which is approximately one-tenth of a mile to the northeast of the accident site. Continuous calls to 9-1-1 from private citizens' report a white vapor cloud moving across the river toward the east.

As GFFD nears the accident site about five minutes after the accident, they encounter heavy lunch hour traffic along Demers Avenue. Upon reaching the site and quickly assessing the situation, GFFD immediately calls the ND DEM, the East Grand Forks Fire Department [Minnesota] (EGFFD), and the Grand Forks County HAZMAT Team and initiates the Incident Command System (ICS). ND DEM contacts the NRC. Because the incident threatens the Red River and populations in two states (North Dakota and Minnesota), the NRC notifies an EPA OSC in Regions VIII (Denver, Colorado) and V (Chicago, Illinois). The accident occurred in Region VIII; therefore the Region VIII OSC takes the lead and notifies the appropriate federal Natural Resource Trustees. The Region VIII and V RRTs are placed on call. EGFFD also notifies the Minnesota Duty Officer to inform them of the accident that occurred in North Dakota and of the threat to the Red River. The Minnesota Duty Officer notifies the appropriate state and federal agencies, including MN DEM, MPCA, and appropriate federal Natural Resource Trustees in Minnesota.

The Grand Forks County HAZMAT Team arrives on the accident scene at 1:30 p.m. At this point, a unified command (UC) is formed as previously established in planning exercises. The EPA OSC sets out from Denver, Colorado, and arrives on site in about six hours and begins participation in the UC.

The Grand Forks Sheriff's department, in participation with Polk County Sheriff's department, sets up numerous roadblocks at the many intersections to the west and south of the site.

Responders obtain flow data for the Red River from the USGS website at <http://waterdata.usgs.gov>. The gauging station in Grand Forks is a continuous record station located on the right bank about 200 feet upstream from the DeMers Avenue Bridge, 0.4 miles downstream from Red Lake River.

7.2.2 Vulnerable Populations and Resources

The population of East Grand Forks (approximately 9,000 people) is the most vulnerable in this scenario. The sensitive human populations in the Red River planning area downstream are identified using Appendices F through I of the Red River Support Document and may also include vulnerable resources such as surface water intakes, natural areas, and sensitive species located in and along the Red River (identified in the Red River ERAP, Appendices G and F, respectively). Additionally, traffic along Business Highway 2 and Demers Avenue has been temporarily re-routed to U.S. Highway 2 to the north.

Affected Populations within one hour after the release - The anhydrous ammonia release was modeled using the software program ALOHA. The most vulnerable area for the air pathway is East Grand Forks, downwind of the release. The ruptured ammonia tank car vents ammonia at a rate of approximately 300 lbs. per minute for nearly nine hours. The resulting vapor cloud threatens an area approximately 1.7 miles in length and 0.5 miles in width (area affected with > 30 parts per million [ppm] concentrations). Due to variability of the wind direction, the potential plume area could affect a 270-degree arc. A shift in the wind direction could cause the plume to affect additional areas. After one hour, the leading edge of the plume has traveled over a mile to the east. At a distance of 0.5 miles downwind from the accident site, the maximum outdoor concentration of 300 ppm is reached in about 30 minutes. At 1 mile downwind, it is 80 ppm. The plume dissipates the farther downwind it travels.

The petroleum crude oil reached the Red River approximately 30 minutes after the accident. The lead edge of the resulting spill has now traveled approximately one mile downstream. It takes the GFFD and EGFFD, working in conjunction, approximately 1.5 hours to get an initial boom across the river utilizing the boat ramp at Riverside Park.

Affected populations within two hours after the release - After two hours, the plume of anhydrous ammonia has diluted to less than the LOC of 300 ppm at all points downwind, although it still exists in detectable amounts.

The leading edge of the petroleum crude oil has reached the boom at Riverside Park. People recreating at the park have been asked to leave the area. The boom is successfully deflecting the oil to the west side of the river where it is collecting in a natural backwater, which was identified during emergency planning activities. A backhoe has been procured and is en-route to enlarge the backwater into a collection pit for vacuum trucks. The need for additional response equipment, such as two small boats, a suction skimmer, and additional absorbent, is being met through cooperation with responders from EGFFD.

Affected populations within five hours after the release - After five hours, the clean-up efforts are well under way. Because the ammonia tank car is still venting, responders are only able to approach to within about one quarter mile of the accident site. Due to a combination of current speed and saturation of the Riverside Park boom, additional EGFFD responders have set up a secondary booming location approximately two miles downstream of Riverside Park.

Responders for the railroad company are now on site and efforts are underway to patch the large breach in the sulfuric acid tank car.

Approximately 48 hours after the release - Responders at the accident site have been able to approach the remaining derailed cars since ammonia fumes are dissipated. Additionally, responders have begun cleaning up oil along the banks of the river downstream of the accident and also in the drainage ditch. Resources continue to be deployed as pockets of product are located, contained, and recovered. A river reconnaissance via boat has been conducted to locate these additional areas. Railroad officials have cleared the track and the line is open again, although cars and debris are still being removed. The sulfuric acid tank car has been offloaded into another tank. Some unnecessary resources are demobilized.

7.2.3 Credible Worst-Case Scenario Conclusions

Recent response training involving the deployment of absorbent booms facilitated the rapid response of local responders for this multi-jurisdictional response, particularly the GFFD and the EGFFD. The relatively accessible location of the spill eased the response effort, as did an interagency agreement for spill response set up between the two municipalities prior to the incident. The timing of the incident was fortunate in that flow on the Red River was moderate. Communications between most of the agencies representing the two municipalities, states, and EPA Regions were efficient and timely.

In the event this multi-jurisdictional incident occurs in a more rural setting, such as in Pembina County, North Dakota, or in Kittson County, Minnesota, near the U.S./Canadian border, a similar response effort may result. However, additional resources that may not be available in the immediate area may be required from other nearby counties with which interagency agreements have been set up. Additionally, if the spill entered the Red River, cross-country notifications to agencies in Manitoba, Canada, would also be required. The Town of Emerson, along the Red River, is the first town just north of the U.S./Canadian border and would require immediate notification. Also, initiation of Provincial resources would be through notification of the MEMO.

8.0 COST RECOVERY

8.1 COST RECOVERY WITHIN THE U.S.

All actions taken during a hazardous materials incident should be carefully documented so that sufficient and accurate information is available to support the response and recovery operations and to recover the cost of these operations. In addition, documentation should be of sufficient quality and detail to prove the source and circumstances of the incident, to identify the RP, and to determine the impact or potential impact to public health and/or the environment.

Documentation may take the form of written, graphic, audio, visual, or other media and should include location of the incident; time, date, and duration of the spill; amount and type of material spilled or released; source and cause of the incident; name of the RP; description of the material released; response actions taken; resources impacted or threatened; status of response and cleanup; and accurate, detailed accounting of all public costs incurred.

The following procedures may be utilized to document an incident: Record all relevant response activities and costs in daily or personal logs. Logs should be kept in bound notebooks for evidential purposes. Use photographic documentation to depict the source of the release, pathway of the discharge, and affected populations, biota, soils, and other resources. Collect samples of the released material, and material from the suspected source according to the sampling and chain-of-custody protocol established by EPA, National Enforcement Investigations Center (NEIC) Manual, and NEIC Policy and Procedures. Gather written statements of witnesses identifying the source of the release.

Whenever possible, the RP should bear all financial costs associated with a specific oil or hazardous materials incident. When the RP is unidentified, unwilling, or unable to provide adequate response, the responsibility for taking prompt action to protect public health and the environment will fall on a public agency. Some local, state, and federal level funding sources are available to response agencies. Generally, funding from local government sources should be accessed first. State and federal funding sources may be accessed when local funding is not available. Both state and federal funding sources require prior approval and extensive documentation for use. Cost recovery regulations and forms are provided in Appendix J of this Support Document.

8.1.1 Federal Statutes and Regulations

The OPA amends the CWA Section 311 to enhance federal authority to respond to oil spills, increase penalties for spills, expand the federal response organization, and augment preparedness and response activities. In particular, the amended CWA Section 311 defines the liability and penalties for RPs in addition to delineating the preparedness requirements for storage facilities.

The amended CWA Section 311 extends the liability of RPs to include damage to natural resources; damage to property; loss of revenues, profits, or earning capacity; and costs during or after oil removal activities. Existing spill compensation and liability funds are consolidated into the Oil Spill Liability Trust fund (OSLTF) to pay for removal costs and damages not recovered from RPs. The amended CWA increases civil penalties for violations resulting from discharges of oil or hazardous substances.

The OPA established OSLTF to pay for oil spill cleanups and damages in cases where the responsible party cannot or will not pay for the cleanup. The NPFC currently administers the disbursement of the OSLTF money. The OSLTF provides a funding mechanism for the Federal OSC to utilize whatever resources are necessary to mitigate a pollution discharge. The Federal OSC is the individual who must manage and monitor the funds available for the initial oil removal response.

8.2 COST RECOVERY WITHIN CANADA

8.2.1 Emergency Costs

The Lieutenant-Governor-in-Council may make orders governing the sharing of costs incurred by the Government of Manitoba, or by a local authority in carrying out emergency operations. Operational costs incurred by the Canadian Forces or other federal department(s) on behalf of the Government of Manitoba may be subject to federal/provincial cost-sharing arrangements.

An amount of money for "Flood Control and Emergency Expenditures" is budgeted annually under Vote 27. Departments that incur eligible costs in responding to an emergency may be allotted sub-appropriations for the recovery of their emergency expenditures. All CTT meetings will review departmental expenditures incurred during an emergency to insure financial efficiency and effectiveness in the provincially coordinated response.

The Dangerous Goods Handling and Transportation Act D-12 CCSM allows for cost recovery against the party having ownership, management, or control of the contaminant at the time of the release.

8.2.2 Damage Estimation/Compensation

When disaster strikes and creates an unreasonable financial burden, Disaster Financial Assistance (DFA) may be made available for eligible costs. Assistance is generally provided to help local governments, individuals, full-time farmers, small businesses, and some non-profit organizations.

The MEMO administers these programs offered under the DFA Policy. A copy of the DFA policy is available at your local municipal office. Outlined in the following paragraphs is basic information necessary to make a DFA claim and information on qualifying for assistance.

Assistance is generally available for:

1. Pre-emptive costs
 - Costs incurred for the construction of temporary dikes (berms or sandbags)
 - Costs of operation and/or rental of water pumps
2. Evacuation costs - where evacuation is necessary, reasonable expenses are eligible
3. Restoration to a pre-disaster condition
 - Loss or repair of essential items
 - Loss of uninsurable harvested or stored crops
 - Livestock fencing
 - Farm machinery and trapping equipment

- Structural Damage
 - Principle residences or full-time rental properties
 - Farmland restoration (erosion) but not loss of market value of land
 - Farm outbuildings or buildings essential to the operation of a small business
 - Driveways
- Clean-up and debris removal - Includes allowances for persons undertaking their own clean-up

Assistance is NOT available for:

1. Insurable losses - Items that are, or could have been insured at a reasonable and available rate are not eligible
2. Costs recoverable through an existing government program
3. Losses recoverable at law
4. Non-essential items
 - Luxury items
 - Recreational property and private roads
 - Lawn and garden damage
 - Fences (non-farm)
5. Loss of income and opportunity or inconveniences
6. Normal operating costs
7. Upgrading of existing facilities
8. Damages that are a normal risk of trade, occupation, or enterprise

The Process

Before, during, and after the disaster, keep track of your expenses and costs caused by the disaster. It may also be useful to document activities or damages with a camera or video recorder. Before you are eligible to apply for assistance, it is necessary for your municipality to pass and forward a resolution (within 30 days following the disaster) to MEMO requesting DFA. Once a program is in place, you have 90 days to apply for assistance.

To apply for assistance: 1) Obtain a DFA application form from your local municipal office; 2) complete your application form; and 3) return the application to the municipal office, where it will be collected and forwarded to MEMO. If your application indicates you have eligible costs, a MEMO Recovery Advisor will contact you to examine and report on damages. When you claim for private assistance, it is important to keep receipts, time sheets and invoices for all repair work or replacement of eligible items. Following inspection, your claim will be evaluated and an amount determined based on eligible costs. If you are dissatisfied with your assistance amount, an appeal process is available. For information on this process, please contact the Recording Secretary to the Disaster Assistance Appeal Board at 204-945-3050.

Limitations

The maximum assistance on private claims is 80 percent of eligible costs to a maximum of \$100,000. Claims are based on net costs. Recovered costs must be reported to MEMO and will be deducted from the overall claim. No claim should exceed the estimated cost of repair or replacement.

9.0 TRAINING AND HEALTH AND SAFETY

9.1 EXERCISES AND DRILLS

The Red River Valley Sub-Area Contingency Plan will be exercised according to the National Preparedness for Response Exercises Program (PREP) guidelines. Tabletop and functional exercises will include participation by federal, state, tribal, and local agencies as well as private industry. Tabletop exercises will include multi-jurisdictional notifications, unified command, and spill response strategy testing. Functional exercises will include multi-jurisdictional notifications and response, unified command, and evacuations. Each exercise will be designed by a design team formed from the agencies and facilities represented in this Plan.

Exercises will be evaluated by the players, observers, controllers, and evaluators. A debriefing will be held after the exercise to discuss lessons learned and action items to be addressed. Evaluation forms will be provided for individuals to complete and submit to EPA in a timely manner. Action items will be addressed in the next Plan update.

The Exercise Review Form on the next page is a form for recording exercises (tabletop, functional, and full-scale) that are performed in the Red River Valley Sub-Area. Exercise participants may fill out a form after an exercise. Additionally, a correction form is provided for changes and/or comments on the Red River Valley ACP. The content contained in this Support Document and in the Emergency Response Action Plan will be updated annually. Other critical sections contained in the Plan (e.g., phone lists, facilities lists) may be updated more frequently as information becomes available.

Please forward any completed forms to the County Emergency Management Director (Minnesota), Emergency Manager (North Dakota), or Emergency Coordinator (Manitoba), and/or send a copy to the appropriate EPA Region or MEMO at the address below:

9.2 TRAINING

Facility owners or operators must ensure that all private response personnel, volunteers, or casual laborers they employ are trained to meet at least the OSHA standards for emergency response operations promulgated in 29 CFR 1910.120. These requirements, commonly referred to as the Hazardous Waste Operations and Emergency Response (HAZWOPER) regulations, were established to ensure the health and safety of personnel employed in hazardous substance response and cleanup operations.

In general, personnel must be provided with adequate training to perform their jobs safely. This includes the fundamentals of site safety that apply generally to personnel working at hazardous waste sites. It further includes safety conscious operational training for the particular job (e.g., methods of safe boom deployment from a boat). An ongoing training program to reinforce and build upon previous training is also required (i.e., annual refresher training). It is not necessary to conduct all training in one block of time, or restrict it to a single training event.

OSHA's Hazardous Waste Operations Standard (29 CFR 1910.120) sets basic requirements for the training of personnel. These requirements are dependent upon the operations (e.g., general site operations, emergency response operations, and post-emergency response operations); on the individual's duties (e.g., first responders, general site workers, supervisors, special short-term operations, technicians, etc.); and on the degree of exposure (e.g., minimal exposure, unknown exposures, etc.).

The following levels of federally designated training are identified;

First Responder Awareness - for individuals who are likely to witness or discover a hazardous substance release and who have been trained to initiate an emergency response sequence by notifying the proper authorities of the release. They are qualified to take no further action beyond notifying the authorities of the release.

First Responder Operational - for individuals who respond to releases or potential releases of hazardous substances as part of the initial response to the site for the purpose of protecting nearby persons, property, or the environment from the effects of the release. They are trained to respond in a defensive fashion without actually trying to stop the release. They are qualified to contain the release from a safe distance, keep it from spreading, and prevent exposures.

Incident Commander - for the person responsible for all decisions relating to the management of the incident.

Technician - for individuals who meet the requirements for the First Responder Operational Level and have received additional training so that they can respond in a more aggressive offensive mode to actually stop the release at the source.

Specialist - for individuals who meet the requirements of the Technician Level and have received additional specialized training.

9.3 OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION STANDARDS

Government employees and contract personnel involved in oil spill response activities must comply with all applicable worker health and safety laws and regulations. The OSHA regulates the safety and health for employees involved in cleanup operations at uncontrolled hazardous waste sites. The regulations also apply to both emergency response and post-emergency cleanup for hazardous substance spills. The definition of hazardous substances used in these regulations is much broader than CERCLA, encompassing all CERCLA hazardous substances, RCRA hazardous wastes, and all DOT hazardous materials listed in 49 CFR Part 172. Therefore, most hazardous materials and oil spill responses are covered by the OSHA regulations. The rules cover employee protection during initial site characterization and analysis, monitoring activities, materials handling activities, training, and emergency response. All personnel involved in the cleanup of an uncontrolled hazardous waste site must be trained according to 29 CFR 1910.120.

In the Province of Manitoba, Canada, all emergency response actions and hazardous waste operations are carried out according to “The Dangerous Goods Handling and Transportation Act (D-12 CCSM),” “The Environment Act (E-125 CCSM),” and “The Workplace Safety and Health Act (W-210 CCSM).”

9.4 SITE SAFETY

A site-specific health and safety Plan as outlined in 29 CFR 1910.120(b)(4) will be prepared for emergency responses to oil and hazardous material incidents. The Health and Safety Plan must include a hazard analysis for each task; employee training requirements, personal protective equipment (PPE) to be used by personnel for each task; medical surveillance requirements for frequency and types of air monitoring, personnel monitoring, and environmental sampling techniques and instrumentation, site control measures, and decontamination procedures.

A pre-entry briefing will be held prior to initiating any site activity and periodically thereafter as frequently as required to ensure employee knowledge and assent to the Health and Safety Plan. The Plan shall be reviewed by the site health and safety supervisor. Additional requirements are specified in 29 CFR 1910.120.

RED RIVER VALLEY ACP DEFINITIONS AND ACRONYMS

DEFINITIONS

Definitions contained herein, unless otherwise specified, are taken from the National Contingency Plan (NCP) Section 300.5 (“Definitions”), Section 1001 of the Oil Pollution Act (OPA), 33 U.S.C. Section 2701 (“Definitions”), “Definitions” of the Region V Regional Contingency Plan (RCP), and “Definitions” of the Region VIII RCP.

Area Committee: As defined by Sections 311 (a) (18) and (j) (4) of the Clean Water Act (CWA), as amended by OPA, means the entity appointed by the President consisting of members from federal, state, and local agencies with responsibilities that include preparing an ACP for the area designated by the President. The Area Committee may include ex-officio (i.e., non-voting) members (e.g., industry and local interest groups). In Regions V and VIII, the regional Response Team also serves as the Area Committee. In the designated areas of Regions V and VIII, sub-area committees consist of federal, state, and local agencies, as well as industry and local interest groups as ex-officio members.

Area Contingency Plan: As defined by Sections 311 (a) (19) and (j) (4) of CWA, as amended by OPA, means the Plan prepared by an Area Committee, that in conjunction with the NCP, shall address the removal of a discharge including a worst-case discharge and the mitigation or prevention of a substantial threat of such a discharge from a vessel, offshore facility, or onshore facility operating in or near an area designated by the President. In Region VIII, the Area Contingency Plan has been combined with the Regional Contingency Plan.

Contingency Plan: (1) A document used by federal, state, and local agencies to guide their planning and response procedures regarding spills of oil, hazardous substances, or other emergencies; (2) a document used by industry as a response plan to spills of oil, hazardous substances, or other emergencies occurring upon their transportation vehicle, or at their facilities.

Discharge: As defined by Section 311 (a) (2) of CWA, includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping of oil, but excludes discharges in compliance with a permit under Section 402 of CWA.

Drinking water supply: As defined by Section 101 (7) of the Comprehensive Environmental Recovery, Compensation, and Liability Act (CERCLA), means any raw or finished water source that is or may be used by a public water system (as defined in the Safe Drinking Water Act) or as drinking water by one or more individuals.

Economically sensitive areas: Those areas of explicit economic importance to the public that due to their proximity to potential spill sources may require special protection. Economically sensitive areas include, but are not limited to, potable and industrial water intakes, locks and dams, and public and private marinas.

Emergency Response Notification System (ERNS): The U.S. Environmental Protection Agency (EPA) maintains an ERNS database that includes reports made to the National Response Center regarding accidental releases of hazardous substances in excess of reportable quantities. Reporting requirements are set by Section 304 of the Superfund Amendments and Reauthorization Act (SARA).

Environment: As defined by section 101(8) of CERCLA, means the navigable waters, the waters of the contiguous zone, and the ocean waters of which the natural resources are under the exclusive management authority of the United States under the Magnuson Fishery Conservation and Management Act; and any other surface water, groundwater, drinking water supply, land surface and subsurface strata, or ambient air within the United States or under the jurisdiction of the United States.

Environmentally sensitive area: An especially delicate or sensitive natural resource that requires protection in the event of a pollution incident. Guidance on designations of areas considered to be sensitive can be found in the “Guidance for Facility and Vessel Response Plans: Fish and Wildlife and Sensitive Environments,” published by Department of Commerce and National Oceanic and Atmospheric Administration.

Extremely Hazardous Substance (EHS): The list of extremely hazardous substances is found in Section 355 of SARA. The list currently contains about 360 chemicals. Because of their extremely toxic properties, these chemicals were chosen by Congress to provide an initial focus for chemical emergency planning.

Federal Emergency Management Agency (FEMA): Responsible for the coordination of all civil emergency planning, management, mitigation and assistance for the federal government. FEMA can also provide additional financial relief when state and local funds are inadequate.

Federal On-Scene Coordinator: The Federal official at an incident scene responsible for coordinating response activities.

Groundwater: As defined by section 101(12) of CERCLA, means water in a saturated zone or stratum beneath the surface of land or water.

Hazardous Chemicals: These chemicals are defined by the Occupational Safety and Health Act (OSHA) and its promulgated regulations as chemicals that represent a physical or health hazard. Inventories of these chemicals may be subject to reporting requirements if a facility manufactures, processes, or stores them in certain amounts. Per sections 311-312 of SARA, if they are stored at the threshold quantity or above, inventories of these chemicals, and material safety data sheets, must be submitted to the Local Emergency Planning Committee (LEPC), the local fire department, and the State Emergency Response Commission (SERC).

Hazardous Materials: In this analysis, “hazardous materials” refers generally to hazardous substances, petroleum (oil), natural gas, synthetic gas, acutely toxic chemicals, and other toxic chemicals. This definition was agreed upon by the National Response Team for use in the *Hazardous Materials Emergency Planning Guide* (NRT-1, 1987). EHSs, hazardous chemicals, hazardous substances, hazardous wastes, toxic chemicals, and oil all fall within this definition.

Hazardous Substances: These substances are defined under Sections 101(14) and 102(a) of the CERCLA (Superfund). The current list contains about 720 substances. Per Section 304 of the SARA, releases of these chemicals above certain amounts must be reported to the National Response Center, who will see that they are included in the ERNS.

Hazardous Wastes: Hazardous wastes are defined in Section 1004(5) of the Resource Conservation and Recovery Act (RCRA) as a “solid waste, or combination of solid wastes, which, because of its quantity, concentration, or physical, chemical, or infectious characteristics may: 1) cause, or significantly contribute to an increase in mortality or an increase in serious

irreversible or incapacitating reversible illness or 2) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.” Hazardous wastes can be listed as characteristic. Characteristic hazardous wastes are classified according to four characteristics: ignitability, corrosivity, reactivity, or extraction procedure (tendency to be leached) toxicity.

Immediately Dangerous to Life and Health (IDLH): The National Institute of Occupational Safety and Health (NIOSH) defines IDLH as a condition “that poses a threat of exposure to airborne contaminants when that exposure is likely to cause death or immediate or delayed permanent adverse health effects or prevent escape from such an environment.”

Inland waters: Those waters of the United States in the inland zone, waters of the Great Lakes, Lake Champlain, and specified ports and harbors on inland rivers.

Inland zone: The environment inland of the coastal zone excluding the Great Lakes, Lake Champlain, and specified ports and harbors on inland rivers. The term inland zone delineates an area of federal responsibilities for response actions. Precise boundaries are determined by EPA/U.S. Coast Guard (USCG) agreements and identified in Regional Contingency Plans.

Level of Concern (LOC): For purposes of this analysis, LOCs are defined as the concentrations of an EHS in air above which there may be serious irreversible health effects or death, as a result of a single exposure for a relatively short period of time. Pursuant to guidelines provided by the National Response Team, for this analysis the LOC has been estimated by using one-tenth of the IDLH level published by NIOSH.

Local Emergency Planning Committee (LEPC): A group of local representatives appointed by the SERC to prepare a comprehensive emergency plan for the local emergency planning district, and carry out all requirements of SARA Title III of 1986. Among their responsibilities are: to develop an emergency plan to prepare for and respond to chemical emergencies, receive and keep track of hazardous chemical inventories submitted by local facilities, to make information available to the public, and to serve as a focal point in the community for information related to emergency preparedness for chemical emergencies. On tribal lands, Tribal Emergency Response Commissions (TERCs) may be established to carry out these and other responsibilities.

National Earthquake Hazard Program - A group of agencies including the FEMA, the National Science Foundation, the United States Geological Survey, and the National Institute of Standards and Technology, developing building standards to ensure structural integrity during an earthquake. The standards are based on the risk to a geographical area of an earthquake with a certain intensity. The geographical areas are based on seismic zones ranging from 0 to 4, with 0 being the lowest hazard level and 4 the highest.

National Institute of Occupational Safety and Health (NIOSH): The NIOSH was created to develop and recommend health and safety standards. Acting under the authority of the OSHA of 1970 (Public Law 91-596), NIOSH develops and periodically revises recommended exposure limits for hazardous substances or conditions in the workplace.

National Pollution Funds Center: As defined by Section 7 of Executive Order 12777, the National Pollution Funds Center (NPFC) is the entity established by the Secretary of the Department of Transportation whose function is the administration of the Oil Spill Liability Trust Fund (OSLTF). This includes access to the OSLTF by federal agencies, states, and designated

trustees for removal actions and initiation of natural resource damage assessments, as well as claims for removal costs and damages.

Natural Resource Trustees: Government officials who are to act on behalf of the public as trustees for natural resources.

Natural Resources: Land, fish, wildlife, biota, air, water, ground water, drinking water, and other such resources managed by, held in trust by, or otherwise controlled by the United States, any State or local government, or Indian tribe.

Navigable waters: As defined by 40 CFR 110.1, the term navigable waters includes: (a) All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide; (b) Interstate waters, including interstate wetlands; (c) All other waters such as intrastate lakes, rivers, streams, mud flats, sand flats, and wetlands, the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) That are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; (3) That are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as navigable waters under this Section; (e) Tributaries of waters identified in (a) through (d) of this definition, including adjacent wetlands; and (f) Wetlands adjacent to waters identified in (a) through (e) of this definition: Provided, that waste treatment systems (other than cooling ponds meeting the criteria of this paragraph) are not waters of the U.S.

Oil: As defined by Section 311 (a) (1) of CWA, means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, oil mixed with ballast or bilge water, vegetable oil, animal oil, and oil mixed with wastes other than dredged spoil.

Oil Spill Liability Trust Fund: The fund established under Section 9509 of the Internal Revenue Code of 1986 (26 U.S.C. Section 9509).

Regional Response Team: The Federal response organization (consisting of representatives from selected federal and state agencies) that acts as a regional body responsible for planning and preparedness before an oil spill or hazardous substance release and for providing advice and assistance to the EPA On-Scene Coordinator (OSC) in the event of a major or substantial spill or release.

Regional Review Committee: In **Minnesota** only. A group of local representatives appointed by the SERC to prepare a comprehensive emergency plan for the local emergency planning district, and carry out all requirements of SARA Title III of 1986. Among their responsibilities are: to develop an emergency plan to prepare for and respond to chemical emergencies, receive and keep track of hazardous chemical inventories submitted by local facilities, to make information available to the public, and to serve as a focal point in the community for information related to emergency preparedness for chemical emergencies.

Resource Conservation and Recovery Information System (RCRIS): A database maintained by EPA that lists hazardous waste generators, treatment, storage and disposal facilities, and transporters.

Spill of National Significance: A spill that due to its severity, size, location, actual or potential impact on the public health and welfare or the environment, or the necessary response effort, is so complex that it requires extraordinary coordination of federal, state, local, and responsible party resources to contain and clean up the discharge.

State Emergency Response Commission (SERC): A group of officials appointed by the state governor to implement the provisions of SARA Title III. The SERC coordinates the work of the local emergency planning committees and reviews local emergency plans annually.

Superfund Amendments and Reauthorization Act (SARA): This act was passed in 1986 to reauthorize the CERCLA. Title III of the act, also known as the Emergency Planning and Community Right-to-Know Act (EPCRA), was enacted in response to chemical emergency preparedness needs, underscored by a catastrophic chemical accident in Bhopal, India, and a similar, but less serious accident in Institute, West Virginia.

Tier II Form: Tier II forms are the most common forms used to provide information on hazardous chemicals, as required by Sections 311-312 of the SARA. As many as 50,000 chemicals can fit the definition of a hazardous chemical, and thus, if present above thresholds, must be reported. When completed properly, Tier II forms include information regarding the amounts, general locations, and the names of specific chemicals used or stored at a fixed facility.

Threshold Limit Value - Ceiling (TLV-C): A maximum exposure concentration set by the American Conference of Governmental Industrial Hygienists (ACGIH). This organization is not a regulatory body, but publishes exposure guidelines adopted as a standard throughout industry. The average worker should not be exposed to an agent in concentrations exceeding the ceiling concentrations as severe acute effects could result.

Threshold Planning Quantity (TPQ): The list of extremely hazardous substances includes a TPQ for each substance. If this amount or more of the chemical is present at any manufacturing plant, warehouse, hospital, farm, small business, or other facility, the owner or operator must notify both the state emergency response commission and the local emergency planning committee.

Toxic Chemicals: This list is found in association with Section 313 of the SARA. There are more than 320 chemicals or chemical categories on this list, which were selected by Congress primarily because of their chronic or long-term toxicity. Estimates of releases of these chemicals into all media-air, land, and water-must be reported annually for inclusion in the Toxic Release Inventory.

Toxic Release Inventory (TRI): Section 313 of the SARA requires that certain classes of facilities submit annual reports on toxic chemical releases to the states and EPA. EPA is required to compile them into a national computerized database called the TRI. This reporting requirement pertains to the total amount of chemicals released into the environment-either accidentally or as a result of routine plant operations-or transport as waste to another location.

Used Oil: Any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities.

Vulnerable Zone: For the purposes of this analysis, a vulnerable zone is an estimated geographical area that may be subject to concentrations of an airborne extremely hazardous

substance at levels that could cause irreversible acute health effects, or death to human populations, within the area following an accidental release.

Vulnerable Zone Corridor: A vulnerable zone corridor is similar to the vulnerable zone except it is estimated for a transportation route rather than for a fixed site.

Waste Oil: For the purposes of this Plan, waste oil is any oil that has been refined from crude oil, or any synthetic oil, that has been physically or chemically contaminated as a result of a spill.

Wetlands: Those areas that are inundated or saturated by surface or groundwater at a frequency or duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include playa lakes, swamps, marshes, bogs, and similar areas such as sloughs, prairie potholes, wet meadows, prairie river overflows, mud flats, and natural ponds (40 CFR 112.2 (y)).

ACRONYMS

Department Title, Agency Title, and Operational Abbreviations:

ACP	Area Contingency Plan
ALOHA	Areal Locations of Hazardous Atmospheres
AST	Atlantic Strike Team
ASTDR	Agency for Toxic Substances and Disease Registry
BIA	Bureau of Indian Affairs
BLEVE	Boiling Liquid Expanding Vapor Explosion
BLM	Bureau of Land Management
BNSF	Burlington Northern Santa Fe Railroad
BOR	Bureau of Reclamation
CAMEO	Computer-Aided Management of Emergency Operations
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act of 1980, 42 U.S.C., Sections 9601 <i>et seq.</i> , also known as Superfund
CERCLIS	CERCLA Information System
CFR	Code of Federal Regulations
cfs	Cubic feet per second
COSEWIC	Committee on the Status of Endangered Wildlife in Canada
CTT	Central Task Team
CWA	Clean Water Act, as amended by OPA, 33 U.S.C., 1251 <i>et seq.</i>
DES	Disaster and Emergency Services
DFA	Disaster Financial Assistance
DOC	U.S. Department of Commerce

Transportation Hazards - Highways

MINNESOTA - PRIMARY HIGHWAYS

Route Name	Counties	Primary Direction
Interstate 94	Clay, Wilkin	Northeast-Southwest
U.S. Highway 2	Polk	East-West
U.S. Highway 10	Clay	East-West
U.S. Highway 52	Clay, Wilkin	Northeast-Southwest
U.S. Highway 59	Kittson, Marshall, Polk	North-South
U.S. Highway 75	Kittson, Marshall, Polk, Norman, Clay, Wilkin, Traverse	North-South
State Highway 1	Marshall	East-West
State Highway 9	Polk, Norman, Clay, Wilkin, Traverse	North-South
State Highway 11	Kittson	East-West
State Highway 27	Traverse	Northeast-Southwest
State Highway 32	Marshall, Polk, Norman, Clay	North-South
State Highway 34	Clay	East-West
State Highway 55	Wilkin	East-West
State Highway 89	Marshall	North-South
State Highway 92	Polk	East-West
State Highway 102	Polk	Northeast-Southwest
State Highway 113	Norman	East-West
State Highway 171	Kittson	East-West
State Highway 175	Kittson	East-West
State Highway 200	Norman	East-West
State Highway 210	Wilkin	East-West
State Highway 219	Marshall	North-South
State Highway 220	Kittson, Marshall, Polk	North-South

Note : There are no **Hazardous Materials Transportation Corridors** designated by the U.S. DOT in the Sub-Area in MN.

NORTH DAKOTA - PRIMARY HIGHWAYS

Route Name	Counties	Primary Direction
Interstate 29 **	Pembina, Walsh, Grand Forks, Traill, Cass, Richland	North-South
Interstate 94	Cass	East-West
U.S. Highway 2	Grand Forks	East-West
U.S. Highway 81	Pembina, Walsh, Grand Forks	North-South
U.S. Highway 81	Grand Forks, Traill, Cass, Richland	North-South (I-29)
U.S. Highway 52	Cass	East-West (I-94)
State Highway 18	Pembina, Walsh, Grand Forks, Traill, Cass, Richland	North-South
State Highway 38	Cass	North-South
State Highway 46	Cass, Richland	East-West
State Highway 32	Pembina, Walsh, Grand Forks	North-South
State Highway 15	Grand Forks	East-West
State Highway 66	Pembina	East-West
State Highway 5	Pembina	East-West
State Highway 13	Richland	East-West
State Highway 11	Richland	East-West
State Highway 127	Richland	North-South
State Highway 200/200A	Traill	East-West
State Highway 17	Walsh	East-West

*** I-29 becomes Provincial Highway 75 as it travels through the Town of Emerson, Manitoba, Canada.*

Note : There are no **Hazardous Materials Transportation Routes** designated by the U.S. DOT in ND.

MANITOBA - PRIMARY HIGHWAYS

Route Name	Towns or Rural Municipalities	Primary Direction
Provincial Highway 75	Emerson, RM of Montcalm/Town of Letellier, St. Jean Baptiste, RM of Morris/Town of Morris, RM of Ritchot, Winnipeg.	North-South
Provincial Highway 14	RM of Montcalm	East-West
Provincial Highway 23	RM of Morris/Town of Morris	East-West
Trans-Canada Highway 100/Trans-Canada Highway 1	Winnipeg	Perimeter Hwy around Winnipeg; Hwy 1 joins Hwy 100 from the east and west to form the perimeter.
Provincial Highway 15	Winnipeg	East-West
Provincial Highway 9	RM of West St. Paul, RM of St. Andrews, City of Selkirk	North-South
Provincial Highway 59	RM of East St. Paul, RM of St. Clements	North-South
Provincial Highway 44	RM of St. Clements	East-West
Provincial Highway 67	RM of St. Andrews	East-West

PART I - INTRODUCTION

How to Use This Guide

If you believe you have uncompensated removal costs or damages resulting from an oil spill to the navigable waters or the threat of an oil spill to the navigable waters, you may be entitled to compensation from the Oil Spill Liability Trust Fund (OSLTF). The National Pollution Funds Center (NPFC) created this guide to assist you in determining whether you have damages that may be covered and, if so, how to properly submit a claim.

This guide is intended to assist individuals and small entities (e.g., small businesses, not-for-profit organizations, and small governmental jurisdictions) with submitting a claim or claims to the NPFC. This guide also provides assistance to states and larger entities. This guide is divided into four parts: “Introduction,” “General Information,” “General Claim Requirements,” and “Specific Claim Requirements.”

To help determine whether you are eligible, Part II (pages 2-3) provides background information on the NPFC, OSLTF, the Oil Pollution Act (OPA), the types of claims that can be submitted, and who is eligible to submit claims.

To help you learn about the submission process, deadlines, etc., Part III (pages 4-6) addresses information that is applicable to submission of all claims, regardless of claim type. Format, time limits, and the adjudication process are discussed in this section.

To learn about specific proof and supporting information for different claim types, Part IV (pages 7-16) addresses the specific requirements for each claim type and lists additional information that may be required to process your claim. General Claim Requirements also apply.

Key Definitions and an Acronym List can be found on pages 17 and 18, respectively. A Privacy Act Statement and instructions for the optional claim form can be found on page 19. A copy of the Optional OSLTF Claim Form is inserted with the guide.

Additional information may be obtained from the NPFC Web site: www.uscg.mil/hq/npfc

This guide is intended to help claimants submit a claim against the OSLTF. **IT IS NOT A LEGAL REFERENCE.** The Oil Pollution Act of 1990 (OPA) (33 U.S.C. 2701 et. seq.) is the law that established the OSLTF and covers incidents involving oil spills. Claimants should consult the claims regulations in 33 CFR Part 136 to address legal and regulatory issues. If there is a conflict between this guide and OPA or the regulations at 33 CFR Part 136 the statute and regulations prevail.

If any claims-related questions are not answered by this guide or if you do not have internet access, you may contact the NPFC in writing, by phone, fax, or email:

National Pollution Funds Center
Claims Adjudication Division
4200 Wilson Boulevard, Suite 1000
Arlington, Virginia 22203-1804

Telephone: (800) 280-7118
Fax: (202) 493-6937 or (202) 493-6938

Claims-related email questions can be sent to the NPFC: ClaimsInfo@ballston.uscg.mil

Normal business hours are weekdays from 7:30 a.m. to 4:00 p.m. eastern time.

PART II - GENERAL INFORMATION

Background

OPA dictates that the spiller (responsible party or RP) pay compensation for certain removal costs or damages suffered as a result of an oil spill. The types of costs or damages covered under OPA are listed on page 2, under "What Claims may be Submitted?"

The OSLTF was established to provide—

- * Funds for Federal cleanup
- * Funds to assess and restore damaged natural resources
- * Compensation to claimants for certain removal costs and damages resulting from an oil spill incident
- * Cost recovery from responsible parties for costs and damages paid from the OSLTF

The USCG, through the NPFC, manages the OSLTF by—

- * Disbursing funds for Federal cleanup
- * Monitoring the sources and uses of funds
- * Adjudicating claims submitted to the OSLTF for payment
- * Pursuing reimbursement from the RP for costs and damages paid by the OSLTF

After the NPFC evaluates your claim, a determination is made to accept or deny all or part of your claim. You will have 60 days to accept or reject the claim determination. If you accept the claim determination, then the NPFC will process the payment of the amount offered. If you reject the claim determination, you can request reconsideration of your claim and provide additional information. On reconsideration, the NPFC may re-evaluate your entire claim, based on the new information/documentation that you provide.

What Claims may be Submitted?

OPA incidents involve a discharge or substantial threat of a discharge of oil from a vessel or facility into or on the navigable waters of the U.S., adjoining shoreline, or the exclusive economic zone. Claim types allowed under OPA include—

- * Removal Costs (see page 8)
- * Real or Personal Property Damage (see page 9)
- * Loss of Profits and Earning Capacity (see page 10)
- * Loss of Government Revenue (see page 12)
- * Cost of Increased Public Services (see page 13)
- * Subsistence Loss (see page 14)
- * Natural Resource Damage (see page 15)

Under certain conditions, OPA also allows an RP to submit a claim to the NPFC for removal costs and damages paid by the RP (see page 16).

Who is Eligible to Submit a Claim?

A claimant can be—

- * An individual
- * A corporation, partnership, or association
- * The United States government
- * Federal, state, foreign, or Indian tribe trustee
- * States, the District of Columbia, municipalities, and political subdivisions of States
- * The Commonwealth of Puerto Rico, Guam, American Samoa, the U.S. Virgin Islands, the Commonwealth of the Northern Marianas Islands, and any other territory or possession of the United States
- * Certain foreign claimants, in accordance with Section 1007 of OPA (33 U.S.C. 2707)
- * An RP who establishes entitlement to a defense to liability or limitation of liability in accordance with Section 1008 of OPA (33 U.S.C. 2708)

Lawsuits

The NPFC cannot evaluate, decide, or pay any claim that is part of a court case, including a class action suit, to recover the costs or damages in your claim.

Insurance

Claimants are not required to have insurance for OPA removal costs or damages. If you do have insurance that may cover the removal cost or damage, you are not required to use it, but you must report that you have it.

Double Payments

If a removal cost or damage claim has already been paid, no other claim for the same removal costs or damages can be paid from the OSLTF. For example, if a removal contractor accepts payment from the OSLTF for his removal costs, but then fails to pay his subcontractor, the subcontractor cannot be paid from the OSLTF for the same removal activity.

Mitigation

The Coast Guard considers that each claimant has a responsibility to make reasonable efforts to mitigate—that is, to avoid or minimize—the losses from an oil spill incident. Additional expenses related to avoiding or minimizing losses by a claimant can be included in the claim as additional expenses. The claimed amount of a direct loss will be adjusted for extra expenses and/or income related to avoidance/minimization efforts.

False Claims

If you submit a false claim you can be subject to civil and criminal prosecution under Federal law (18 U.S.C. 287 and 1001; 31 U.S.C. 3729).

PART III - GENERAL CLAIM REQUIREMENTS

Do You Qualify?

To qualify as an OPA claim, the following must be true:

- * The incident (events surrounding the spill or threat of a spill) must have occurred on or after August 18, 1990.
- * The incident involved the discharge, or substantial threat of discharge, of oil. (OPA expressly exempts discharges from public vessels, such as a U.S. Naval vessel; from an onshore facility subject to the Trans-Alaska Pipeline Authorization Act; and from discharges permitted by Federal, state, or local permit.)
- * The discharge or substantial threat of a discharge was into or upon the navigable waters of the U.S., their adjoining shorelines, or the Exclusive Economic Zone of the United States. A spill that impacts or potentially impacts ground water but not the navigable waters of the U.S. is not an OPA spill.
- * The cost or damage is a type covered by OPA (see listing of claim types on page 2).

Where Do I Submit a Claim?

You must first submit the claim to the RP—

- * Unless you fall under one of the exceptions noted in the following text, you must always first submit your claim to the RP or its insurer. (This guide does not address procedures for submitting claims to the RP. The RP must establish and advertise those procedures.)
- * Your submission to the RP should state that you are filing a claim under Section 2713(a) of the Oil Pollution Act. Simply submitting an invoice or a bill to the RP is not sufficient unless the bill or invoice clearly states that it is a claim under OPA.

The exceptions for sending your claim directly to the NPFC rather than submitting it first to the RP are—

- * The NPFC advertises or notifies claimants to submit claims directly to the NPFC.
- * An RP asserting a claim under Section 1008 of OPA (33 U.S.C. 2708).
- * A Governor of a State submitting for removal costs incurred by the State.
- * A U.S. claimant suffers removal costs or damages from oil pollution from a foreign off-shore unit.

After submitting your claim to the RP can you submit the claim to the NPFC?

- * Yes. If the RP or its insurer denies your claim or does not pay within 90 days of the date you presented your claim to them or the RP's advertising began (whichever is later), you can submit your claim to the NPFC.

What You Need to Submit to the NPFC

- * You must provide the NPFC with the information, documentation, and evidence needed to support your claim. If more information is needed, the NPFC will ask you for it. To make the process as quick as possible on your behalf, submit complete and detailed supporting information with your claim. *Receipt of incomplete information is the most common cause for delay in processing claims!*

- * You will be reimbursed for reasonable removal costs and damages covered under OPA, including the reasonable cost of assessing your damage. For example, you can be reimbursed the costs of an accountant's assessing your business losses, but you will not be reimbursed for the accountant's costs of assisting you in preparing the claim.
- * Businesses should identify, when appropriate, any "Confidential Business Information" included with your claim and provide the reason(s) you consider the information to be confidential. Under Federal law the government may be required to release documents to the general public.

(NOTE: Detailed information needed for each claim category is included in Part IV.)

Claim Format

There is no required format for OSLTF claims. You must, however, support your claim with evidence, information, and documentation; an optional claim form and instructions are included with this guide and may be used as an aid.

You do not need a lawyer to file a claim. You will not be compensated for any attorney's fees if you use a lawyer to assist in preparing or filing a claim.

Claims must be made in writing; we cannot accept verbal claims. Claims must follow the requirements for a claim (33 CFR 136.105), including the following information:

- * Type and amount of damages for each type of claim
- * Total amount claimed
- * Your full name, street and mailing address(es), and telephone numbers for your home and business
- * Time, date, and geographic location of the oil spill; identification of the navigable water impacted; and an explanation of how the oil impacted the water
- * Identify the vessel, facility, or person causing or suspected of causing the spill, if possible, and include an explanation of why you suspect the vessel, facility, or person to have caused the spill
- * A general description of the impact of the spill, including the removal costs or damages claimed by category
- * Explanation of how the damage happened, the location, and the date and time (this may/may not be the same as the location, date, or time of the spill)
- * Descriptions of actions taken to minimize or avoid damages
- * Costs of assessing the damage (do not include attorney's fees or other costs for claim preparation or filing)
- * Name, street and mailing address(es), and telephone numbers of any witnesses and a brief description of what the witness knows
- * Copies of any written communications and content of any verbal communications with the RP, including any claims submitted to the RP
- * Information on any attempts to submit claims to the person or company responsible for the oil pollution
- * Information on any insurance claim made for removal costs or damages
- * Any compensation you have received for removal costs or damages from the spill

- * Statement that no action has been taken in court or, if action has been taken, the status of the pending court case
- * Certification statement of the accuracy of the claim to the best of your knowledge and belief
- * Your signature and, if applicable, your legal representative's signature

If necessary, the NPFC may ask you for additional information.

Time Limits

Claims for Damages: Damage claims must be made within three (3) years after the date on which the damage and its connection with the spill was reasonably discoverable with the exercise of due care. The only exception is for natural resource damage claims – see the Natural Resource Damage Funding Guidelines link in Section G of Part IV.

Claims for Removal Costs: A removal cost claim must be made within six (6) years after the date of completion of all removal actions for the incident.

NPFC considers the claim as "presented" on the day it is received.

The Adjudication Process

The NPFC processes claims in the order received.

The NPFC reviews the claim to see if all the information is included. If additional information is needed, the NPFC will request that you forward the information. If the information requested is not received within 90 days, NPFC will complete adjudication of the claim with the information it has. This may result in a reduction of possible compensation or denial of the claim.

Once the NPFC sends you a claim determination, you must accept or reject the offer within 60 days—

- * If you accept, you must sign a release.
- * If you take no action within 60 days, the offer to pay will be voided and the claim closed.
- * If you reject the offer, you may provide additional information and ask NPFC to reconsider your claim. This may start an entirely new review process. Another claim determination will be made as a result of reconsideration and this determination on reconsideration becomes final agency action. "Reconsideration" is not "negotiation."

Claims are paid in the order that they are approved. Payment normally takes 30 days after the NPFC receives your signed release.

PART IV - SPECIFIC CLAIM REQUIREMENTS

Sections A through H address the specific requirements for each category of claim and lists additional information above that listed in the General Claims Requirements that may be required to process your claim.

If any claims-related questions are not answered by this guide or if you do not have internet access, you may contact the NPFC in writing, by phone, fax, or e-mail:

National Pollution Funds Center
Claims Adjudication Division
United States Coast Guard
4200 Wilson Boulevard, Suite 1000
Arlington, Virginia 22203-1804

Telephone: (800) 280-7118
Fax: (202) 493-6937 or (202) 493-6938

Claims-related email questions can be sent to the NPFC: ClaimsInfo@ballston.uscg.mil

Normal business hours are weekdays from 7:30 a.m. to 4:00 p.m. eastern time.

A. Removal Costs

Removal Costs: “Removal Costs” means the costs of removal that are incurred after a discharge of oil has occurred or, in any case in which there is a substantial threat of a discharge of oil, the costs to prevent, minimize, or mitigate oil pollution from such an incident.

Example of a Typical Claim: You own waterfront property where a boat and dock were oiled from an OPA incident. You notified the National Response Center of the incident, discussed it with the FOSC, and hired a local contractor to remove the oil. You may have a claim for the cost of the contractor used to remove the oil from your property.

Eligible Claimant: Anyone incurring removal costs.

What you Must Prove: In addition to the information required in Part III, you must provide information that is specific to removal cost claims to prove that—

- * Necessary actions were taken to prevent or reduce the effects of the spill.
- * Removal costs resulted from these actions.
- * Actions taken were reasonable and consistent with the National Contingency Plan.

Examples of Supporting Information:

Evidence of Spill:

- * FOSC report
- * Information on EPA or USCG notification
- * Newspaper reports describing the spill
- * Witness(es) statement(s)

General Information:

- * Detailed description of actions
- * Dates on which work was performed
- * Analysis of spill substance
- * Map of area
- * Pictures of area, damage, and spill

Costs:

- * Receipts, invoices, or similar records with description of work
- * How rates were determined and any comparison of rates
- * Daily records of personnel costs including details on labor rates, hours, travel, and transportation
- * Daily records of equipment costs including description and use
- * Signed disposal manifests and proof of payment for disposal
- * Payroll verification of hourly rate at the time of spill
- * Verification of standard equipment rates for equipment used

B. Real or Personal Property Damages

Real or Personal Property Damages: “Real or Personal Property Damages” means damages for injury to, or economic losses resulting from destruction of, real or personal property.

(NOTE: Injury to real or personal property does not include personal injury!)

Example of a Typical Claim: You own a recreational boat or waterfront property that was oiled by an OPA incident. You may have a claim for the cost of restoring your property to its pre-spill condition.

Eligible Claimant: Person or entity who owns or leases the property.

You Must Provide Information Showing:

- * Your ownership or leasehold interest in the property
- * That property was injured or destroyed
- * Value of property both before and after injury
- * Cost of repair or replacement of the property

If you lost money, show:

- * The property was not usable because of the oil spill
- * The value of your property before and after the spill
- * Whether or not substitute property was available, and, if you did use substitute property, what the costs were
- * How you lost money from the damage to the property

Examples of Documentation to Support Claim:

Evidence of Spill:

- * FOSC report
- * Information on EPA or USCG notification
- * Newspaper reports describing the spill
- * Witness(es) statement(s)

General Information:

- * Copy of title, deed, lease, or license to property in your name
- * Pictures or videotape of property and/or damage
- * Maps or legal documents showing the location of the property within the spill area
- * If you sold the property, professional property appraisals for the value of the property prior to and after the spill, actual selling price of the property, and evidence connecting the depressed selling price to the oil spill rather than to other economic or real property factors
- * Copies of bills paid for repair of damage or two estimates showing activities and costs to repair the damage
- * Any expenses or money lost while the property was unavailable because of spill damage
- * Lease or rental agreement of any substitute property used

C. Loss of Profits and Earning Capacity

Loss of Profits and Earning Capacity: “Loss of profits and earning capacity” means damages equal to the loss of profits or impairment of earning capacity due to the injury, destruction, or loss of real property, personal property, or natural resources.

You do not have to own the damaged property or resources to submit a claim under this category.

Example of a Typical Claim: You lease a commercial charter boat that was trapped in port when the Coast Guard closed the river to remove oil. You may have a claim for lost profits or earnings during the time the river was officially closed. The recreational fishermen whose trip was cancelled would not have a loss of profits or earnings.

Eligible Claimant: Anyone with loss of profits or income.

You Must Provide Information Showing:

- * Property or natural resources that were damaged, destroyed or lost, resulting in your loss
- * Your income was reduced due to the damage or loss of the property or natural resources and how much it was reduced
- * Amount of profits and earnings in similar time periods
- * If alternative employment or business was available, what, if any, income was received from it
- * Savings to overhead and other normal expenses not paid as a result of the spill (e.g., commuting costs, utility fees)

Examples of Documentation to Support Claim:

Evidence of Spill:

- * FOSC report
- * Information on EPA or USCG notification
- * Newspaper reports describing the spill
- * Photos of damaged property (before and after the spill)

General Information for Employee Claims:

- * Statement on how the spill caused a loss in income
- * Affidavit from your employer on the impact on your work or income due to the spill and if the company will be filing a claim for lost profits
- * Copies of pay stubs, receipts, etc., from before, during, and after the spill
- * Personnel records from your employer before, during, and after the spill, showing employment
- * Description of efforts to reduce your loss, including job search
- * Copies of any job-hunting expenses (e.g., travel costs)
- * Signed copies of income tax returns and schedules for at least two years prior to spill
- * Details of employment expenses not paid during period being claimed (e.g., commuting costs)
- * Copies of pay stubs, etc., from alternative employment during time of spill

General Information for Claims by Businesses:

- * Description and documentation of business losses due to spill
- * Copies of letters of business cancellations caused by the spill damage
- * Maps or descriptions of the area showing the business location and the spill impact area
- * Financial statements for at least two years prior to spill and from the year of the spill
- * Signed copies of income tax returns and schedules for at least three years prior to spill
- * Details on efforts to mitigate losses or why no efforts were taken
- * Statement from you or witnesses on how the spill led to loss of income or earning capacity; explain any earnings anomalies
- * For hotels, daily and monthly occupancy information for two years prior to spill and the year of the spill

General Information on Claims by Fishing or Marine Charters:

- * Description of business losses caused by the spill
- * Evidence that vessel(s) were in the area impacted by the spill and were unable to carry on their business due to the spill
- * Maps or descriptions of the area showing business location within spill area
- * Statement from you or witnesses on how the spill caused the loss of income; explain any earnings anomalies
- * Signed copies of income tax returns and schedules for at least three years prior to spill
- * Details on expenses not paid out during period being claimed (e.g., wages)
- * Booking records for three years prior to spill and year of spill
- * List of charter rates, including any services the business specializes in (e.g., sport fishing)
- * Copies of any logs relating to boating activities for the year prior to and the year of the spill
- * Registration documents for the vessel(s), copies of business license, vessel license, fishing license, captain's license

D. Loss of Government Revenue

Loss of Government Revenue: Damages equal to the net loss of taxes, royalties, rents, fees, or net profit shares due to the injury, destruction, or loss of real property, personal property, or natural resources.

Example of a Typical Claim: A city charges fees for parking at a lot near a public beach. The beach is closed while an oil spill is being cleaned. The city may have a claim for loss of revenue during the beach closure.

Eligible Claimant: Federal government, a State, or a political subdivision of a State.

You Must Provide Information Showing:

- * That the loss of revenue was caused by the injury to, destruction of, or loss of real or personal property or natural resources caused by the discharge
- * The amount, identity, and description of the revenue loss for which compensation is claimed, including the applicable authority for collecting the revenue, method of assessment, applicable rate, and dates of collection or periods of loss
- * Expenditures saved because revenue was not collected
- * The total assessment or revenue collected and related expenditures for comparable revenue periods, typically covering two years

Examples of Documentation to Support Claim:

Evidence of Spill:

- * FOSC report
- * Information on EPA or USCG notification
- * Newspaper reports describing the spill
- * Witness(es) statement(s)

General Information:

- * Description of what revenues were impacted and how the spill caused a loss of revenues
- * Copies of statutes, regulations, ordinances, etc., outlining applicable authority to raise such revenues, property affected, method of assessment, rate of assessment, and method and dates of collection of assessment
- * Government financial reports showing total assessment or revenue collected for comparable periods, typically covering two years
- * Details of any expenses not paid out by government during the period being claimed
- * Details and explanation of net loss of revenue

E. Cost of Increased Public Services

Cost of Increased Public Services: “Cost of Increased Public Services” are damages for net costs of providing increased or additional public services during or after removal activities, including protection from fire, safety, or health hazards, caused by a discharge of oil or directly attributable to response to the oil spill incident.

Example of a Typical Claim: You are the manager of a coastal town that must provide emergency traffic control in the vicinity of an OPA incident. The town may have a claim for the costs of providing those emergency services.

Eligible Claimant: State or political subdivision of a State.

You Must Provide Information Showing:

- * Justification for the public services provided, including documentation of what specific services were provided and showing their relationship to the spill
- * When services were provided (during or after the removal activities)
- * Services were in addition to services normally provided
- * Net cost for the services and the methods used to compute those costs

Examples of Documentation to Support Claim:

Evidence of Spill:

- * FOSC report
- * Information on EPA or USCG notification
- * Newspaper reports describing the spill
- * Witness(es) statement(s)

General Information:

- * Reports showing the increased public services were required and if the services were due to fire, health, or safety hazards
- * Detailed description of what increased services were necessary and why, including a distinction between removal activities, safety acts, and law enforcement acts, and if the increase was actually incurred or if normal resources were diverted for use
- * Daily reports on the activities of the government personnel and equipment involved

Government Labor and Equipment Rates:

- * Payroll verification of the government hourly rate at the time
- * Verification of the standard government equipment rates for any equipment claimed
- * Signed and dated records of the spill including hourly rates for labor and equipment
- * Explanation as to whether rates are fully loaded or not and formulas used; states should provide rates under OMB Circular A-87
- * Certification that rates used reflected actual costs incurred and did not include punitive damages or fees

F. Loss of Subsistence Use of Natural Resources

Loss of Subsistence Use of Natural Resources: “Loss of Subsistence Use of Natural Resources” means damages for loss of subsistence use of natural resources which have been injured, destroyed, or lost, without regard to the ownership or management of the resources.

Example of a Typical Claim: You a person whose family subsists on natural resources from a river that is polluted by an OPA incident. You may have a claim for the cost of getting substitute subsistence products.

Eligible Claimant: Anyone who, for subsistence use, actually depends on natural resources that have been injured, destroyed, or lost. It does not matter who owns or manages the natural resources.

NRD Guidelines: Subsistence claims are often unique. A separate Natural Resource Damage Funding Guidelines publication includes subsistence provisions. Those guidelines are available on the NPFC’s Web page:

www.uscg.mil/hq/npfc/nrd.htm

You may also call the NPFC’s toll-free number with claims questions: (800) 280-7118

G. Natural Resource Damages

Natural Resource Damages: Damages for injury to, destruction of, or loss of natural resources, including the reasonable costs of assessing the damage.

Example of a Typical Claim: You are the designated trustee agency for a state wildlife refuge that is oiled from an OPA incident. As trustee, you may have a claim for natural resource damages to cover the costs of assessing injuries and restoring the refuge to its pre-spill condition.

Eligible Claimant: Federal, state, foreign and Indian tribal trustees.

NRD Guidelines: Natural Resource Damage claims are often unique. A separate Natural Resource Damage Funding Guidelines publication is available on the NPFC Web page:

www.uscg.mil/hq/npfc/nrd.htm

You may also call the NPFC's toll-free number with claims questions: (800) 280-7118

H. Claims by a Responsible Party (RP)

Claims by a Responsible Party: OPA Section 1008 (33 U.S.C. 2708) provides that an RP may assert a claim for removal costs and damages only if the RP demonstrates that the RP is entitled to a defense to liability under Section 1003 or to a limitation of liability under Section 1004.

Example of a Typical Claim: You are the owner of a recreational boat that sank after being hit by another vessel. Your vessel caused a gasoline and motor oil spill. If you can prove that the incident was caused solely by the other vessel, you may have a claim for amounts you paid for oil removal costs and damages.

RP Claims Must Show the Following:

- * Documentation addressing each element of the complete defense to liability (33 U.S.C. 2703) or limitation of liability (33 U.S.C. 2704), as applicable
- * That other claimants paid by the RP had presented their claims within OPA's time limits
- * That the RP presented its claim to the NPFC within three years of the date the paid claims were presented to the RP
- * Removal costs and damages for which compensation is requested are included under OPA (33 U.S.C. 2708)
- * That individual claims paid meet the applicable regulatory requirements for claims against the OSLTF
- * If the claim is for costs in excess of your limit of liability you must disclose—
 - > All costs and paid claims (not just those exceeding the limit of liability) and
 - > How those costs and paid claims meet OPA requirements

The NPFC will first evaluate your entitlement to the defense to liability or limitation of liability claimed before taking further action. You will be notified of this determination.

If your entitlement to the limitation of liability or complete defense to liability is upheld, the NPFC will measure the uncompensated removal costs and damages in accordance with the claims regulations for each claim type.

If the claim is for costs in excess of your limit of liability, the NPFC will measure the total acceptable costs for the incident and will deduct the limit of liability amount from the measurement.

KEY DEFINITIONS

Damages. OPA damages means damages to natural resources, to real or personal property, for loss of subsistence use of natural resources, for loss of governmental revenues, for loss of profits or earning capacity, and for increased or additional public services. These damages are specified in Section 1002(b) of OPA and are amplified in Section IV of this guide.

Discharge. Any emission (other than natural seepage), intentional or unintentional, and includes, but is not limited to spilling, leaking, pumping, pouring, emitting, or dumping.

Guarantor. Any person who provides evidence of financial responsibility for an RP under OPA.

Natural Resources. Land, fish, wildlife, biota, air, water, ground water, drinking water supplies, and other such resources belonging to, managed by, held in trust by, appertaining to, or otherwise controlled by the United States (including the resources of the exclusive economic zone), any State or local government or Indian tribe, or any foreign government.

Oil. Oil of any kind or in any form, including petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil, but does not include any substance which is specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of Section 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9601) and which is subject to the provisions of that Act [42 U.S.C. §9601 et seq.].

Oil Spill. An occurrence or series of occurrences having the same origin, involving one or more vessels, facilities, or any combination thereof, resulting in the discharge or substantial threat of discharge of oil into or upon navigable waters of the United States, adjoining shorelines, or the exclusive economic zone (e.g., oil spill in coastal waters from a tanker). A spill that impacts ground water, but not the navigable waters of the U.S., is not an OPA spill.

Removal Costs. The costs of removal that are incurred after a discharge of oil has occurred or, in any case in which there is a substantial threat of a discharge of oil, the costs to prevent, minimize, or mitigate oil pollution from such an incident.

Responsible Party.

In the case of a vessel, any person owning, operating, or demise chartering the vessel;

In the case of an onshore facility (other than a pipeline), any person owning or operating the facility, except a Federal agency, State, municipality, commission, or political subdivision of a State, or any interstate body, that as the owner transfers possession and right to use the property to another person by lease, assignment, or permit;

In the case of an offshore facility (other than a pipeline or a deepwater port licensed under the Deepwater Port Act of 1974 (33 U.S.C. 1501 et seq.)), the lessee or permittee of the area in which the facility is located or the holder of a right of use and easement granted under applicable State law or the Outer Continental Shelf Lands Act (43 U.S.C. 1301-1356) for the area in which the facility is located (if the holder is a different person than the lessee or permittee), except a Federal agency, State, municipality, commission, or political subdivision of a State, or any interstate body, that as owner transfers possession and right to use the property to another person by lease, assignment, or permit;

In the case of a deepwater port licensed under the Deepwater Port Act of 1974 (33 U.S.C. 1501-1524), the licensee;

In the case of a pipeline, any person owning or operating the pipeline; and,

In the case of an abandoned vessel, onshore facility, deepwater port, pipeline, or offshore facility, the persons who would have been responsible parties immediately prior to the abandonment of the vessel or facility.

ACRONYM LIST

CFR	Code of Federal Regulations
EPA	Environmental Protection Agency
FOSC	Federal On-Scene Coordinator (either U.S. Coast Guard or EPA)
NPFC	National Pollution Funds Center
OPA	Oil Pollution Act of 1990 (also known as 33 U.S.C. 2701 et. seq.)
OSLTF	Oil Spill Liability Trust Fund
RP	Responsible Party
U.S.C.	United States Code
USCG	United States Coast Guard

PRIVACY ACT STATEMENT

AUTHORITY: 33 U.S.C. 2713. **PRINCIPAL PURPOSE:** To aid the Coast Guard in adjudicating claims for reimbursement of removal costs and damages from oil spills when the Responsible Party has not paid.

ROUTINE USES: Information on reimbursements may be provided to the Internal Revenue Service for tax purposes and may be provided to the Department of Justice for litigation against the Responsible Party.

DISCLOSURE: Decision to submit a claim is voluntary; but, if proper information is not furnished by the claimant, the Government may be unable to evaluate or pay a claim.

This information applies to all claims against the Oil Spill Liability Trust Fund, whether or not the Optional OSLTF Claim Form is used.

OPTIONAL OSLTF CLAIM FORM — INSTRUCTIONS

Please provide all information, evidence, and documentation that supports the removal costs and/or damage(s) claimed. **Use additional sheets or pages, as necessary,** to provide information, evidence, and documentation. The following numbered paragraphs correspond to the numbers on the optional claim form:

1. Complete name, street, city, state, ZIP and phone number of the claimant (party that incurred damage and is seeking reimbursement).
2. If known, provide the following incident information on the oil spill or threat of oil spill causing or suspected of causing the removal costs and/or damage(s) claimed:
 - * The identity of the vessel, facility or entity causing or suspected of causing the incident.
 - * Describe the geographic area and waterway directly affected by the oil spill or threat of oil spill.
 - * Briefly describe any known information regarding the occurrence of the oil spill or threat of oil spill.
3. Indicate the amounts by the type of claim(s) being submitted. Provide the total amount claimed.
4. Indicate if claimant has had any communication (written or verbal) with the entity causing or suspected of causing the damage(s) claimed.
5. Has the claimant or the claimant's legal representative submitted the claim(s) to the entity causing or suspected of causing the damage claimed? If yes, include the date submitted.
6. If claim was submitted to the responsible party, indicate any response (written or verbal) or any payment you have received. Provide the date the claim was submitted.
7. Indicate if the claimant is pursuing a claim(s) against the responsible party by legal representation in a court of law. If yes, provide all information that will enable us to contact your legal representative and identify your case.

* * **At the bottom of the first page of the form, please initial and date the page.** * *

8. Indicate if claimant is pursuing payment from an insurance carrier for costs that are included in the claim. If yes, provide all information that will enable us to contact the insurer and identify the claimant's policy.
9. Provide detailed information, evidence, and documentation that describes the extent of the damage(s) claimed. Attach copies, if necessary, of all pertinent information.
10. Provide any information, evidence, and documentation that will help describe how the oil spill, or threat of oil spill, caused the removal costs and/or damage(s) claimed.
11. Provide any information, evidence, and documentation that describe the actions of the claimant or any other person on the claimant's behalf to reduce or avoid the damage(s) claimed.
12. Provide the name, address and telephone number (if known) of any witness to the damage(s) claimed. On a separate page provide a summary of each witness's knowledge of the damage(s) claimed or the incident causing or suspected of causing the damage(s) claimed.
13. If you provide additional documents, please list them here or on a separate piece of paper.
14. If the claimant is an individual, that person must sign the claim. If the claimant is a corporation, an officer of the company must sign the claim. All signatures must be in ink to be valid.
15. If the claim is presented by a legal representative, that legal representative must also sign the claim. Provide the complete address and phone number of that legal representative.

Submit your claim, with any necessary information, evidence, and documentation to:

Director (ca)
National Pollution Funds Center
4200 Wilson Blvd., Suite 1000
Arlington, VA 22203-1804

Claims for Natural Resource Damages or for Loss of Subsistence Use of Natural Resources may be addressed to "Director (cn)".

We recommend that you keep the Privacy Act Statement and a copy of the claim for your files.

I, the undersigned, agree that upon acceptance of any compensation from the Fund, I will cooperate fully with the United States in any claim or action by the United States to recover the compensation. The cooperation shall include, but is not limited to, immediately reimbursing to the Fund any compensation received from any other source for the same costs and/or damages and, providing any documentation, evidence, testimony, and other support, as may be necessary for the Fund to recover such compensation.

I, the undersigned, certify that, to the best of my knowledge and belief, the information contained in this claim represents all material facts and is true. I understand that misrepresentation of facts is subject to prosecution under Federal law (including but not limited to 18 U.S.C. 287 & 1001 and 31 U.S.C. 3729).

Oil Pollution Act of 1990

Interim Claims Regulations

The enclosed is the body of the text that was
supplied to the Federal Register by
Commandant.

October 28, 1992

This Page Intentionally Left Blank

List of Subjects

33 CFR Part 135

Advertising, Claims, Continental shelf, Oil pollution.

33 CFR Part 136

Administration practice and procedure, Claims, Oil pollution.

33 CFR Part 137

Claims, Harbors, Insurance, Oil pollution, Reporting and recordkeeping requirements, Vessels.

For the reasons set out in the preamble, the Coast Guard amends 33 CFR Parts 135, 136, and 137 as follows:

PART 135 - OFFSHORE OIL POLLUTION COMPENSATION FUND

1. The authority citation for Part 135 is revised to read as follows:

Authority: 33 U.S.C. 2701-2719; E.O. 12777, 56 FR 54757; 49 CFR 1.46.

2. The heading for Subpart D is revised to read as follows:

Subpart D - Notification of Pollution Incidents

Subpart D [Amended]

3. In Subpart D, remove the undesignated section headings "Notification", "Designation", and "Advertisement".

§ 135.301 [Removed]

4. Section 135.301, Purpose, is removed.

§ 135.303 [Amended]

5. In § 135.303, remove Paragraphs (a)(1) and (a)(2) and redesignate paragraph (a)(3) as an undesignated paragraph.

§ 135.309 through 135.319 [Removed]

6. Sections 135.309 through 135.319 are removed.
7. Part 136 and its authority citation are revised to read as follows:

PART 136 - OIL SPILL LIABILITY TRUST FUND; CLAIMS PROCEDURES;
DESIGNATION OF SOURCE; AND ADVERTISEMENT

Subpart A - General Sec.

- 136.1 Purpose and applicability.
- 136.3 Information.
- 136.5 Definitions.
- 136.7 Foreign claimants.
- 136.9 Falsification of claims.

Subpart B - General Procedure

- 136.101 Time limitation on claims.
- 136.103 Order of presentment.
- 136.105 General requirements for a claim.
- 136.107 Subrogated claims.
- 136.109 Removal costs and multiple items of damages.
- 136.111 Insurance.
- 136.113 Other compensation.
- 136.115 Settlement and notice to claimant.

Subpart C - Procedure for Particular Claims

REMOVAL COSTS

- 136.201 Authorized claimants.
- 136.203 Proof
- 136.205 Compensation allowable.

NATURAL RESOURCES

- 136.207 Authorized claimants.
- 136.209 Proof.
- 136.211 Compensation allowable.

REAL OR PERSONAL PROPERTY

- 136.213 Authorized claimants.
- 136.215 Proof.
- 136.217 Compensation allowable.

SUBSISTENCE USE

- 136.219 Authorized claimants.
- 136.221 Proof.
- 136.223 Compensation allowable.

GOVERNMENT REVENUES

- 136.225 Authorized claimants.
- 136.227 Proof.
- 136.229 Compensation allowable.

PROFITS AND EARNING CAPACITY

136.231 Authorized claimants.

136.233 Proof.

136.235 Compensation allowable.

GOVERNMENT PUBLIC SERVICES

136.237 Authorized claimants.

136.239 Proof.

136.241 Compensation allowable.

Subpart D - Designation of Source and Advertisement

GENERAL

136.301 Purpose.

136.303 Definitions.

DESIGNATION OF SOURCE

136.305 Notice of designation.

163.307 Denial of designation.

ADVERTISEMENT

136.309 Advertisement determinations.

136.311 Types of advertisement.

136.313 Content of advertisement.

AUTHORITY: 33 US.C. 2713,2714; E.O. 12777,(56 FR 54757); 49 CFR 1.46.

Subpart A - General

§ 136.1 Purpose and applicability.

- (a) This part prescribes regulations for --
 - (1) Presentation, filing, processing, settlement, and adjudication of claims authorized to be presented to the Oil Spill Liability Trust Fund (the Fund) under section 1013 of the Oil Pollution Act of 1990 (the Act) (33 US.C. 2713) for certain uncompensated removal costs or uncompensated damages resulting from the discharge, or substantial threat of discharge, of oil from a vessel or facility into or upon the navigable waters, adjoining shorelines, or the exclusive economic zone;
 - (2) Designation of the source of the incident, notification to the responsible party of the designation, and advertisement of the designation and claims procedures; and
 - (3) Other related matters.
- (b) This part applies to claims resulting from incidents occurring after August 18, 1990.
- (c) Nothing in this part --
 - (1) Preempts the authority of any State or political subdivision thereof from imposing any additional liability or requirements with respect to --
 - (i) The discharge of oil or other pollution by oil within such State; or
 - (ii) Any removal activities in connection with such a discharge; or
 - (2) Affects or modifies in any way the obligations or liabilities of any person under the Solid Waste Disposal Act (42 U.S.C. 6901 et seq.) or State law, including common law; or
 - (3) Affects the authority of any State --
 - (i) To establish, or to continue in effect, a fund any purpose of which is to pay for costs or damages arising out of, or directly resulting from, oil pollution or the substantial threat of oil pollution; or
 - (ii) To require any person to contribute to such a fund; or
 - (4) Affects the authority of the United States or any State or political subdivision thereof to impose additional liability or additional requirements relating to a discharge, or substantial threat of a discharge, of oil.

§ 136.3 Information.

Anyone desiring to file a claim against the Fund may obtain general information on the procedure for filing a claim from the Director, National Pollution Funds Center, Suite 1000, 4200 Wilson Boulevard, Arlington, Virginia 22203-1804, (202) 493-6830.

§ 136.5 Definitions.

- (a) As used in this part, the following terms have the same meaning as set forth in sections 1001 and 1007(c) of the Act (33 U.S.C. 2701 and 2707(c)): "claim", "claimant", "damages", "discharge", "exclusive economic zone", "facility", "foreign claimant", "foreign offshore unit", "Fund", "guarantor", "incident", "National Contingency Plan", "natural resources", "navigable waters", "offshore", "facility", "oil", "onshore facility", "owner or operator", "Person", "removal costs", "responsible party", "State", "United States", and "vessel".
- (b) As used in this part
"Act means Title I of the Oil Pollution Act of 1990 (Pub.L. 101-380; 33 U.S.C 2701 through 2719).

"Director, NPFC" means the person in charge of the U.S. Coast Guard National Pollution Funds Center or that person's authorized representative.

'FOSC' means the Federal On-Scene Coordinator designated under the National Contingency Plan or that person's authorized representative.

"NPFC" means the U.S. Coast Guard National Pollution Funds Center, Suite 1000, 4200 Wilson Boulevard, Arlington, Virginia 22203-1804.

§ 136.7 Foreign claimants.

In addition to other applicable limitations on presenting claims to the Fund, claims by foreign claimants to recover removal costs or damages may be presented only when the requirements of section 1007 of the Act (33 U.S.C. 2707) are met.

§ 136.9 Falsification of claims.

Persons submitting false claims or making false statements in connection with claims under this part may be subject to prosecution under Federal law, including but not limited to 18 U.S.C. 287 and 1001. In addition, persons submitting written documentation in support of claims under this part which they know, or should know, is false or omits a material fact may be subject to a civil penalty of up to \$5,000 for each claim. If any payment is made on the claim, the claimant may also be subject to an assessment of up to twice the amount claimed. These civil sanctions may be imposed under the Program Fraud Civil Remedies Act, 31 U.S.C. 3801-3812, as implemented in 49 CFR Part 31.

Subpart B - General Procedure

§ 136.101 Time limitations on claims.

- (a) Except as provided under section 1012(h)(3) of the Act (33 U.S.C. 2712(h)(3)) (minors and incompetents), the Fund will consider a claim only if presented in writing to the Director, NPFC, within the following time limits:
 - (1) For damages, within three years after --
 - (i) The date on which the injury and its connection with the incident in question were reasonably discoverable with the exercise of due care.
 - (ii) In the case of natural resources damages under section 1002(b)(2)(A) of the Act (33 U.S.C. 2702(b)(2)(A)), the date under paragraph (a)(1)(i) of this section, or within three years from the date of completion of the natural resources damage assessment under section 1006(c) of the Act (33 U.S.C. 2706(c)), whichever is later.
 - (2) For removal costs, within six years after the date of completion of all removal actions for the incident. As used in this paragraph, "date of completion of all removal actions" is defined as the actual date of completion of all removal actions for the incident or the date the FOOSC determines that the removal actions which form the basis for the costs being claimed are complete, whichever is earlier.
- (b) Unless the Director, NPFC, directs in writing that the claim be submitted elsewhere, a claim is deemed presented on the date the claim is actually received at the National Pollution Funds Center, Suite 1000, 4200 Wilson Boulevard, Arlington, Virginia 22203-1804. If the Director, NPFC, directs that the claim be presented elsewhere, the claim is deemed presented on the date the claim is actually received at the address in the Commander's directive.

§ 136.103 Order of Presentment.

- (a) Except as provided in paragraph (b) of this section, all claims for removal costs or damages must be presented first to the responsible party or guarantor of the source designated under § 136-305.

- (b) Claims for removal costs or damages may be presented first to the Fund only --
 - (1) By any claimant, if the Director, NPFC, has advertised, or otherwise notified claimants in writing, in accordance with § 136.309(c);
 - (2) By a responsible party who may assert a claim under section 1008 of the Act (33 U.S.C. 2708);
 - (3) By the Governor of a State for removal costs incurred by that State; or
 - (4) By a United States claimant in a case where a foreign offshore unit has discharged oil causing damage for which the Fund is liable under section 1012(a) of the Act (33 U.S.C. 2712(a)).
- (c) If a claim is presented in accordance with paragraph (a) of this section and --
 - (1) Each person to whom the claim is presented denies all liability for the claim; or
 - (2) The claim is not settled by any person by payment within 90 days after the date upon which (A) the claim was presented, or (B) advertising was begun pursuant to § 136.309(d), whichever is later, the claimant may elect to commence an action in court against the responsible party or guarantor or to present the claim to the Fund.
- (d) No claim of a person against the Fund will be approved or certified for payment during the pendency of an action by the person in court to recover costs which are the subject of the claim.

§ 136.105 General requirements for a claim.

- (a) The claimant bears the burden of providing all evidence, information, and documentation deemed necessary by the Director, NPFC, to support the claim.
- (b) Each claim must be in writing for a sum certain for compensation for each category of uncompensated damages or removal costs (as described in Subpart C of this part) resulting from an incident. If at any time during the pendency of a claim against the Fund the claimant receives any compensation for the claimed amounts, the claimant shall immediately amend the claim.
- (c) Each claim must be signed in ink by the claimant certifying to the best of the claimant's knowledge and belief that the claim accurately reflects all material facts.
- (d) In addition to the other requirements of this section, any claim presented by a legal representative of the claimant must also be signed by the legal representative and
 - (1) Be presented in the name of the claimant;
 - (2) Show the title or legal capacity of the representative; and
 - (3) Provide proof of authority to act for the claimant.
- (e) Each claim must include at least the following, as applicable.:
 - (1) The full name, street and mailing addresses of residence and business, and telephone numbers of the claimant.
 - (2) The date, time, and place of the incident giving rise to the claim.
 - (3) The identity of the vessel, facility, or other entity causing or suspected to have caused the removal costs or damages claimed and the basis for such identity or belief.
 - (4) A general description of the nature and extent of the impact of the incident, the costs associated with removal actions, and damages claimed, by category as delineated in Subpart C of this part, including, for any property, equipment, or similar item damaged, the full name, street and mailing address, and telephone number of the actual owner, if other than the claimant.
 - (5) An explanation of how and when the removal costs or damages were caused by, or resulted from, an incident.
 - (6) Evidence to support the claim.
 - (7) A description of the actions taken by the claimant, or other person on the claimant's behalf, to avoid or minimize removal costs or damages claimed.

- (8) The reasonable costs incurred by the claimant in assessing the damages claimed. This includes the reasonable costs of estimating the damages claimed, but not attorney's fees or other administrative costs associated with preparation of the claim.
- (9) To the extent known or reasonably identifiable by the claimant, the full name, street and mailing address, and telephone number of each witness to the incident, to the discharge, or to the removal costs or damages claimed, along with a brief description of that person's knowledge.
- (10) A copy of written communications and the substance of verbal communications, if any, between the claimant and the responsible party or guarantor of the source designated under ' § 136.305 and a statement indicating that the claim was presented to the responsible party or guarantor, the date it was presented, that it was denied or remains not settled and, if known, the reason why it was denied or remains not settled.
- (11) If the claimant has insurance which may cover the removal costs or damages claimed, the information required under § 136.111.
- (12) A statement by the claimant that no action has been commenced in court against the responsible party or guarantor of the source designated under § 136-305 or, if an action has been commenced, a statement identifying the claimant's attorney and the attorney's address and phone number, the civil action number, and the court in which the action is pending.
- (13) In the discretion of the Director, NPFC, any other information deemed relevant and necessary to properly process the claim for payment.

§ 136.107 Subrogated claims.

- (a) The claims of subrogate (e.g., insured) and subrogee (e.g., insurer) for removal costs and damages arising out of the same incident should be presented together and must be signed by all claimants.
- (b) A fully subrogated claim is payable only to the subrogee.
- (c) A subrogee must support a claim in the same manner as any other claimant.

§ 136.109 Removal costs and multiple items of damages.

- (a) A claimant must specify all of the claimant's known removal costs or damages arising out of a single incident when submitting a claim.
- (b) Removal costs and each separate category of damages (as described in Subpart C of this part) must be separately listed with a sum certain attributed to each type and category listed.
- (c) At the sole discretion of the Director, NPFC, removal costs and each separate category of damages may be treated separately for settlement purposes.

§ 136.111 Insurance.

- (a) A claimant shall provide the following information concerning any insurance which may cover the removal costs or damages for which compensation is claimed:
 - (1) The name and address of each insurer.
 - (2) The kind and amount of coverage.
 - (3) The policy number.
 - (4) Whether a claim has been or will be presented to an insurer and, if so, the amount of the claim and the name of the insurer.
 - (5) Whether any insurer has paid the claim in full or in part or has indicated whether or not payment will be made.
- (b) If requested by the Director, NPFC, the claimant shall provide a copy of the following material:

- (1) All insurance policies or indemnification agreements.
- (2) All written communications, and a summary of all oral communications, with any insurer or indemnifier.
- (c) A claimant shall advise the Director, NPFC, of any changes in the information provided under this section.

§ 136.113 Other compensation.

A claimant must include an accounting, including the source and value, of all other compensation received, applied for, or potentially available as a consequence of the incident out of which the claim arises including, but not limited to, monetary payments, goods or services, or other benefits.

§ 136.115 Settlement and notice to claimant.

- (a) Payment in full, or acceptance by the claimant of an offer of settlement by the Fund, is final and conclusive for all purposes and, upon payment, constitutes a release of the Fund for the claim. In addition, acceptance of any compensation from the Fund precludes the claimant from filing any subsequent action against any person to recover costs or damages which are the subject of the compensated claim. Acceptance of any compensation also constitutes an agreement by the claimant to assign to the Fund any rights, claims, and causes of action the claimant has against any person for the costs and damages which are the subject of the compensated claims and to cooperate reasonably with the Fund in any claim or action by the Fund against any person to recover the amounts paid by the Fund. The cooperation shall include, but is not limited to, immediately reimbursing the Fund for any compensation received from any other source for the same costs and damages and providing any documentation, evidence, testimony, and other support, as may be necessary for the Fund to recover from any person.
- (b) Claimant's failure to accept an offer of settlement within 60 days after the date the offer was mailed to the claimant automatically voids the offer. The Director, NPFC, reserves the right to revoke an offer at any time.
- (c) A claimant will be notified in writing sent by certified or registered mail whenever a claim against the Fund is denied. The failure of the Director, NPFC, to make final disposition of a claim within six months after it is filed shall, at the option of the claimant any time thereafter, be deemed a final denial of the claim.
- (d) The Director, NPFC, upon written request of the claimant or of a person duly authorized to act on the claimant's behalf, reconsiders any claim denied. The request for reconsideration must be in writing and include the factual or legal grounds for the relief requested, providing any additional support for the claim. The request must be received by the Director, NPFC, within 60 days after the date the denial was mailed to the claimant or within 30 days after receipt of the denial by the claimant, whichever date is earlier. Reconsideration may only be requested once for each claim denied. The Director, NPFC will provide the claimant seeking reconsideration with written notification of the decision within 90 days after receipt of the request for reconsideration. This written decision is final. The failure of the Director, NPFC, to make final disposition of a reconsideration within 90 days after it is received shall, at the option of the claimant any time thereafter, be deemed a final denial of the reconsideration.

Subpart C - Procedures for Particular Claims

REMOVAL COSTS

§ 136.201 Authorized claimants.

A claim for removal costs may be presented by any claimant.

§ 136.203 Proof.

In addition to the requirements of Subparts A and B of this part, a claimant must establish--

- (a) That the actions taken were necessary to prevent, minimize, or mitigate the effects of the incident;
- (b) That the removal costs were incurred as a result of these actions;
- (c) That the actions taken were determined by the FOSC to be consistent with the National Contingency Plan or were directed by the FOSC.

§ 136.205 Compensation allowable.

The amount of compensation allowable is the total of uncompensated reasonable removal costs of actions taken that were determined by the FOSC to be consistent with the National Contingency Plan or were directed by the FOSC. Except in exceptional circumstances, removal activities for which costs are being claimed must have been coordinated with the FOSC.

NATURAL RESOURCES

§ 136.207 Authorized claimants.

- (a) Claims for uncompensated natural resource damages may be presented by an appropriate natural resources trustee. However, in order to facilitate the processing of these claims with respect to a single incident where multiple trustees are involved and to prevent double recovery, the affected trustees should select a lead administrative trustee who will present consolidated claims on behalf of the trustees.
- (b) A trustee may present a claim for the reasonable cost of assessing natural resources damages separately from a claim for the cost of developing and implementing plans for the restoration, rehabilitation, replacement, or acquisition of the equivalent of the natural resources damaged.

§ 136.209 Proof.

In addition to the requirements of Subparts A and B of this part, a trustee must do the following:

- (a) Submit the assessment and restoration plans which form the basis of the claim.
- (b) Provide documented costs and cost estimates for the claim. Final cost estimates for conducting damage assessments or implementing a restoration plan may form the basis for a claim against the Fund for an uncompensated natural resources damage claim.
- (c) Identify all trustees who may be potential claimants for the same natural resources damaged.
- (d) Certify the accuracy and integrity of any claim submitted to the Fund, and certify that any actions taken or proposed were or will be conducted in accordance with the Act and consistent with all applicable laws and regulations.
- (e) Certify whether the assessment was conducted in accordance with applicable provisions of the natural resources damage assessments regulations promulgated under section 1006(e)(1) of the Act (33 U.S.C. 2706(e)(1)). Identify any other or additional damage assessment regulations or methodology utilized.
- (f) Certify that, to the best of the trustee's knowledge and belief, no other trustee has the right to present a claim for the same natural resources damages and that payment of any subpart of the claim presented would not constitute a double recovery for the same natural resources damages.

§ 136.211 Compensation allowable.

- (a) The amount of compensation allowable is the reasonable cost of assessing damages, and the cost of restoring, rehabilitating, replacing, or acquiring the equivalent of the damaged natural resources.
- (b) In addition to any other provision of law respecting the use of sums recovered for natural resources damages, trustees shall reimburse the Fund for any amounts received from the Fund in excess of that amount required to accomplish the activities for which the claim was paid.

REAL OR PERSONAL PROPERTY

§ 136.213 Authorized claimants.

- (a) A claim for injury to, or economic losses resulting from the destruction of, real or personal property may be presented only by a claimant either owning or leasing the property. (b) Any claim for loss of profits or impairment of earned capacity due to injury to, destruction of, or loss of real or personal property must be included as subpart of the claim under this section and must include the proof required under § 136.233.

§ 136.215 Proof.

- (a) In addition to the requirements of Subparts A and B of this part, a claimant must establish --
 - (1) An ownership or leasehold interest in the property;
 - (2) That the property was injured or destroyed;
 - (3) The cost of repair or replacement; and
 - (4) The value of the property both before and after injury occurred.
- (b) In addition, for each claim for economic loss resulting from destruction of real or personal property, the claimant must establish --
 - (1) That the property was not available for use and, if it had been, the value of that use;
 - (2) Whether or not substitute property was available and, if used, the costs thereof; and
 - (3) That the economic loss claimed was incurred as the result of the injury to or destruction of the property.

§ 136.217 Compensation allowable.

- (a) The amount of compensation allowable for damaged property is the lesser of --
 - (1) Actual or estimated net cost of repairs necessary to restore the property to substantially the same condition which existed immediately before the damage;
 - (2) The difference between value of the property before and after the damage; or
 - (3) The replacement value.
- (b) Compensation for economic loss resulting from the destruction of real or personal property may be allowed in an amount equal to the reasonable costs actually incurred for use of substitute commercial property or, if substitute commercial property was not reasonably available, in an amount equal to the net economic loss which resulted from not having use of the property. When substitute commercial property was reasonably available, but not used, allowable compensation for loss of use is limited to the cost of the substitute commercial property, or the property lost, whichever is less. Compensation for loss of use of noncommercial property is not allowable.
- (c) Compensation for a claim for loss of profits or impairment of earnings capacity under § 136.213(b) is limited to that allowable under § 136.235.

SUBSISTENCE USE

§ 136.219 Authorized claimants.

- (a) A claim for loss of subsistence use of natural resources may be presented only by a claimant who actually uses, for subsistence, the natural resources which have been injured destroyed, or lost, without regard to the ownership or management of the resources.
- (b) A claim for loss of profits or impairment of earning capacity due to loss of subsistence use of natural resources must be included as part of the claim under this section and must include the proof required under § 136.233.

§ 136.221 Proof.

In addition to the requirements of Subparts A and B of this part, a claimant must provide

- (a) The identification of each specific natural resource for which compensation for loss of subsistence use is claimed;
- (b) A description of the actual subsistence use made of each specific natural resource by the claimant;
- (c) A description of how and to what extent the claimant's subsistence use was affected by the injury to or loss of each specific natural resource;
- (d) A description of each effort made by the claimant to mitigate the claimant's loss of subsistence use; and
- (e) A description of each alternative source or means of subsistence available to the claimant during the period of time for which loss of subsistence is claimed, and any compensation available to the claimant for loss of subsistence.

§ 136.223 Compensation allowable.

- (a) The amount of compensation allowable is the reasonable replacement cost of the subsistence loss suffered by the claimant if, during the period of time for which the loss of subsistence is claimed, there was no alternative source or means of subsistence available.
- (b) The amount of compensation allowable under paragraph (a) of this section must be reduced by --
 - (1) All compensation made available to the claimant to compensate for subsistence loss;
 - (2) All income which was derived by utilizing the time which otherwise would have been used to obtain natural resources for subsistence use; and
 - (3) Overheads or other normal expenses of subsistence use not incurred as a result of the incident.
- (c) Compensation for a claim for loss of profits or impairment of earning capacity under ' § 136.219(b) is limited to that allowable under § 136.235.

GOVERNMENT REVENUES

§ 136.225 Authorized claimants.

A claim for net loss of revenue due to the injury, destruction, or loss of real property, personal property, or natural resources may be presented only by an appropriate claimant sustaining the loss. As used in this section and § 136.227, "revenue" means taxes, royalties, rents, fees, and net profit shares.

§ 136.227 Proof.

In addition to the requirements of Subparts A and B, a claimant must establish --

- (a) The identification and description of the economic loss for which compensation is claimed, including the applicable authority, property affected, method of assessment, rate, and method and dates of collection;

- (b) That the loss of revenue was due to the injury to, destruction of, or loss of real or personal property or natural resources;
- (c) The total assessment or revenue collected for comparable revenue periods; and
- (d) The net loss of revenue.

§ 136.229 Compensation allowable.

The amount of compensation allowable is the total net revenue actually lost.

PROFITS AND EARNING CAPACITY

§ 136-231 Authorized claimants.

- (a) A claim for loss of profits or impairment of earning capacity due to the injury to, destruction of, or loss of real or personal property or natural resources may be presented by a claimant sustaining the loss or impairment. The claimant need not be the owner of the damaged property or resources to recover for lost profits or income.
- (b) A claim for loss of profits or impairment of earning capacity that also involves a claim for injury to, or economic losses resulting from destruction of, real or personal property must be claimed under § 136.213.
- (c) A claim for loss of profits or impairment of earning capacity that also involves a claim for loss of subsistence use of natural resources must be claimed under § 136.219.

§ 136.233 Proof.

In addition to the requirements of Subparts A and B of this part, a claimant must establish the following--

- (a) That real or personal property or natural resources have been injured, destroyed, or lost.
- (b) That the claimant's income was reduced as a consequence of injury to, destruction of, or loss of the property or natural resources, and the amount of that reduction.
- (c) The amount of the claimant's profits or earnings in comparable periods and during the period when the claimed loss or impairment was suffered, as established by income tax returns, financial statements, and similar documents. In addition, comparative figures for profits or earnings for the same or similar activities outside of the area affected by the incident also must be established.
- (d) Whether alternative employment or business was available and undertaken and, if so, the amount of income received. All income that a claimant receives as a result of the incident must be clearly indicated and any saved overhead and other normal expenses not incurred as a result of the incident must be established.

§ 136-235 Compensation allowable.

The amount of compensation allowable is limited to the actual net reduction or loss of earnings or profits suffered. Calculations for net reductions or losses must clearly reflect adjustments for --

- (a) All income resulting from the incident;
- (b) All income from alternative employment or business undertaken;
- (c) Potential income from alternative employment or business not undertaken, but reasonably available;
- (d) Any saved overhead or normal expenses not incurred as a result of the incident; and
- (e) State, local, and Federal taxes.

GOVERNMENT PUBLIC SERVICES

§ 136.237 Authorized claimants.

A claim for net costs of providing increased or additional public services during or after removal activities, including protection from fire, safety, or health hazards, caused by a discharge of oil may be presented only by a State or a political subdivision of a State incurring the costs.

§ 136.239 Proof.

In addition to the requirements of Subparts A and B of this part, a claimant must establish--

- (a) The nature of the specific public services provided and the need for those services;
- (b) That the services occurred during or after removal activities;
- (c) That the services were provided as a result of a discharge of oil and would not otherwise have been provided; and
- (d) The net cost for the services and the methods used to compute those costs.

§ 136.241 Compensation allowable.

The amount of compensation allowable is the net cost of the increased or additional service provided by the State or political subdivision. Subpart D - Designation of Source and Advertisement

GENERAL

§ 136.301 Purpose.

This subpart prescribes the requirements concerning designation of the source or sources of the discharge or threat of discharge and advertisement of these designations, including the procedures by which claims may be presented to the responsible party or guarantor.

§ 136.303 Definitions.

As used in this subpart --

"Advertisement" means the dissemination of information, including but not limited to paid advertisements, that are reasonably calculated to advise the public how to present a claim.

"Designated source" means a source designated under § 136.305.

DESIGNATION OF SOURCE

§ 136.305 Notice of designation.

- (a) When information of an incident is received, the source or sources of the discharge or threat are designated, where possible and appropriate. If the designated source is a vessel or facility, the responsible party and the guarantor, if known, are notified by telephone, telefax, or other rapid means of that designation. The designation will be confirmed by a written Notice of Designation.
- (b) A Notice of Designation normally contains, to the extent known --
 - (1) The name of the vessel or facility designated as the source;
 - (2) The location, date, and time of the incident;
 - (3) The type and quantity of oil involved;
 - (4) The date of the designation;
 - (5) The procedures for accepting or denying the designation; and
 - (6) The name, address, telephone number, and, if available, telefax number of the responsible Federal official to whom further communication regarding the incident, advertisement of the incident or denial of designation should be directed.

§ 136.307 Denial of designation.

- (a) Within five days after receiving a Notice of Designation under § 136.305, the responsible party or guarantor may deny the designation.
- (b) A denial of designation must --
 - (1) Be in writing;
 - (2) Identify the Notice of Designation;
 - (3) Give the reasons for the denial and provide a copy of all supporting documents; and
 - (4) Be submitted to the official named in the Notice of Designation.
- (c) A denial is deemed received on the date the denial is actually received by the official named in the Notice of Designation.

ADVERTISEMENT

§ 136.309 Advertisement determinations.

- (a) The Director, NPFC, determines for each incident the type, geographic scope, frequency, and duration of advertisement required.
- (b) In making the determination specified in paragraph (a) of this section, the Director, NPFC may consider --
 - (1) The nature and extent of economic losses that have occurred or are likely to occur;
 - (2) The potential claimants who are likely to incur economic losses;
 - (3) The geographical area that is or will likely be affected;
 - (4) The most effective method of reasonably notifying potential claimants of the designation and procedures of submitting claims; and
 - (5) Relevant information or recommendations, if any, submitted by, or on behalf of, the responsible party or guarantor of the designated source.
- (c) The Director, NPFC, provides the specific requirements for advertisement for each incident to the responsible party or guarantor of the designated source.
- (d) If a responsible party or guarantor has not denied designation in accordance with § 136.307, the party or guarantor shall advertise, in accordance with the requirements of this subpart, the designation and the procedures by which claims may be presented. The advertisement must begin not later than 15 days after the date of the designation made under

§ 136.305.

- (e) If there is no designation under § 136.305, if the source of the discharge or threat is a public vessel, or if the responsible party and guarantor of the source designated have denied the designation or failed to meet the requirements for advertisement in this section, the Director, NPFC, may advertise procedures for presenting claims.

§ 136.311 Types of advertisement.

Advertisement required by the Director, NPFC, will normally include one or more of the following:

- (a) Paid advertisements in a newspaper or newspapers having general circulation in the area designated by the Director, NPFC.
- (b) Notice posted in marinas, marine supply stores, bait and tackle shops, and other appropriate business establishments or public facilities in the area designated by the Director, NPFC.
- (c) News releases to newspapers, radio stations, television stations, and cable services having general circulation in the area designated by the Director, NPFC.
- (d) Other means approved by the Director, NPFC, under the circumstances of each case.

§ 136.313 Content of advertisement.

Each advertisement required by this subpart may be required to contain the following information or to indicate where this information may be contained:

- (a) Location, date, and time of the incident.
- (b) Geographical area affected, as determined by the FOSC or Director, NPFC.
- (c) Type and quantity of oil involved.
- (d) Name or other description of the source designated by the FOSC or Director, NPFC.
- (e) Name of the responsible party and guarantor of the designated source.
- (f) Name, address, telephone number, office hours, and work days of the person or persons to whom claims are to be presented and from whom claim information can be obtained.
- (g) The procedures by which a claim may be presented.
- (h) Other information required by the Director, NPFC, under the circumstances of each case.

PART 137 - DEEPWATER PORT LIABILITY FUND

- 8. The authority citation for Part 137 continues to read as follows:
Authority: 33 U.S.C. 1509(a), 1512(a), 1517(j)(1); 49 CFR 1.46.

Subpart F [Removed and Reserved]

- 9. In Part 137, Subpart F, Claims Procedures, is removed and reserved.

APPLICATION PACKAGE
for
REIMBURSEMENT TO LOCAL GOVERNMENTS

- * Line-By-Line Instructions for Completing Application
- * Application Filing Instructions
- * Application Checklist
- * LGR Application Form (EPA Form 9310-1) (Duplicate as Needed)

**LINE-BY-LINE INSTRUCTIONS
FOR EPA FORM 9310-1,
APPLICATION FOR REIMBURSEMENT TO LOCAL GOVERNMENTS**

Please type or print all sections of the application. If you need more space, please attach additional pages and clearly identify the corresponding line number.

1. Local Government Identification

This section requests basic information about your local government.

Line 1a: Identify the name of your local government (e.g., town, city, county, Indian Tribe).

Line 1b: Indicate the name and daytime telephone number (including area code) of the contact person for this request.

Line 1c: Indicate the official mailing address of your local government. *(EPA will use this address for all correspondence related to this reimbursement.)*

Line 1d: Identify the date that the application for reimbursement is being filed. *(Note: If you are submitting an application more than one year after completing the response, you must attach an explanation.)*

2. Release Description

This section requests basic information about the release incident.

Line 2a: Indicate the date and approximate time the release occurred or was discovered.

Line 2b: Identify the location where the release occurred. *(If a street address is not applicable, please reference major landmarks, surface or drinking water sources, cross streets, or prominent geographic features, as appropriate.)*

Line 2c: Briefly describe the source or cause of the release. *(For example, overturned truck, building or tire fire, abandoned waste, clandestine drug lab.)*

Line 2d: Identify the hazardous substance(s) released and the estimated quantity. *(Be sure to indicate chemical names, when known, and units of measure.)*

Line 2e: Briefly describe the specific threat(s) to human health and the environment represented by the incident. *(For example: health threat posed by leaking cylinders of hydrogen fluoride, a highly*

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

corrosive and fatal hazardous substance when inhaled.)

Line 2f: Attach any additional materials (e.g., police or fire department reports, or sampling results) pertinent to the release. *(This information is not required; however, please attach if readily available.)*

3. Response Description

This section requests basic information about your local government's response to the release incident.

Line 3a: Indicate the date and approximate time when the response was initiated.

Line 3b: If known, please indicate with a check mark whether EPA, the National Response Center, or another agency was notified of the incident. Otherwise, leave this section blank.

Line 3c: If EPA was notified, indicate which Regional Office was contacted. Otherwise, leave this section blank.

Line 3d: Indicate the date and approximate time when the agency identified in Line 3b was contacted.

Line 3e: Indicate the date of response completion. *(An applicant may consider a response complete when all field work has been completed and the local government has received all reports and invoices.)*

Line 3f: Indicate the jurisdiction (e.g., town, city, county, or Indian Tribe) in which the emergency response occurred.

Line 3g: Indicate with a check mark whether your government is a participant in the Title III Emergency Response Plan.

Line 3h: Identify **ALL** agencies involved with the response and their jurisdictions. *(Include any responders from neighboring communities.)*

Line 3i: Briefly summarize all response actions related to the emergency response.

Line 3j: Briefly summarize the temporary emergency response measures that your local government would like to have reimbursed.

4. Cost Information

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

This section requests specific information about the costs incurred during the incident.

Line 4a: Indicate the total amount of local funds spent for the overall response. *(Include all labor, special services, overtime, supplies, and equipment costs incurred by all local responders.)*

Line 4b: Indicate the total amount of funds that your local government is requesting EPA to reimburse.

Line 4c: On Table 1 of the application, provide a detailed breakdown of costs that your local government is requesting EPA to reimburse. In the first column, describe the temporary emergency measures. *(These entries should mirror those identified on Line 3j.)* In the second column, identify the agency that incurred the cost. Use the cost element codes provided in Attachment 1 to complete the third column. In the fourth column, indicate the total dollar amount requested. Please note that supporting documentation (e.g., invoices, sales receipts, rental agreements) must be attached to support each cost provided in Table 1.

Line 4d: On Table 2 of the application, provide a brief summary of your efforts to recover costs from potentially responsible parties, your state, and your local government insurance. In the first column, provide the name and title of the source contacted. In the second column, identify the date(s) those sources were contacted. Provide a brief summary of the response in the third column. In column four, indicate (Yes or No) if you have attached details related to the cost recovery.

Line 4e: Provide any additional financial data that will help EPA in determining your local government's financial burden resulting from the incident. *(This information is not required; however, please attach if readily available.)*

5. Certifications and Authorization

This section requires an authorized signature to certify the information provided on the application.

Your local government's highest ranking official (e.g., mayor, county executive) is required to sign the application. By signing the form, this official certifies that: all costs are accurate and were incurred specifically for this response; this reimbursement request does not supplant local funds normally provided for response; cost recovery was pursued; and if funds received from EPA are later recovered, the reimbursement will be returned to the Agency. *(The highest ranking official of the local government may delegate the authority to sign the application. If a delegate is used, you must enclose a letter of delegation.)*

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

FILING INSTRUCTIONS

When should I submit my application?

A request for reimbursement must be received by EPA within one year of the date of completion of the response. If you submit your application late, you must include an explanation for the delay. Late applications will be considered on a case-by-case basis.

Where should I send my application?

Completed applications and supporting documentation should be sent to:

US EPA
LGR Program Attn. Lisa Boynton
1200 Pennsylvania Ave.
M.C. 5204 - G
Washington, DC 20460

What can I do if my application needs to be amended?

If you file your reimbursement application and later become aware of any changes you must make to the incident or response description or costs incurred, you can send amended information to the address listed above.

What records must I keep?

If you receive a reimbursement from the Superfund, you must keep all records of costs, response activities, and release notifications shown on your application, as well as any worksheets used to figure these costs and the original costs documentation, for a period of three years from the date the reimbursement was made. After three years from the date of reimbursement, if EPA has not begun a cost recovery action against a PRP, you may dispose of your records. You must notify EPA of your intent to dispose of the records 60 days before you do so.

What should I do if my address changes?

If the address provided on Line 1b of the application form changes after you file, please notify the EPA Reimbursement Officer as soon as possible of your address change. This will enable EPA to reach you if additional information or clarification is needed to evaluate your application and will ensure timely receipt of a reimbursement if your application is approved.

Who can I contact if I need more information or help in completing my application?

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

You can call the LGR Helpline at 800-431-9209.

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

APPLICATION CHECKLIST

Before you send this application:

- 9 Make sure that your application form is correct and complete.
- 9 Include receipts, invoices, or other documents to support **ALL** costs being requested for reimbursement.
- 9 Attach all necessary supporting documentation or additional information you want considered.
- 9 Coordinate your application with all other responding agencies and local governments involved in the incident. *Remember, EPA will award only one reimbursement request per incident.*
- 9 Provide an explanation if your request is being filed more than one year after the response was completed.
- 9 Make sure that the highest ranking local government official (or a delegate) signs and dates the application.
- 9 Attach documentation (e.g., a letter of delegation) if the highest ranking local government official delegates the authority to sign the application.
- 9 Make a copy of the completed application (including any attachments) for your files.

Have questions about the program or the application process? Call the LGR HelpLine at 800-431-9209.

Title	Date
<p>Burden Statement:</p> <p>The Agency requires applicants for reimbursement to submit an application package that demonstrates consistency with program eligibility criteria and certifies compliance with the reimbursement requirements. This information collection is necessary to ensure proper use of the Superfund and appropriate distribution of reimbursement awards among applicants. EPA will receive and closely evaluate reimbursement requests in accordance with 40 CFR 310 to ensure that the most deserving cases receive awards.</p> <p>The public reporting and recordkeeping burden for this collection of information is estimated to average 9 hours per response annually. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.</p> <p>Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, OPPE Regulatory Information Division, U.S. Environmental Protection Agency (2137), 401 M St., S.W., Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.</p>	

highest ranking official of the local government requesting reimbursement, or signed by the authorized representative indicated in an enclosed letter delegating signature authority for this application process.

ATTACHMENT 1 TO FORM 9310-1 COST ELEMENT CODES AND COMMENTS
[Cost Element Codes for use in Table 1]

Code	Cost category	Cost element	Comments
PC	Personnel Compensation.	PC1: Overtime—for services in excess of the local agency's standard work day or work week. PC2: Experts and consultants—for services rendered on a per diem or fee basis or for services of an intermittent, advisory nature.	Compensation of overtime costs incurred specifically for a response will be considered only if overtime is not otherwise provided for in the applicant's operating budget.
TR	Transportation	TR1: Passenger vehicle rental—for transportation of persons during evacuation. TR2: Nonpassenger vehicle rental—for transportation of equipment or supplies.	Passenger and nonpassenger vehicle rental costs will be considered for private vehicles not owned or operated by the applicant or other unit of local government.
RC	Utilities	RC1: Utilities—for power, water, electricity and other services exclusive of transportation and communications.	Utility costs will be considered for private utilities not owned or operated by the applicant or other unit of local government.
OS	Other Contractual Services.	OS1: Contracts for technical or scientific analysis—for tasks requiring specialized hazardous substance response expertise. OS2: Decontamination services—for specialized cleaning or decontamination procedures and supplies to restore clothing, equipment or other serviceable gear to normal functioning.	May include such items as specialized laboratory analyses and sampling.
SM	Supplies and Materials.	SM1: Commodities—for protective gear and clothing, cleanup tools and supplies and similar materials purchased specifically for, and expended during, the response.	May include such items as chemical foam to suppress a fire; food purchased specifically for an evacuation; air purifying canisters for breathing apparatus; disposable, protective suits and gloves; and sampling supplies.
EQ	Equipment	EQ1: Replacement—for durable equipment declared a total loss as a result of contamination during the response. EQ2: Rent—for use of equipment owned by others.	Equipment replacement costs will be considered if applicant can demonstrate total loss and proper disposal of contaminated equipment. Equipment rental costs will be considered for privately owned equipment not owned or operated by the applicant or other unit of local government.
